1. PURPOSE OF REQUEST FOR PROPOSALS

The purpose of this Request for Proposals (RFP) is to select a Proposer to perform the Project services described in this RFP. SCDOT desires that this Project be constructed in a very efficient and timely manner. The proposed Project services are hereinafter referred to as the “Project”. “Proposer,” as used here, includes a firm or firms, consortia, partnerships, limited liability corporation, sole proprietorship, joint ventures, and other legal entities, which have been requested by South Carolina Department of Transportation (SCDOT) to submit a Proposal in response to this RFP. Partnerships, corporations, limited liability corporations (LLC), joint ventures, or other joint entities are collectively referred to herein as joint ventures. The Proposer shall become the Contractor if awarded the Contract.

It is not the intention of SCDOT to receive complete detailed Project analysis and design prior to the selection of a Proposer and the later execution of an agreement. Rather, the response to this RFP shall provide sufficient information to be evaluated by SCDOT to determine if the Proposal is in accordance with the specified process and criteria. The Proposal shall be specific enough on assumptions used in its preparation so as to provide the basis for determining a final agreement.

If Proposer accepts a stipend, all information obtained under this RFP will become the property of SCDOT without restriction or limitation on its use, including Alternative Technical Concepts (ATCs). SCDOT shall have unrestricted authority to publish, disclose, distribute, or otherwise use in whole or in part any reports, data, or other materials prepared under this RFP. SCDOT shall retain ownership of all plans, specifications, and related documents. If a Proposer elects not to accept the stipend, Proposer’s ATCs may remain the property of Proposer.

2. PROJECT OVERVIEW

2.1 Project Description

SCDOT proposes to construct a new exit ramp to US 378 from I-26 eastbound and associated interstate widening in Lexington County and a full access interchange at Colonial Life Boulevard at I-126 in Richland County. This will include construction of new bridges and related roadway approaches. The purpose of the project is to provide traffic access to and from I-26 and I-126 to Colonial Life Blvd., allowing for closure of the existing on and off ramps that access I-26 from Bush River Road. The project includes constructing a westbound bridge and roadway approach for a ramp on new alignment along I-26 westbound over the Saluda River. The project also includes a new ramp bridge over CSX Railroad. The project will also include realignment of frontage and side roads. The project also includes coordination, design and relocation of utilities.

SCDOT intends to enter into a contract for services as detailed in the Agreement and Agreement Exhibits. The Proposer shall be responsible for meeting all Project requirements, specifications, and other applicable criteria as set forth in “Attachments A and B”. Attachment B - Supplemental Project Design Criteria is located on the SCDOT

Design-Build website at <https://www.scdot.org/business/carolina-crossroads-phase1.aspx>.

2.2 Project Information

Project Information, containing electronic files applicable to the Project, will be posted on the SCDOT Design-Build website. The Project Information Package will include information describing the work performed or obtained by SCDOT prior to entering into the contract for the Project. The Project Information Package may contain additional information not provided at the RFQ stage. The Project Information Package, which is posted on the SCDOT Design-Build website, is for information only and is not part of the Contract. SCDOT makes no representations or warranties regarding the reliability or accuracy of the information contained therein. Any available existing roadway plans can be obtained from the SCDOT Design-Build website at <https://www.scdot.org/business/design-build.aspx>. Any available existing bridge plans will be provided to the short-listed Proposers via upload to a secured ProjectWise folder.

Proposers are responsible for reviewing all available information in the Project Information Package, visiting the Project site, and making any additional subsurface explorations or soil tests that the Proposer may desire for purposes of preparing the Proposal. Any information contained in Project Information Package is for information only, is not part of the contract and SCDOT makes no representation or warranties regarding such information. The Proposer shall obtain any permits or permissions required prior to any additional subsurface exploration. The Proposer shall obtain permission from any landowner prior to entering private property. The Proposer shall obtain encroachment permits for any investigations within the right of way.

2.3 SCDOT Point of Contact

Mr. Nick Pizzuti is the Primary point of contact (POC) and addressee for receiving all communications about the Project with copies to Ms. Barbara Wessinger, Alternate #1 POC, and Mr. Brad Reynolds, Alternate #2 POC. The Alternate POCs have been identified in the event of the unavailability of the Primary POC but are not intended to be substitutes for the Primary POC. No contact is allowed with any SCDOT personnel concerning this Project except for questions of an administrative or contractual nature that shall be submitted in writing to the attention of the Primary SCDOT POC (email is acceptable) with a copy to the Alternate POCs. This restriction is in effect until the contract has been awarded. Any Proposer engaging in prohibited communications may be disqualified at the sole discretion of SCDOT. Written inquiries from the Proposer's POC (as identified in the Proposer's SOQ) shall be sent to:

Mail Delivery: Mr. Nick Pizzuti
(Ms. Barbara Wessinger, Mr. Brad Reynolds)
Office of Professional Services Contracting
(Office of Chief Counsel, Preconstruction Design-Build Group)
South Carolina Department of Transportation

E-mail: 955 Park Street, Room 128 (Room 302, 421)
Columbia, South Carolina 29202-0191
PizzutiNC@scdot.org
(WessingBM@scdot.org, ReynoldsBS@scdot.org)

2.4 RFP Committal

The submittal of a Proposal in response to this RFP shall constitute the Proposer's agreement to enter into a contract with SCDOT for the completion of the Project under the terms set forth in the Agreement and Agreement Exhibits attached hereto as "Attachment A".

2.5 NEPA Document/Permit

A combined Final Environmental Impact Statement (FEIS) / Record of Decision (ROD) was approved for the Carolina Crossroads Project by the Federal Highway Administration (FHWA) on May 2, 2019 and Re-evaluation dated August 3, 2020. The Proposer shall be responsible for complying with the NEPA determination and environmental commitments as further outlined in the Agreement and Exhibits.

The acquisition of all necessary permits will be the responsibility of the Proposer. SCDOT is obtaining the mitigation credits to be used for this project.

2.6 Interchange Justification Report/Interchange Modification Report

The IMR was approved by FHWA on May 2, 2019 . A single approved Interchange Modification Report (IMR), in accordance with FHWA, will be provided for the System to System Interchanges (I-20 and I-26), (I-26 and I-126) and their adjacent interchanges including I-20 and Bush River Road, I-20 and Broad River Road, I-26 and Bush River Road, I-126 and Colonial Life Blvd., I-26 and St. Andrews, and I-26 and Piney Grove Road. The IMR documents will be provided on the SCDOT Design-Build website in advance of the Final RFP. The traffic analysis documented in the IMR was completed with the Transmodeler 4.0 (Build 6275) software. The electronic files associated with the IMR analysis will also be provided on the SCDOT Design-Build website in advance of the Final RFP. Proposers are responsible for any IMR or Transmodeler modifications necessary to revise the approved IMR.

3. GENERAL INSTRUCTIONS

3.1 Design-Build Selection Method

For this Design-Build Project, SCDOT chose the two-phased selection method. Phase 1, which identified a short-list of qualified Proposers, is complete.

In Phase 2, SCDOT will invite each of the short-listed Proposers to submit their Proposals for completion of the Project. After evaluation of the Proposals, SCDOT plans to award and execute a contract with a single Proposer. A general overview of Phase 2 includes, but is not limited to, the following steps:

1. SCDOT releases RFP for Industry Review
2. SCDOT holds Open-Forum Meeting with Proposers to clarify/revise RFP
3. SCDOT releases Final RFP
4. Proposers submit Preliminary Alternative Technical Concepts (ATC) and Confidential Questions
5. SCDOT conducts Confidential One-on-One Meetings with Proposers to discuss Preliminary ATCs and Confidential Questions
6. SCDOT accepts Non-confidential Questions and conducts Open-Forum Meetings with all Proposers, if necessary
7. Proposers submit Formal ATCs and any additional Confidential Questions
8. SCDOT conducts Confidential One-on-One Meetings with Proposers to discuss Formal ATCs and additional Confidential Questions, if necessary
9. SCDOT accepts Non-confidential Questions and conducts Open-Forum Meetings with all Proposers, if necessary
10. SCDOT approves/disapproves ATCs
11. Proposers submit Proposals
12. SCDOT evaluates Proposals
13. SCDOT selects a Contractor

These steps will be carried out following the Milestone Schedule in Section 8. SCDOT reserves the right to make changes to the above steps as appropriate to meet the needs of the procurement process. The following paragraphs provide information detailing various steps of the process.

3.2 RFP for Industry Review

The intent of the RFP for Industry Review is to identify and resolve conflicts, mistakes, and/or ambiguities in the RFP.

3.3 Non-Confidential Questions, Clarifications, and Open-Forum Meeting

Once the RFP for Industry Review is issued, the Proposers may submit non-confidential questions and/or comments relating to the RFP. An Open-Forum Meeting with all Proposers present will be held on the date provided in the Milestone Schedule to discuss and edit the RFP for Industry Review. Non-confidential questions will be accepted via electronic upload to ProjectWise on the dates provided in the Milestone Schedule. Proposers shall submit their questions or comments using the Questions Submittal Form which can be downloaded from the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section.

All Question Submittal Forms shall be named in accordance with the Design-Build File Naming Conventions from the SCDOT Design-Build website under the Design-Build Resources Section.

<https://www.scdot.org/business/design-build.aspx>

SCDOT reserves the right to accept or reject non-confidential questions received after the milestone deadline. SCDOT will review all questions and/or requests for clarification and, in its sole discretion, may incorporate them in the Final RFP. SCDOT will endeavor to provide oral answers during the Open-Forum Meeting to the questions received. SCDOT's oral answers to Proposers' questions are for general information only, are non-binding, do not constitute legal or other advice, and do not amend or form part of the Final RFP.

3.4 Final RFP

After completion of the Questions, Clarifications, and Open-Forum Meeting stage, SCDOT may incorporate the Proposers' comments into the RFP, and a Final RFP will be issued. Items that are revised, inserted, or deleted will be highlighted in the Final RFP. In addition to releasing a highlighted version of the Final RFP, SCDOT will also concurrently release a clean version of the Final RFP where all revisions, insertions, and deletions are not highlighted. It is this clean version of the Final RFP that will be utilized if any future Addendums are required.

3.5 Additional Non-confidential Questions, Clarifications and Open-Forum Meetings

Once the Final RFP is issued, SCDOT will allow Proposers to submit additional non-confidential questions or comments to point out mistakes or ambiguities in the RFP. SCDOT will review all non-confidential questions and/or requests for clarification and, in its sole discretion, may incorporate them in the RFP through an Addendum.

SCDOT may elect, in its sole discretion, to orally respond to the non-confidential questions received. If responses are provided, it will be orally through an Open-Forum Meeting where all Proposers will be invited to attend. This meeting may be conducted via conference call. A Proposers' failure to attend this meeting will not relieve the Proposer of the responsibility for estimating properly the difficulty and cost of successfully performing the work, or for proceeding to successfully perform the work without additional expense to SCDOT. SCDOT's oral responses to Proposers' questions are for general information only, are non-binding, do not constitute legal or other advice, and do not amend or form part of the Final RFP. Written responses to any questions will not be provided.

Non-confidential questions will be accepted via electronic upload to ProjectWise on the dates provided in the Milestone Schedule. Written questions submitted outside of these dates may not be accepted. If deemed necessary by SCDOT, Open-Forum Meetings will be held within 10 business days of the non-confidential questions Milestone Schedule

deadline. Proposers must use the Question Submittal Form that is provided on the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section.

<https://www.scdot.org/business/design-build.aspx>.

3.6 Confidential Questions

Once the Final RFP is issued, SCDOT will allow Proposers to submit confidential questions to provide the Proposer an opportunity to confidentially discuss the contents of his/her Proposal with SCDOT personnel. Confidential questions will be accepted via electronic upload to ProjectWise on the dates identified in the Milestone Schedule. Written questions submitted outside of these dates may not be accepted.

SCDOT will determine, in its sole discretion, if confidential questions submitted are considered confidential. If more than one confidential question on the same topic has been received from multiple Proposers, SCDOT has the right to revise the RFP to include that concept as an addendum to the RFP. If submitted confidential questions are determined to be of non-confidential nature or identify an error or omission in the RFP, SCDOT, if it deems appropriate, in its sole discretion, may incorporate them in the RFP through an Addendum.

SCDOT may orally respond to the submitted confidential questions during the Confidential Preliminary ATC Meeting and/or any Confidential One-on-One Formal ATC Meetings. SCDOT's oral responses to Proposers' questions are for general information only, are non-binding, do not constitute legal or other advice, and do not amend or form part of the Final RFP. Written responses to confidential questions may be provided if deemed necessary during discussions at the meeting; however, such questions and answers will be identified and narrowly tailored. No oral discussions during the Confidential Preliminary ATC Meeting and/or any Confidential One-on-One Formal ATC Meetings shall be binding on SCDOT.

Confidential questions received on the dates prior to the Confidential Preliminary ATC Meetings with Proposers may be discussed at that meeting. For confidential questions received on the allowable date(s) after the Confidential Preliminary ATC Meeting, oral answers may be provided during a Confidential One-on-One Questions Meeting/conference call which may be held within 10 business days following receipt of the confidential questions or as determined necessary by the SCDOT POC. Proposers must use the Question Submittal Form that is provided on the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section.

<https://www.scdot.org/business/design-build.aspx>.

3.7 Preliminary Alternative Technical Concepts

An ATC is a confidential request by a Proposer to modify a contract requirement, specifically for that Proposer, prior to the Proposal due date. Requests for contract modifications that may qualify as ATC's may include, but not be limited to, changes in

design criteria, changes in alignments or location of facilities, changes to review and submittal processes, change in material or structure types, change in interchange type, etc. The ATC process provides an opportunity for design-build Proposals to promote innovation, find the best solutions, and to maintain flexibility in the procurement process. ATCs are evaluated by SCDOT within the deadline set forth in the Milestone Schedule. In order to be approved, an ATC must be deemed, in SCDOT's sole discretion, to provide a Project that is equal or better in quality or effect on an overall basis than the Project would be without the proposed ATC. Concepts that simply delete scope, lower performance requirements, lower standards, conflict with environmental commitments, or reduce contract requirements are not acceptable as ATCs. SCDOT reserves the right, in its sole discretion, to reject any ATC. No ATC shall be included in the Proposal unless approved by SCDOT in writing prior to the Proposal submission deadline. As the environmental determination has been made for this Project, the following shall be used during the development of proposals and ATCs:

- Concepts which violate environmental commitments require submittal and approval of an ATC to be eligible for implementation.
- If the environmental determination for the Project identified a selected alternative:
 - a. Shifts in the selected alternative alignment that stay within the proposed right of way limits presented in the document and do not increase the environmental impacts are permissible without the submission of an ATC, provided all other RFP requirements are met;
 - b. Shifts in the selected alternative alignment that stay within the proposed right of way limits presented in the document but increase the environmental impacts require submittal and approval of an ATC to be eligible for implementation;
 - c. Any shift in the selected alternative outside the proposed right of way limits presented in the document will require submittal and approval of an ATC to be eligible for implementation.
- If changes to the interchange are proposed, an ATC shall be submitted under the following situations:
 - a. Changes to the interstate access (with or without a change in interchange type) shall assess the merge/diverge/weaving section operation along the mainline and/or C-D roads.
 - b. Changes to the interchange type (with or without a change in interstate access) shall provide additional operational analyses to assess off-ramp queuing, operation of ramp termini intersections, and operation of the interchange arterial roadways to the intersections adjacent to the ramp termini intersections.

In either of cases above where changes in interstate access and/or interchange type occur, the objective is for the Proposer to demonstrate that their concepts provide an equivalent or better operation than that of the comparable locations contained within the Modified Selected Alternative. Additionally, the Proposer would need to demonstrate that the changes to interstate access and/or interchange type would not result in vehicles re-routing to other service

interchanges through the system interchange. Under these conditions, updating or revising the System IMR should not be necessary or required to gain operational acceptance to the interchange since no impacts to the I-20/I-26 or I-26/I-126 system interchange would occur.

- c. Changes to the interchange that influence the system interchanges. Any modifications to the Modified Selected Alternative condition at the system interchanges proposed by the Proposer may require a revision to the system IMR to gain operational acceptance.

3.7.1 Submittal of Preliminary ATCs

Preliminary concepts are intended to be an informal inquiry by the Proposer to explore a concept and a quick method by SCDOT to review and comment on potential development of ATCs prior to investment of time and resources by the Proposer. Preliminary concepts shall present a Description, Deviations, and a range of Costs, as further described in Section 3.8.1. Other items identified in Section 3.8.1 can be provided, but are not required. The amount of information provided shall be constrained to the boxes provided in the Preliminary ATC Submittal Form. SCDOT will allow one single tabloid sized attachment (11" x 17") for detailed drawings or sketches. Submission of preliminary concepts does not change or extend the submission deadline of Formal ATCs.

Proposers shall be limited to one package of preliminary concepts and the total number of preliminary concepts shall not exceed 25. If more than one preliminary concept on the same topic has been received from multiple Proposers, SCDOT has the right to revise the RFP to include that concept as an addendum to the RFP.

All Preliminary ATCs shall be submitted electronically by uploading to the 01 ATC folder in ProjectWise. Each Preliminary ATC Submittal Form and supporting information shall be combined in one PDF file per ATC that will be uploaded to ProjectWise. The Preliminary ATC Submittal Form can be downloaded from the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section. When uploading to ProjectWise, the Proposer shall enter appropriate attributes for each document in the upload wizard. The document will not upload without entering the required attribute information.

<https://www.scdot.org/business/design-build.aspx>.

The Proposer shall submit Preliminary ATCs for review in accordance with the Milestone Schedule. All Preliminary ATC information being exchanged between Proposers and SCDOT shall occur only on the specific dates shown, unless otherwise directed by the SCDOT POC.

3.7.2 Confidential Preliminary ATC Meeting

SCDOT will offer Confidential Preliminary ATC Meetings at the request of the Proposers. Proposers shall request a meeting in writing (email is acceptable)

addressed to the SCDOT POC with a copy to the alternate POC's by the date specified in the Milestones Schedule. SCDOT will reserve two hours of meeting time for each Proposer that requests a meeting, and SCDOT will give time of day preference in the order that requests are received. The purpose of this meeting is to provide an opportunity to confidentially discuss the preliminary ATCs and questions. Prior to the meeting, SCDOT will provide a tentative response on each preliminary ATC. SCDOT will identify those preliminary ATCs that require additional information, which will have priority in the meeting. SCDOT may answer questions at the meeting verbally. Verbal responses are for information only and are not binding. Nothing discussed at this meeting shall change the requirements in the RFP.

3.7.3 Responses to Preliminary ATCs

SCDOT will provide a response to the Proposer in accordance with the Milestone Schedule. SCDOT responses will be "Favorable," "Not Favorable," "Addendum," or "Not an ATC." If additional clarification is needed after the Preliminary ATC Meeting, Proposers are responsible for sending the clarification as soon as possible so that SCDOT has an opportunity to assess the benefits of the concepts before providing a response in accordance with the Milestone Schedule. A favorable response by SCDOT in no way guarantees that the concept will become an approved formal ATC. The favorable response may be subject to conditions.

3.8 Formal Alternative Technical Concepts

3.8.1 Submittal of Formal ATCs

Each formal ATC submittal shall include the following.

- **Description:** A detailed description and schematic drawings of the configuration of the ATC or other appropriate descriptive information (including, if appropriate, specifications, construction tolerances, special provisions, proposed bridge types, product details, and a traffic operational analysis). Drawings shall clearly indicate what is specifically proposed for this project. Samples/Examples from other projects may be used but specific commitments shall be identified for this project (i.e. member sizes, material requirements, etc. Specification and special provisions shall be supplied if the ATC covers materials, products, etc. not commonly used by SCDOT and not covered in the RFP package or references. Traffic analysis shall provide adequate information to clearly demonstrate the impacts of the proposal on the project and shall contain summaries where appropriate to aid in review.
- **Usage:** Locations where and an explanation of how the ATC would be used on the Project.
- **Deviations:** Clearly identify the sections and page numbers in the RFP which is deviated and requires submission of an ATC. Include an explanation of the nature of the proposed deviation and a request for approval of such deviations

or a determination that the ATC is consistent with the requirements of the RFP. If consistent with the RFP, please provide the sections and page numbers in the RFP which address the concept.

- **Justification:** Justify use of the ATC and why the deviations from the requirements of the RFP should be allowed.
- **Schedule:** Proposed changes to the Project schedule if applicable. If early delivery is proposed, proposer shall clearly define any proposed liquidated damages or effect to contract if early date is not met.
- **Impacts:** Identify potential impacts on vehicular traffic, safety, community, utilities, right of way, and the environment.
- **History:** A detailed description of other projects where the ATC has been used under comparable circumstances, the success of such usage, and names and telephone numbers of project owners that can confirm such statements.
- **Risks:** A description of added risks to SCDOT and other persons/entity associated with implementing the ATC.
- **Costs:** An estimate of the impact of the ATC on the Proposal Price and the ATC implementation costs to SCDOT, FHWA, Contractor, or other person during construction, maintenance and operations.
- **Quality:** A description of how the ATC is equal or better in quality and performance than the requirements of the RFP.
- **Operations & Maintenance:** Any changes in operation or maintenance requirements associated with the ATC.

The technical response to each item outlined above shall be provided in the Formal ATC Submittal Form. Text submissions shall be limited to the form and shall not be provided as attachments. Only drawing details, plan sheets, charts, tables, graphs, specifications, special provisions, manufacturer data sheets, and supporting reports/analyses can be provided as an attachment to the Formal ATC Submittal Form.

A maximum number of 15 formal ATCs may be submitted to SCDOT by the Proposer for consideration. Only two of the 15 ATCs may be different interchange types.

All Formal ATCs shall be submitted electronically by uploading to the 01 ATC folder in ProjectWise. Each Formal ATC Submittal Form and supporting information shall be combined in one PDF file per ATC that will be uploaded to ProjectWise. The Formal ATC Submittal Form can be downloaded from the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section. When uploading to ProjectWise, the Proposer shall enter appropriate attributes for each document in the upload wizard. The document will not upload without entering the required attribute information.

<https://www.scdot.org/business/design-build.aspx>

The Proposer shall submit Formal ATCs in accordance with the Milestone schedule. All information being exchanged between Proposers and SCDOT shall occur only on the specific dates shown, unless otherwise directed by the SCDOT POC.

3.8.2 Review of Formal ATCs

Review of formal ATCs shall be in accordance with the information and Milestone Schedule provided herein.

- a. Initial Review: Upon completion of the initial review, SCDOT will make a final determination in accordance with Section 3.8.3, request more information, or provide a conditional response.
- b. More Information Needed: SCDOT may submit written questions to the Proposer as outlined in the Milestone Schedule, and/or request a one-on-one meeting in order to better understand the details of the formal ATC. In addition, for questions related to minor clarifications, SCDOT may submit written questions to the Proposer anytime during the initial review or any subsequent review. Proposers will then have the opportunity to resubmit according to the Milestone Schedule.
- c. One-on-One Meetings: Confidential One-on-One Formal ATC meeting(s) may be scheduled to fully understand the details of any formal ATCs. These meetings will be restricted to those persons involved in the review of the formal ATC and limited to discussions of the Proposer's formal ATC approach and any outstanding confidential questions. The purpose of this meeting is to discuss proposed changes, answer questions, and other relevant issues. Verbal responses are for information only and are not binding. Nothing stated at any formal ATC meeting(s) will modify the RFP or Contract Documents. SCDOT reserves the right to disclose to all Proposers any issues raised during the ATC meeting(s) in an addendum. However, SCDOT will not disclose any information pertaining to an individual Proposer's ATCs or other technical concepts to other Proposers.
- d. Conditional Response by SCDOT: If the SCDOT states a formal ATC is not approved in its present form, it may be reconsidered for approval upon satisfaction, in SCDOT's sole discretion, of certain identified conditions that must be met or certain clarifications or modifications that must be made by Proposer. The Proposer shall not have the right to incorporate this formal ATC into the Proposal unless and until the formal ATC has been resubmitted in accordance with the Milestone Schedule, with the conditions, clarification and modifications satisfied, and SCDOT has made a final determination.
- e. Response from SCDOT: If the Proposer does not receive correspondence from SCDOT in accordance with the Milestone Schedule, the formal ATC is

deemed rejected by SCDOT, unless written notification to extend this period is given by SCDOT.

3.8.3 Final Determination of SCDOT

SCDOT will make one of the following written determinations with respect to each properly submitted ATC:

- a. The ATC is approved.
- b. The ATC is not approved.
- c. The submittal does not qualify as an ATC but appears eligible to be included in the Proposal without an ATC (i.e., the concept appears to conform to the RFP and to be consistent with other contract requirements).
- d. The ATC is deemed to take advantage of an error or omission in the RFP, or other documents incorporated into the contract by reference, the ATC will not be considered, and the RFP will be revised to correct the error or omission.
- e. More than one formal ATC has been received on the same topic and SCDOT has elected to exercise its right to issue an addendum to the RFP to include that topic.

Once an ATC has been approved, only the entire ATC is eligible for inclusion into the Proposal. The inclusion of partial ATCs into a Proposal is not allowed, unless the individual ATCs have received separate approval by SCDOT.

Each Proposer, by submittal of its Proposal, acknowledges that the opportunity to submit ATCs was offered to all Proposers, and waives any right to object to SCDOT's determinations regarding acceptability of ATCs.

All Formal ATCs shall be submitted electronically by uploading to the 01 ATC folder in ProjectWise. Each Formal ATC Submittal Form and supporting information shall be combined in one PDF file per ATC that will be uploaded to ProjectWise. The Formal ATC Submittal Form can be downloaded from the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section. When uploading to ProjectWise, the Proposer shall enter appropriate attributes for each document in the upload wizard. The document will not upload without entering the required attribute information.

<https://www.scdot.org/business/design-build.aspx>.

The Proposer shall submit Formal ATCs in accordance with the Milestone schedule. All information being exchanged between Proposers and SCDOT shall occur only on the specific dates shown, unless otherwise directed by the SCDOT POC.

3.8.4 Incorporation into Proposal

A Proposer has the option to include any or all approved ATCs in its Proposal. If SCDOT responded to an ATC by identifying conditions for approval, Proposer may not incorporate such ATC into the Proposal unless all conditions have been met. Copies of SCDOT's ATC approvals, which shall include the ATC Summary Form for each incorporated ATC, shall be included in the Technical Proposal appendices. Proposals with or without ATCs will be evaluated against the same technical evaluation factors set forth in the Evaluation of Proposals section, and the inclusion of an ATC, including an ATC that provides technical enhancements, may or may not receive a higher technical rating. SCDOT approval of an ATC shall not be considered a guaranty that the Proposal incorporating the ATC will be selected. SCDOT's rejection of an ATC will not entitle the Proposer to an extension of the Proposal submission deadline on the Milestone Schedule or claim for additional costs or delays, including development costs, loss of anticipated profits, or increased material or labor costs. The Total Cost to Complete shown in the Cost Proposal shall reflect any incorporated approved ATCs. Except for incorporating approved ATCs, the Proposal may not otherwise contain exceptions to or deviations from the requirements of the RFP.

3.8.5 Value Engineering

An approved ATC that is not incorporated into the Proposal will not be considered a pre-approved value engineering change.

3.8.6 Abandonment of ATC by Proposer

If the approved ATC is abandoned by the Proposer, is unable to obtain required approvals, is otherwise proved to be infeasible, or fails to be constructed for any reason, the successful Proposer is obligated and required to complete the Project utilizing the original RFP requirements at the awarded cost, and shall be responsible for any redesign costs.

3.8.7 SCDOT's use of Concepts Contained in an ATC

SCDOT expressly reserves the right to adopt and use any ATC, approved or disapproved, by the successful Proposer on this contract or other contracts administered by SCDOT. By submitting a Proposal, all unsuccessful Proposers acknowledge that upon acceptance of the designated stipend, all approved or disapproved ATCs may be included in this contract or other contracts administered by SCDOT and shall become the property of SCDOT without restriction on use. Prior to contract execution, limited negotiations may be conducted as necessary to incorporate the ideas and concepts from unsuccessful Proposers, provided a stipend is accepted by the unsuccessful Proposer. After execution of the Contract, all ATCs from Proposers who have accepted a stipend will be subject to FOIA.

3.8.8 Proposer Obligations

The successful Proposer, in addition to performing all other requirements of the Contract Documents, shall:

- a. Obtain and pay the cost of obtaining all required approvals including approvals required to implement any approved ATC(s) incorporated into the Contract Documents;
- b. Obtain and pay the cost of obtaining any third party approvals required to implement any approved ATC(s) incorporated into the Contract Documents;
- c. Unless otherwise noted in the Contract, be responsible for all costs and/or delays of any nature associated with the implementation of any approved ATC incorporated into the Contract Documents; and
- d. Be solely responsible for reviewing the RFP and determining if the ATC deviates from the revised requirements if SCDOT revises the RFP after a formal ATC has been approved. The Proposer must submit a request for approval of all additional variances required within five (5) business days of receipt of the RFP addendum.

3.9 Stipends

By submitting a Proposal in response to the RFP, the Proposer acknowledges the following:

1. It is the intent of SCDOT to award a stipend of \$400,000.00 to each responsible and responsive Proposer subject to the terms of the Stipend Agreement set forth in Section 13 of the RFP Instructions.
2. If Proposer elects to receive a stipend, the Stipend Acknowledgement form and Stipend Agreement shall be signed by Proposer and submitted as part of the unsealed Technical Proposal. The Stipend Agreement will not count against the specified page limit.

4. PROPOSAL DEVELOPMENT AND SUBMITTAL

Proposals must be submitted separately in two parts, a Technical Proposal and a Cost Proposal. Required forms, confidentiality list, conceptual plans, and approved ATCs used in preparing the Proposer's Cost Proposal shall also be incorporated in the Technical Proposal as Appendices. If a Proposer does not, at a minimum, submit a Technical Proposal Narrative and Technical Proposal Conceptual Plans, the submittal will be considered non-responsive and retained without further review/evaluation. Any concepts that conflict with the RFP specifications discovered during the evaluations or after award of the Project, and which are not approved as an ATC, shall not control over RFP specifications and shall be resolved at no expense to SCDOT (i.e. time or cost). The determination of whether a concept conflicts with

the RFP specifications and the resolution of that conflict shall be at the sole discretion of the SCDOT.

4.1 Technical Proposal

The Technical Proposal Narrative shall contain no more than 10 pages, excluding the required appendices. Charts, tables, and schedules used to explain or expand on the Technical Proposal are to be included within the page limit and shall not be inserted into the appendices. No additional information shall be accepted, including, but not limited to, links to external websites, video clips, or simulations/visualizations embedded within the Narrative.

The Technical Proposal Narrative shall be on single sided 8.5”x11” letter sized paper, with minimum twelve-point Times New Roman font and double line spacing for text. Text contained on charts, exhibits, or other illustrative information shall be no smaller than 10-point Time New Roman. Any Conceptual Plans shall be provided in black and white on single sided 11”x17” paper unless otherwise noted herein.

The Technical Proposal Appendices shall only include:

Appendix A – Conceptual Plans

- A.1 – Roadway Plans
- A.2 – Maintenance of Traffic Plans and/or Documents
- A.3 – Bridge Plans

Appendix B – Required Forms, and Confidential and Proprietary Information Page List

Appendix C – Approved ATCs being incorporated into the Proposer’s Cost Proposal

In the Technical Proposal Narrative, Proposers shall include a discussion on its Project Delivery and Approach or the proposal will be considered non-responsive. The Proposer may choose to include a discussion on Innovation and Added Value; however, the decision to not discuss Innovation and Added Value will not result in a non-responsive proposal. The Technical Proposal Narrative shall be developed in the following sequence:

1. Describe the Project Delivery & Approach by discussing/providing the following. (20 points).
 - a. Describe Team’s approach for maintaining traffic on I-26 and I-126 while avoiding and minimizing impacts to the traveling public.
 - b. Describe the proposed design submittal process and include a chart showing anticipated deliverables in sequence that will allow SCDOT to conduct efficient and complete reviews. Include discussion of how the design review process is related to any proposed project phasing. Dates do not need to be included in the chart showing anticipated deliverables but durations may be included.

- c. Describe how the design of this Project ties to the phase 3 of Carolina Crossroads Modified Selected Alternative (MSA). Discuss any changes needed in the MSA to construct your design.
 - d. Describe the proposed approach to Quality Control and understanding of the Quality Assurance Program. Discuss the roles of the Proposer and SCDOT for all aspects of design and construction of the project. Discuss compliance with required standards, testing laboratories, mix designs and material certifications processes. Discuss staffing levels required to meet the sampling, testing, and inspection requirements of the Quality Assurance Program.
 - e. Describe methods that will allow any reduction in the Contract Time for the Project.
 - f. Discuss the strategies the Proposer's team will implement to mitigate or eliminate what the Proposer's team deems to be the top three risks on the Project. Describe the role that the Proposer expects SCDOT or other agencies to have in addressing these Project risks.
2. Describe the Proposer's Innovation and Added Value to the project that clearly provides additional benefit to SCDOT or the public. The Proposer has an opportunity to earn up to 100 Quality Credit points. An innovative aspect does not include practices that are standard to the industry. Innovation may include the Proposer's means and methods, roadway alignments, approach to Project, etc. If the Proposer wishes SCDOT to consider items, including ATCs, to be innovative or to provide additional quality, these items must be described in this section to be eligible for any of these points. However, SCDOT reserves the right to assign points for all items deemed beneficial to SCDOT or the public that have not been identified in this section. In addition, the Proposer should consider, but not be limited to, the following items, which SCDOT considers high risk to the Project.
- a. Minimizing and avoiding impacts to traffic during all construction and demolition activities including, but not limited to, the following:
 - Temporary lane and ramp closures
 - Traffic Shifts
 - Construction stages
 - b. Avoid or minimize impacts to Waters of the U.S.
 - c. Avoid or minimize impacts to utilities. Discuss any in-contract utilities that are avoided or have reduced impacts.
 - d. Minimize design review times and plan package submittals in order to mitigate costs for railroad reviews.

Additional items to be considered are as follows.

- a. Early opening of directional movements that would allow for weaving /merging movements at the Bush River Road and I-26 Interchange to be eliminated.

- b. Innovative construction materials and/or concepts that minimize long term Project maintenance.
- c. Overall safety and operation of the interchange proposed if different than the MSA concept.

In the Technical Proposal Appendices, Proposers shall provide the following items.

- 3. Provide Conceptual Roadway Plans (30 points). The intent of conceptual roadway plans is for the proposer to clearly demonstrate their understanding of requirements of the RFP and the Team's approach to meet those requirements. The quality of the plans will be reviewed and scored for design content and compliance with RFP requirements, including ATC's, if any, rather than plan development/preparation conformance. The following shall be provided.
 - a. Typical sections for all roadways shall include as a minimum (11"x17" plan sheets):
 - Design speed
 - Functional classification
 - Lane configuration and widths
 - Shoulder and median widths
 - Cross slopes
 - Point of grade
 - Notes and details as necessary
 - b. Plan and profile for the entire project limits including interchange layout (11"x17" plan sheets).

Plan view shall include as a minimum:

- Geometric layout with reference data
- Superelevation data
- Taper lengths
- Deceleration/acceleration lengths
- Construction limits
- Control of Access Limits (mainline and interchange)
- Existing and SCDOT's proposed Right of Way
- Lane alignment
- Clear zone limits
- Horizontal clearance at obstructions (any critical locations)
- Roadside barriers (location and type)
- Bridge and box culverts
- Limits of retaining walls
- Alignment of 30" sewer force main
- Indicate any design exceptions approved in the RFP

Profile view shall indicate (11"x17" plan sheets):

- Grades & elevations
 - Vertical curvature (PI station & elevation, length)
 - Bridge clearance envelopes
- c. Cross sections in accordance with Roadway Design Manual.
 - d. Special emphasis details (where needed to clearly demonstrate understanding and approach – tying to the future phases of Carolina Crossroads MSA.)
4. Provide Conceptual Maintenance of Traffic Plans (10 points). The plans shall depict the number of construction stages and a staging narrative within those plans to include duration of each stage. The plans may be color coded and can be provided on roll plots at 1" = 200' on 36" width x 8' length sheets for the entire projects limits including interchanges, as applicable. Plan scale and detail for critical areas shall be appropriate for demonstrating transitions, directional flow, and all items below.
 - a. Plan for areas deemed critical by the design team for staging concerns. These areas may require cross sections for more detail.
 - b. Plan for access to the median work zone (ingress and egress).
 - c. Plan for maintaining ramp traffic.
 - d. Plan for maintaining positive temporary drainage during stages.
 - e. Plan for placing girders over the interstate, river, and railroad.
 - f. Plan for demolishing existing Colonial Life Blvd. bridge over I-126.
 - g. Temporary pavement designs including proposed uses and duration of use.
 - h. Plan for notifying the traveling public of upcoming stages
 5. Provide Conceptual Bridge Plans which shall consist of the following (40 points).
 - a. Plan and profile of bridge showing horizontal and vertical clearances and expansion joint locations and types of joint materials.
 - b. Superstructure cross sections and substructure elevations showing pertinent structural elements, dimensions, and types of bearings.
 - c. Construction staging plan for bridge work including dimensions of temporary roadway widths both on the bridges and, where applicable, on the roadway beneath the bridges.
 - d. Bridge construction access plan showing areas used to access the bridge work and showing proposed equipment and material handling locations and staging.
 - e. Retaining wall envelopes at the bridge ends showing top of wall, ground lines, bottom of wall, and a detail of retaining wall's aesthetic treatment (required only if retaining walls are proposed).
 6. Required Forms, and Confidential and Proprietary Information include.
 - a. Stipend Acknowledgement form
 - b. Stipend Agreement
 - c. EEO Certificate
 - d. Non-Collusion Certificate
 - e. Notice of Receipt of Addendum

- f. Updated Organization Chart and Notarized Statement of Availability of Key Individuals
 - If SCDOT has approved the replacement of Key Individuals since short-listing, provide an updated organizational chart from the Proposer’s Statement of Qualifications incorporating the approved changes by the SCDOT.
 - The Proposer shall include notarized written statement from the Proposer’s Project Manager indicating that all Key Individuals identified on the original organizational chart submitted with the SOQ or the updated organizational chart will be available at the times and durations required in the RFQ and RFP.
- g. Confidential and Proprietary Information Page List (See Section 4.4)
- h. Prequalification certificate for Proposer (lead contracting entity) identified in the organization chart. If the Proposer is a Joint Venture, prequalification certificates for each individual member and/or partner, as well as for the Joint Venture.
- i. A copy of the joint venture organizational agreement, if not already submitted with the SOQ.

The Technical Proposal Narrative and Conceptual Plans submitted as a part of the Technical Proposal will be considered a commitment and shall become part of the contract. If awarded the Project, the Proposer commits to deliver this Project as set forth in their Technical Proposal and further agrees to correct all non-conforming aspects, omitted items, and deficiencies to the satisfaction of SCDOT and at no additional costs. If subsequent revisions to the Technical Proposal are desired by the Proposer, even if within the parameters of the RFP requirements, SCDOT approval will be required. SCDOT reserves the right to utilize the Contract Change Request process to approve any desired revision.

4.2 Cost Proposal

The Cost Proposal shall be clearly marked as “Confidential Proprietary Information” by the Proposer and shall include the completed Cost Proposal Bid Form and Bid Bond Form provided at the end of this document. The Cost Proposal Bid Form and Bid Bond Form shall be sealed in a separate envelope and delivered as part of the Cost Proposal per the Milestone Schedule.

4.2.1 Bid Bond

Bid Bonds must be issued by a corporate surety registered and authorized to do business in the State of South Carolina. Any person signing a bid bond as an attorney-in-fact shall include with the bid bond evidence of authority to bind the surety. An original, or a photocopy or facsimile of an original, power of attorney is sufficient evidence of such authority. Electronic, mechanically-applied and printed signatures, seals and dates on the power of attorney shall be considered original signatures, seals and dates, without regard to the order in which they were affixed. Make certain that the proposal guaranty is written by a company licensed

for surety authority by the Chief Insurance Commissioner of the South Carolina Department of Insurance and has a rating of “A” or better assigned by A.M. Best Company on its most recent Best’s Key Rating Guide; otherwise, the bond will not be accepted. Ensure that the proposal guaranty is fully executed and indicates the name of the Proposer, the name of the surety, the project for which the bond is issued, the penal amount of the bond, and that the bond guaranties and names the South Carolina Department of Transportation as the obligee. Proposal guarantees must be included in the Proposer’s response to the RFP on the required form and submitted as part of the sealed cost proposal. Failure to furnish a bid bond in the proper form and amount with the response to the RFP may be cause for rejection of the proposal. Bid bonds shall be payable to SCDOT, shall be for at least five percent (5%) of the total amount of the proposal, and shall serve as a guarantee deposit that the offer will be carried out to the complete satisfaction of SCDOT.

Failure to execute the Contract, or failure to meet and submit insurance and bond requirements within 20 days of receipt of the contract, shall result in its bid security being forfeited, and the Notice of Award and Contract will be rescinded and awarded to another Proposer. Withdrawal or attempted withdrawal of a proposal after the receipt of the cost proposal may also result in forfeiture of bid security.

A Proposal submitted without the Bid Bond Form may be deemed non-responsive.

4.3 Proposal Submittal

Proposals must be submitted separately in two parts, a Technical Proposal and a Cost Proposal. Proposers are required to upload the Technical Proposal, signed forms, and appendices, online through ProjectWise in PDF format. Two completed submittals per team will be accepted, one original and one redacted (if the Proposer elects to waive payment of the Stipend), and shall be uploaded by either the lead contracting entity or lead design firm. The original proposal documents that are uploaded to ProjectWise shall be named in accordance with the Design-Build File Naming Conventions. If the Proposer elects to waive payment of the Stipend, redacted proposal documents shall be uploaded to ProjectWise using the format outlined in the Design-Build File Naming Conventions. The naming conventions requirements can be found at <https://www.scdot.org/business/design-build.aspx>. Be advised of the time required to set up new account. All requests for new accounts must be received 72 hours prior to the Proposal deadline indicated in the Milestone Schedule. More information is available at <https://www.scdot.org/business/design-build-projectwise.aspx>.

Proposers are to physically deliver one sealed, printed copy of the Cost Proposal. Deliver to:

Mr. Nick Pizzuti
Office of Professional Services Contracting

South Carolina Department of Transportation
955 Park Street, Room 128
Columbia, South Carolina 29202-0191

Proposers are responsible for affecting delivery by the date in the Milestone Schedule. Late submissions will be rejected without opening. SCDOT accepts no responsibility for misdirected or lost Proposals.

4.4 Confidentiality of Proposals

If the Proposer elects to waive payment of the Stipend, Proposer shall specifically mark as “Confidential” any elements of their Technical Proposal and Cost Proposal, as well as any pre-proposal exchanges of information, that they consider to contain confidential or proprietary information, and the release of which would constitute an unreasonable invasion of privacy. All markings must be conspicuous; use color, bold, underlining, or some other method in order to conspicuously distinguish the mark from the other text. Do not mark the entire Proposal as confidential or proprietary. **In the Technical Proposal appendix, Proposer shall include a list of page numbers that contain confidential and/or proprietary information. Failure to include this list in the Technical Proposal appendix waives the confidentiality protection and subjects the information to disclosure in accordance with the law.** In determining whether to release documents, the SCDOT will rely on the Proposer’s marking of each page or portions of pages of documents, as required by these instructions, as being either “Confidential” or “Trade Secret”. Proposer shall be prepared upon request to provide justification of why such materials shall not be disclosed under the South Carolina Freedom of Information Act, Section 30-4-10, et seq., South Carolina Code of Laws (1976) as amended. Proposals will be kept confidential and will not be disclosed, except as may be required by law.

The Proposer must submit one complete copy of your proposal from which you have concealed such “Confidential” information, i.e. the redacted copy. Even in the absence of “Confidential” information, the Proposer must submit a redacted copy of their proposal. The redacted copy should (i) reflect the same pagination as the original, (ii) show the empty space from which information was redacted, and (iii) be submitted electronically. Except for the information concealed, the redacted copy must be identical to your original proposal, and the SCDOT POC must be able to view, search, copy and print the redacted copy without a password.

4.5 Non-collusion and Equal Employment Opportunity Certification

Proposers shall certify that they have not participated in any collusion or otherwise taken any action in restraint of free competitive bidding in connection with the submission of this Proposal on this Project. A Proposal submitted without the non-collusion certification may be deemed non-responsive. The non-collusion certification form provided as part of this document shall be submitted as part of the Technical Proposal and will not count against the specified page limit. Each joint venture team member shall submit a separate non-collusion certification.

Proposers shall complete the Equal Employment Opportunity (EEO) Performance Certification form provided as part of this document. A Proposal submitted without the EEO certification may be deemed non-responsive. The EEO certification form shall be submitted as part of the Technical Proposal and will not count against the specified page limit. Each joint venture team member shall submit a separate EEO certification.

5. EVALUATION OF PROPOSALS

5.1 Evaluation Committee

An Evaluation Committee (“Committee”) will be appointed by SCDOT to review the Proposals. The voting committee members will be comprised of SCDOT employees. The committee may consult with SCDOT employees, Project stakeholders, and/or outside consultants having expertise in the various disciplines required by the Project, including FHWA.

5.2 Proposal Review

The Committee will review the Technical Proposals and determine responsiveness based on the Proposal Development criteria in Section 4. Cost Proposals will be accepted from those Proposers deemed to have responsive Technical Proposals. Proposers that submit a non-responsive Technical Proposal will be sent a letter with a detailed explanation as to the reasons for determining non-responsiveness. All original copies of the non-responsive Technical Proposal(s) will be retained by SCDOT. Reasons for determining a Technical and/or Cost Proposal to be non-responsive may result from, but are not limited to, the following: failure to provide all information requested in the Proposal, failure to conform to the material requirements of the RFP, conflict of interests, conditional Proposals, failure to provide complete and honest information, or failure to complete the Cost Proposal Bid Form correctly. Technical and/or Cost Proposals which impose conditions that modify material requirements of the RFP may be rejected as non-responsive. Proposers will not be given an opportunity to correct any material nonconformity. Any deficiency resulting from a minor informality may be clarified or waived at the sole discretion of the SCDOT.

5.3 Technical Proposal Evaluation

Technical Score

All Technical Proposals will be evaluated and scored on a scale of 0 to 100 points prior to opening the Cost Proposals. A Technical Proposal Narrative outlining the Proposer’s Project Approach and Delivery which meets the minimum expectations of SCDOT as described in the RFP will be scored at 20 points. Conceptual Plans providing a quality design through sound engineering principles and practices will be scored at 80 points. Sound engineering principles and practices are those design concepts consistent with the RFP criteria and industry standards that are reliable, safe, and work efficiently as determined by SCDOT. Points will be deducted from the Project Approach and Delivery Technical Narrative and Conceptual Plans for aspects that do not conform to the RFP

requirements, have omitted items, and contain deficiencies. At SCDOT’s discretion, points will also be deducted for aspects of a Proposal that lack sound engineering judgement, as determined by SCDOT, in accomplishing the scope of work, incorporate minimal design values in areas where higher values are more commensurate with the design context, or provide unsuitable quality. A Proposer will be deemed non-responsive if the evaluation of their Technical Proposal results in a score less than 70. The following criteria will be used in determining the Technical Score.

Project Delivery and Approach	20 points
Conceptual Roadway Plans	30 points
Conceptual MOT Plans	10 points
Conceptual Bridge Plans	40 points
Required Forms	<u>Pass/Fail</u>
Total Available	100 points

Each member of the Committee will examine each Proposal in detail to measure its contents against the evaluation factors and assign a score to each factor. The Committee will then meet and formulate its collective conclusions. The Committee must discuss significant variations in evaluator’s scores or assessments of technical merit and resolve discrepancies or fully explain them. The Committee will assign the final score for each Technical Proposal by consensus.

The Proposer may be deemed non-responsive if all required forms are not included in the Technical Proposal Appendices. SCDOT reserves the right to request any required forms not included in the Technical Proposal. If the Proposer does not provide the omitted forms in the time allotted by SCDOT, the Proposer shall be deemed non-responsive.

Quality Credit Score

The Technical Proposal Narrative outlining the Proposer’s Innovation and Added Value that, in the opinion of the SCDOT, provide additional benefits and added value to the Project beyond that specified in the RFP requirements will be awarded Quality Credits up to 100 points.

5.4 Presentations

Proposers who have submitted responsive Technical Proposals will be invited by the Committee to make a presentation on the date identified in the Milestone Schedule. Presentations may be held in person or via telephone and/or video conference. If SCDOT elects to hold the presentations via a telephone and/or video conference, SCDOT will notify Proposers in advance of the date of the presentations. The Committee may prepare Clarification and/or Communication questions and these questions may be sent to the Proposers by the SCDOT POC prior to the presentation. The purpose is to highlight the key elements of their Proposal and to provide an opportunity to verbally answer questions through an open dialogue. Proposers will be permitted to ask questions during the presentation. The presentation will be scheduled for 1 hour 20 minutes. SCDOT will

terminate the presentation promptly at the end of the allotted time. The format for the Proposer's presentations is:

- Introduction of key individuals (Proposer)
- Highlight of Key Elements (maximum of 20 minutes) (Proposer)
- Clarification and Communication Q&A, Open Dialogue (SCDOT and Proposer)
- Wrap-up (Proposer)

The Proposer's attendees may consist of the Proposer's POC, key individuals identified in the Proposer's Statement of Qualifications, and other personnel deemed appropriate by the Proposer. However, the number of attendees shall not exceed 12 individuals.

The presentation will not constitute Discussions or negotiations. If presentations are held in person, the Technical Proposal submitted electronically to the SCDOT will be made available to the Proposer via a computer with large monitors suitable for display to the Committee and the Proposer's attendees. The Proposers will be able to navigate through their proposal and plans via the SCDOT provided computer access. If, SCDOT elects to hold presentations via telephone and/or video conference, the Proposers are responsible for setting up the conference and shall provide the login information to their attendees and SCDOT POCs for distribution to the Committee in advance of the presentations. If a video conference is used, Proposers are responsible for displaying a copy of their Technical Proposal, as previously submitted to SCDOT, on the video conference screen.

5.5 Clarifications

SCDOT, at its sole discretion, shall have the right to seek clarifications from any Proposer to fully understand information contained in their responses to the RFP. Clarifications mean a written exchange of information which takes place after the receipt of Proposals when award without Discussions is contemplated. For this Project, Proposals are intended to be evaluated and award made without Discussion unless Discussions are determined to be necessary by the SCDOT POC. Therefore, Proposer's initial offer should contain the Proposer's best terms from a cost and technical standpoint. At its discretion, SCDOT may elect to hold Discussions, despite conducting clarifications, when circumstances dictate. Clarifications do not have to be held with any specific number of Proposers and do not have to address specific issues.

The purpose of clarifications is to address minor or clerical revisions in a Proposal. Examples include, but are not limited to, transposing numbers, incomplete sentences, and contradictions. The SCDOT POC may submit written questions to any Proposer to clarify a specific section of the Proposal and the Proposer shall respond in writing. SCDOT will acknowledge in writing receipt of the response. Responses will be used by the Evaluation Committee in scoring the Proposal. Clarifications will be incorporated into the contract and will not alter the contract requirements. The SCDOT POC shall

have exclusive discretion regarding whether clarification is needed. Clarification can be used by the SCDOT POC at any point in the procurement process.

5.6 Communications

SCDOT, at its sole discretion, shall have the right to seek communications from any Proposer to fully understand information contained in their responses to the RFP. Communications do not have to be held with any specific number of Proposers and do not have to address specific issues. Communications are written exchanges, between SCDOT and Proposers, after receipt of Proposals. The purpose of Communications is to

- enhance the Evaluation Committee's understanding of Proposals; allow reasonable interpretation of the Proposal; or facilitate the evaluation process;
- address ambiguities in the Proposal or other concerns (e.g., perceived deficiencies, weaknesses, errors, omissions, or mistakes); and
- address adverse past performance information to which the offeror has not previously had an opportunity to comment.

Communications shall not be used to cure Proposal deficiencies or material omissions, materially alter the technical or cost elements of the Proposal, and/or otherwise revise the Proposal. The SCDOT POC may submit written questions to any Proposer to seek Communication exchanges on perceived deficiencies, weaknesses, errors, omissions, mistakes, or lack of sound engineering judgement in the Proposal. The Communication process can include a verbal exchange. However, the Proposer shall respond in writing to conclude the Communication process. The written responses shall become part of the contract documents.

SCDOT reserves the right to conduct Discussions if clarifications, presentation or communication exchanges reveal the need to amend the RFP.

5.7 Technical and Cost Proposal Analysis

Upon delivery of the Proposer's Cost Proposal at the time and date outlined in the Milestone Schedule, the Statement of Qualifications (SOQ) Score, the Technical Score, and the Quality Credit Score will be provided confidentially in a sealed envelope to each Proposer. After distribution of the scores, SCDOT will convene a closed session meeting; at which time, the Cost Proposals of Proposers with responsive Technical Proposals will be opened so that the analysis may be conducted.

The Total Cost to Complete and all other weighted criteria factors for each respective Proposer will be entered into the weighted criteria formula to determine a total weighed criteria score. Each Total Cost to Complete will be analyzed relative to the other weighted criteria factors and compared against the confidential SCDOT Engineer's Estimate. SCDOT will analyze the Proposals to determine if an award is justified. Upon

completion of the analysis, the closed session will be adjourned and a public announcement will be made at the time and date outlined in the Milestone Schedule.

If upon analysis, there are no apparent concerns with the Proposals, the total weighted criteria score and the Cost Proposal information along with the SOQ Score, Technical Score, and Quality Credit Score for each Proposer will be read aloud during the public announcement. SCDOT intends to award the contract to the Proposer with the highest Weighted Criteria Score. However, the project may be cancelled after opening, but prior to the issuance of an award, when such action is determined in writing to clearly be in the best interest of the SCDOT. If the RFP is cancelled, Cost Proposals may be returned to the Proposers and a new solicitation may be conducted for the Project.

If upon analysis, there are concerns with the Proposals, the Cost Proposal information, SOQ Scores, Technical Scores, and Quality Credit Scores will not be read aloud and the Proposers will be advised whether SCDOT will hold discussions or cancel the procurement.

5.8 Weighted Criteria Determination

Award of the Contract, if made, will be made to the responsible and qualified Proposer whose submittals generate the highest Weighted Criteria Score. To determine the Weighted Criteria Score, the Proposer's Total Cost to Complete will have a weight of 30, the Proposer's SOQ Score will be brought forward from Phase 1 of the procurement and have a weight of 15, the Proposer's Technical Score will have a weight of 20 and the Proposer's Quality Credit Score will have a weight of 35 for a Total Weight of 100.

The Proposer submitting the lowest Total Cost to Complete will be awarded the maximum number of points, 30. The next-lowest Total Cost to Complete will be awarded points based on the product of: (a) the ratio of the lowest Total Cost to Complete divided by the next-lowest Total Cost to Complete; and (b) 30 points (i.e., the points awarded for the lowest Total Cost to Complete), with such product rounded to the nearest one hundredth of a point. The process will continue for each of the remaining Proposer's Total Cost to Complete, with points being awarded based on the product of: (a) the ratio of the lowest Total Cost to Complete divided by the respective Proposer's Total Cost to Complete; and (b) 30 points (i.e., the points awarded for the lowest Total Cost to Complete), with such product rounded to the nearest one hundredth of a point.

The SOQ, Technical Score, and Quality Credit Score for each proposer is converted to a percentage and multiplied by the point value assigned to each category, with such product rounded to the nearest one hundredth of a point.

The following formula will be used to determine the Weighted Criteria Scores.

$$\text{Weighted Criteria Score} = \left(\frac{A_{low}}{A_n} \times x_A \right) + \left(\frac{C}{100} \times x_C \right) + \left(\frac{D}{100} \times x_D \right) + \left(\frac{E}{100} \times x_E \right)$$

- low the lowest value from the proposals being scored
- n the proposal that is being scored
- x weight expressed as point values define above in this section
- A Total Cost to Complete all work to be performed under the contract
- C SOQ Score from RFQ phase
- D Technical Score
- E Quality Credit Score

Example for Determining the Weighted Criteria Score

Proposal	Total Cost to Complete (A)	Weighted Cost Score (x=30)	SOQ Score (C)	Weighted SOQ Score (x=15)	Technical Score (D)	Weighted Technical Score (x=20)	Quality Credit Score (E)	Weighted Quality Credit Score (x=35)	Total Weighted Criteria Score
A	\$30,000,000	30	60.10	9.02	90.20	18.04	55	19.25	76.31
B	\$35,000,000	25.71	65.30	9.80	85.70	17.14	35	12.25	N/A
C	\$38,000,000	23.68	70.20	10.53	92.20	18.44	65	22.75	75.40
D	\$31,000,000	29.03	64.30	9.65	93.00	18.60	70	24.50	81.78

Note: In this example, Proposal B was determined to be non-responsive and Proposal D was determined to be the highest Weighted Criteria Score.

In the event that two or more Proposers are determined to have the same Total Weighted Criteria Score, the award, if made, will be made to the Proposer with the highest weighted score for the criterion with the highest weight.

5.9 Discussions

If necessary, after the Technical and Cost Proposal analyses, SCDOT may hold confidential discussions with each responsive Proposer relating to aspects of their respective Proposal. Discussions are written or oral exchanges with the intent of allowing the Proposers to revise their proposals. However, after Discussions are concluded, SCDOT reserves the right to proceed with award without revisions to the proposals.

Discussions are tailored to each Proposer’s proposal. The discussion process is intended to assure that Proposers fully understand the requirements of the RFP and that the evaluation team fully understands each qualified Proposer’s Technical Proposal and the Proposer’s ability to perform as needed. Discussions involve only a limited exchange of information. Discussions are not negotiations. The SCDOT POC may discuss with each Proposer deficiencies, significant weaknesses, and other aspects of a proposal that could be altered or explained in their proposal. However, the SCDOT POC is not required to discuss every area where the proposal could be improved. The scope and extent of discussions are a matter of the SCDOT POC’s judgment. If SCDOT determines that

discussions are necessary, SCDOT will forward a written invitation to the responsive Proposers.

SCDOT reserves the right to hold multiple discussions for any length of time with all of Proposers. All discussions shall be controlled by the SCDOT POC. Proposers shall not communicate with any other SCDOT employees regarding these discussions except at the appropriate discussion meetings.

At the conclusion of discussions, SCDOT may either, 1) issue a Request for Best and Final Offers or 2) cancel the procurement.

5.10 Best and Final Offer

At the conclusion of discussions, if SCDOT determines that Proposal revisions are warranted, SCDOT may issue a Request for Best and Final Offer (BAFO). Regardless of the length or number of discussions, there will be only one request for a BAFO. If necessary, SCDOT may also issue an addendum to revise the RFP to allow revisions to clarify and document understandings reached during discussions. The Request for BAFO will include instructions for preparing and submitting the BAFO and will include a new Milestone Schedule. Proposers submitting a BAFO will not be requested to re-submit any documents which are unchanged from their initial proposals. Proposers should provide necessary changes to individual paragraphs, as briefly as possible, together with a table of contents, which clarifies where within the initial proposal the additional information or changed documents would be placed. Proposal revisions shall include a BAFO Acknowledgement Form that acknowledges receiving all RFP amendments, if applicable. If only Cost Proposal revisions are requested, Proposers will revise and resubmit the Cost Proposal, and SCDOT will analyze the Cost Proposals as outlined in Section 5.6. If Technical Proposal revisions are warranted, Proposers will revise and resubmit, and the procurement process will return to Section 5. A new bid bond shall be submitted only if the final proposal revisions to the Proposer's Cost Proposal are greater than its initial Cost Proposal.

5.11 Protest

5.11.1 Grounds for Protest

Protest of Contents of Solicitation (Invitation For Bids or RFPs or other solicitation documents, whichever is applicable, or any amendment to it, if the amendment is at issue): Any Proposer who is aggrieved in connection with a solicitation document shall file a written protest to SCDOT's Chief Procurement Officer (CPO), PO Box 191, Columbia, SC 29202, within five business days of the date of posting of the solicitation, RFQ, RFP, or other solicitation document or any addendums to it on the SCDOT design-build website.

Protest of Short-listing: Any Protestant who is aggrieved in connection with the selection of short-listed Proposers shall file a written protest with the CPO within five business days of the date the short-list is posted on SCDOT design-build

website. Any matter that could have been raised pursuant to the Protest of Contents of Solicitation, section above, may not be raised as a protest of the selection of the short-list. The number of Proposers short-listed is not grounds for a protest.

Protest of Award: Any Protestant who is aggrieved in connection with the award of the contract shall file a written protest with the CPO within five business days of the date the Request to Award memorandum is posted on SCDOT design-build website. Any matter that could have been raised pursuant to the protest of contents of solicitation or short-listing, section above, may not be raised as a protest of award.

Exclusive remedy: The rights and remedies granted in this section to Proposers, either actual or prospective, are to the exclusion of all other rights and remedies of Proposers against the SCDOT.

Failure to file a timely protest: If protestant fails to request a protest within the five business days, the short-list and award shall be final.

5.11.2 SCDOT Procedures for Protest

Protest: A protest must be in writing, filed with the CPO, and set forth the grounds of the protest and the relief requested with enough specificity to give notice of the issues to be decided. The protest must be received by the CPO within the time provided.

Burden of Proof: The protestant bears the burden of proving the validity of the protest or claim against the SCDOT.

Duty and Authority to Attempt to Settle Protests: Before commencement of an administrative review, the CPO, or a designee of the CPO, may attempt to settle by mutual agreement a protest of an aggrieved Protestant, actual or prospective, concerning the solicitation, short-listing, or award of the contract. Any settlement reached by mutual agreement shall be approved by the CPO.

Administrative Review and Decision: If, after reasonable attempt, a protest cannot be settled by mutual agreement, the CPO, or a designee, shall promptly conduct an administrative review. The CPO shall commence the administrative review no later than five business days after a reasonable settlement attempt and shall issue a decision in writing within five business days of completion of the review. The decision must state the reasons for the action taken. The decision shall include findings of fact and conclusions of law, separately stated. A copy of the decision along with a statement of appeal rights set forth below must be mailed or otherwise furnished immediately to the protestant.

Finality of Decision and Appeal: The SCDOT's decision pursuant to the above paragraph is final and conclusive. A person adversely affected by the final

decision can appeal to circuit court and hereby waives a trial by jury regarding any protest arising out of this procurement and any such trial will be a non-jury trial before the South Carolina Circuit Court in Richland County.

Stay of Award: The contract award is stayed until issuance of a final decision by the SCDOT. Once a final decision is issued, the filing of a petition to appeal that decision does not stay enforcement of SCDOT's decision to award the contract.

All Freedom of Information (FOIA) requests will be sent to the FOIA Officer in the SCDOT Office of Chief Counsel.

6. SELECTION OF CONTRACTOR

The Chairman of the Committee will present a report regarding the review of the Proposals along with the Technical and Cost Proposal Analysis results to SCDOT Director of Construction's Office and recommend selection of the Proposer with the highest Weighted Criteria Score. Prior to contract execution, the Director of Construction's Office may conduct limited negotiations on any issues regarding scope, schedule, financing, inclusion of ATCs, inclusion of any concepts submitted by another Proposer (provided a stipend is accepted by the unsuccessful Proposer), or any information provided by the selected Proposer. The Director of Construction's Office will prepare a Secretary of Transportation Record of Approval Form requesting authorization to award and execute a contract. Upon approval by the SCDOT Secretary of Transportation, SCDOT will offer a contract to the selected Proposer. However, if the contract terms are not accepted by the selected Proposer or the selected Proposer is unable to fulfill the contract requirements, Proposer agrees that this constitutes a withdrawal and SCDOT may offer a contract to the Proposer with the next highest Weighted Criteria Score.

7. GENERAL INFORMATION

SCDOT reserves the right to terminate the evaluation of one or more of the Proposals if it is determined to be in the best interest of the state to do so.

SCDOT reserves the right, at its sole discretion, to either cancel this solicitation or to re-advertise in another public solicitation when it is in the best interest of the state to do so.

SCDOT reserves the right to reject any and all Proposals, or parts thereof, and/or to discontinue contract execution with any party at any time prior to final contract execution.

Except as to stipends, SCDOT assumes no liability and will not reimburse costs incurred by firms, whether selected or not, in developing Proposals or in contract execution.

SCDOT reserves the right to request or obtain additional information about any and all Proposals. SCDOT may also issue addendums to the RFP, which will be posted on the website and emailed to all Proposers' Points of Contact.

SCDOT reserves the right to revise or amend the RFP, specifications and/or drawings, including changes to the date the Proposal is due. Such changes, if any, will be announced by an addendum(s) to this RFP. All information relating to this RFP, including pertinent

changes/addendums and other applicable information will be posted on SCDOT's Design-Build website <https://www.scdot.org/business/design-build.aspx>. If changes are made to the RFP within 10 days of the due date, Milestones may be adjusted accordingly. Proposers are advised to check this site frequently to ensure they have the latest information.

Receipt of an addendum by the Proposer must be acknowledged in the space provided on the Addendum Notice to Proposer Transmittal Form posted on the SCDOT Design-Build website for this Project. Proposers shall submit the signed Notice with its Technical Proposal response to this RFP. Failure to acknowledge an addendum may result in rejection of the Proposal. Explanations or instructions given in a form other than an addendum or ATC response letter shall not be binding.

After award, if an unsuccessful Proposer would like to schedule a debriefing, Proposer shall submit a request within three business days from the date the award notification is posted on the SCDOT Design-Build website for this Project. Only written requests (emails are acceptable) for a debriefing will be scheduled. Failure to request a debriefing within the three business day period waives the opportunity for a debriefing.

Proposer shall be held responsible for the validity of all information supplied in its Proposal, including that provided by potential subcontractors. Should SCDOT subsequently learn that the facts and conditions were not as stated, the Proposal may be rejected or contract terminated for default if after award, in addition to any other remedy available under the contract or by law.

Proposer, by submitting a Proposal, represents that it has read and understands the RFP, its exhibits, attachments and addendums, and that its Proposal is made in compliance with the criteria of the RFP. Proposers are expected to examine the RFP, its exhibits, attachments and addendums thoroughly and should request an explanation of any ambiguities, discrepancies, errors, omissions, or conflicting statements therein. Failure to do so will be at the Proposer's risk. Proposer assumes responsibility for any patent ambiguity in the RFP, its exhibits, attachments and addendums that Proposer does not bring to SCDOT's attention.

Proposal Acceptance Period - By submitting a Proposal, Proposer agrees to hold the Proposal offer available for acceptance a minimum of 90 calendar days after the submission of their Cost Proposal. If a BAFO is requested, Proposer agrees to hold the BAFO available for acceptance a minimum of 90 calendar days after the submission of their BAFO Cost Proposal.

Submission of a Proposer's bid is not considered complete until both the Technical and Cost Proposals are received by SCDOT.

If a Proposer withdraws any time during the procurement, the stipend shall be forfeited.

A business day is hereby defined as a day in which SCDOT Headquarters is open for business.

8. MILESTONE SCHEDULE

Milestone Schedule	Date/Time
Provide RFP for Industry Review to Short-list Proposers	Monday, July 06, 2020
Deadline for Proposers to submit Non-Confidential Questions on the RFP for Industry Review	Monday, July 20, 2020 by 7:30am EST
Open-Forum Meeting with Proposers for RFP for Industry Review Non-Confidential Questions/Clarifications	Monday, August 03, 2020 at 10:00am EST
Issue Final RFP	Tuesday, September 01, 2020
Submittal of Preliminary ATC Package and Confidential Questions	Wednesday, September 09, 2020 by 7:30am EST
Confidential Preliminary ATC and Confidential Questions One-on-One Meetings with Proposers	Tuesday, September 22, 2020
Submittal of Non-Confidential Questions	Tuesday, September 29, 2020
SCDOT Responds to Preliminary ATCs	Wednesday, September 30, 2020 by 2:00pm EST
Submittal of Formal ATCs for Initial Review and Submittal of Confidential Questions	Wednesday, October 14, 2020 by 7:30am EST
SCDOT Responds to Formal ATCs with final determination, asks questions/requests information, or provides conditional responses	Wednesday, October 28, 2020
Submittal of Non-Confidential Questions	Wednesday, October 28, 2020 by 2:00pm EST
Confidential Formal ATC One-on-One Meetings	Wednesday, November 04, 2020
Resubmittal of Formal ATCs in its final form (no revisions allowed after this submittal, unless requested by SCDOT)	Tuesday, November 10, 2020 by 2:00pm EST
SCDOT's Final Determination for Formal ATCs	Monday, November 30, 2020
Submittal of Non-Confidential and Confidential Questions	Monday, December 14, 2020 by 7:30am EST
Submittal of Technical Proposals	Friday, January 15, 2021 by 2:00pm EST
Technical Proposal Presentations	Wednesday, February 17, 2021
Submittal of Cost Proposals	Monday, March 08, 2021 from 9:00am to 10:00am EST
Public Announcement of the Technical and Cost Proposal Analysis (with team representatives present)	Monday, March 08, 2021 at 2:00pm EST

Company: _____

Address: _____

Note: The above certification is required by the Equal Employment Opportunity Regulations of the Secretary of Labor (41 CFR 60-1.7(b)(1)), and must be submitted by PROPOSERS only in connection with contracts which are subject to the equal opportunity clause. Contracts that are exempt from the equal opportunity clause are set forth in 41 CFR 60-1.5. (Generally, only contracts of \$10,000 or under are exempt.)

Currently, Standard Form 100 (EEO-1) is the only report required by Executive Orders or their implementing regulations.

Proposers, Primary Members, or proposed Contractors and Consultants who have participated in a previous contract subject to the Executive Orders and have not filed the required reports shall note that 41 CFR 60-1.7(b)(1) prevents the award of contracts and subcontracts unless such contractor submits a report covering the delinquent period or such other period specified by the Federal Highway Administration or by the Director, Office of Federal Contract Compliance, U.S. Department of Labor.

Proposer: _____

ADDRESS: _____

The undersigned Proposer, hereby:

Waives the stipend for this Project.

Accepts the stipend for this Project.

By accepting the stipend for this Project, Proposer agrees:

- 1) to execute and include the Stipend Agreement in Article XIII of the RFP with their RFP response;
- 2) to submit an invoice with FEIN number for the stipend amount to the SCDOT POC after SCDOT’s posting of the Notice of Award on SCDOT’s Design-Build Website.;
- 3) to transfer all rights to its Work Product used to develop the Proposal as of the date of this acknowledgement. “Work Product” ” means all submittals, including ATCs, ideas, innovations, solutions, methods, processes, design concepts, materials, electronic files, marked up drawings, cross sections, quantity lists and intellectual property, made by Proposer during the RFP process, including the Proposal, exchange of information during the pre-Proposal and post-Proposal period.

SCDOT will pay the stipend to each eligible unsuccessful Proposer, who has signed a Stipend Agreement, within ninety (90) days after execution of the contract or the decision to not award a contract.

13. STIPEND AGREEMENT

STIPEND AGREEMENT
Project ID: P039718
Carolina Crossroads Phase 1 – Colonial Life Blvd. at I-126 Interchange
Richland and Lexington Counties

THIS STIPEND AGREEMENT (the “Agreement”) is made and entered into as of the ____ day of _____, 20__, by and between the SOUTH CAROLINA DEPARTMENT OF TRANSPORTATION (hereinafter “SCDOT”), and _____ (“Proposer”), with reference to the following facts:

SCDOT issued a Request for Proposal (“RFP”) for design and construction of the above-referenced Design-Build Project (“Project”), pursuant to procurement authority granted in Section 57-5-1625 of the S.C. Code of Laws, 1976, as amended. The RFP provided for payment of stipends as provided herein.

NOW, THEREFORE, Proposer hereby agrees as follows:

1. Work Product.

1.1 Proposer shall prepare and submit a responsible and responsive technical and cost Proposal that conforms in all material respects to the requirements and provisions of the RFP, as determined by SCDOT, and are timely received by SCDOT in accordance with the RFP Milestone Schedule.

1.2 By signing this Stipend Agreement, Proposer agrees to transfer full and complete ownership to SCDOT of all Work Product. The Work Product (as defined below) shall become the property of SCDOT without restriction or limitation on its use, without further compensation or consideration, and can be used in connection with this Project or any future projects by SCDOT. Neither Proposer nor any of its team members shall copyright any of the material developed under this Agreement.

1.3 The term “Work Product” shall mean the Proposal and all material, electronic files, marked up drawings, cross sections, quantity lists, submittals, alternative technical concepts (ATC), ideas, innovations, solutions, methods, processes, design concepts, Trade Secrets or Confidential information, and intellectual property, made by or produced for Proposer in the development and submission of the technical and price Proposals, including exchanges of information during the pre-Proposal and post-Proposal period.

2. Compensation and Payment.

2.1 A stipend to Proposer for the Work Product described herein shall be \$400,000.00 and is payable on condition that Proposer (1) submitted a responsible and responsive technical and cost Proposal to the RFP which is not selected for award of this Project, or (2) was awarded the Contract but the Contract was terminated by SCDOT for convenience after the Submittal of Proposal Date (See Final RFP Milestone schedule) but prior to the Notice to Proceed #1. Responsibility and responsiveness of the Proposal will be determined by SCDOT as a condition of payment.

2.2 SCDOT will pay the stipend to Proposer under the following conditions:

(a) Proposer has submitted a signed Stipend Agreement with its response to the RFP.
(b) After posting of the Notice of Award on SCDOT’s Design-Build Website, Proposer has submitted to SCDOT an invoice, with FEIN Number, for the Stipend amount.

(c) After execution of the contract or the decision not to award a contract, SCDOT will pay the invoice for the stipend amount to the unsuccessful Proposer meeting the criteria of Section 2.1 within 90 calendar days of receipt of the invoice from Proposer.

(d) If the procurement is suspended or cancelled prior to the Proposal Due Date (see FINAL RFP Milestone schedule), no stipend will be paid to Proposer.

(e) After the submittal of Proposals, but prior to award, if the procurement is cancelled, all Proposers that provide a responsive technical and cost Proposal to the final RFP and submitted a signed Stipend Agreement with their RFP shall receive the stipend

(f) In the event of a Best and Final Offer, only one stipend will be paid.

(g) No stipends will be paid for submitting RFQ responses.

(h) No stipends will be paid to a Proposer who withdraws at any time from this procurement.

2.3 Acceptance by the Proposer of payment of the stipend amount from SCDOT shall constitute a waiver by Proposer of any and all right, equitable or otherwise, to bring any claim in connection with this procurement, procurement process, award of the Contract, or cancellation of this procurement.

2.4 The Proposer awarded the contract shall be not eligible to receive a stipend.

2.5 If Proposer elects to waive payment of the stipend, SCDOT will not use the ideas or information contained in that Proposer's Proposal for this Project. However, the Proposer's Proposal will be subject to the South Carolina Freedom of Information Act.

3. Indemnities.

3.1 Subject to the limitations contained in Section 3.2, Proposer shall indemnify, protect and hold harmless SCDOT and its directors, officers, employees and contractors from, and Proposer shall defend at its own expense, all claims, costs, expenses, liabilities, demands, or suits at law or equity arising, in whole or in part, from the negligence or willful misconduct of Proposer or any of its agents, officers, employees, representatives or subcontractors or breach of any of Proposer's obligations under this Agreement.

3.2 This indemnity shall not apply with respect to any claims, demands or suits arising from use of the Work Product by SCDOT.

4. Compliance With Laws.

4.1 Proposer shall comply with all federal, state, and local laws, ordinances, rules, and regulations applicable to the work performed or paid for under this Agreement and covenants and agrees that it and its employees shall be bound by the standards of conduct provided in applicable laws, ordinances, rules, and regulations as they relate to work performed under this Agreement. Proposer agrees to incorporate the provisions of this paragraph in any subcontract into which it might enter with reference to the work performed pursuant to this Agreement.

4.2 The Proposer agrees (a) not to discriminate in any manner against an employee or applicant for employment because of race, color, religion, creed, age, sex, marital status, national origin, ancestry or disability of a qualified individual with a disability; (b) to include a provision similar to that contained in subsection (a) in any subcontract; and (c) to post and to cause subcontractors to post in conspicuous places available to employees and applicants for employment, notices setting forth the substance of this clause.

5. Assignment.

Proposer shall not assign this Agreement without SCDOT's prior written consent. Any assignment of this Agreement without such consent shall be null and void.

6. Miscellaneous.

6.1 Proposer and SCDOT agree that Proposer, its team members, and their respective employees are not agents of SCDOT as a result of this Agreement.

6.2 This Agreement, together with the RFP, as amended from time to time, the provisions of which are incorporated herein by reference, embodies the entire agreement of the parties. There are no promises, terms, conditions, or obligations other than those contained herein or in the RFP, and this Agreement shall supersede all previous communications, representation, or agreements, either verbal or written, between the parties hereto.

6.3 It is understood and agreed by the parties hereto that if any part, term, or provision of this Agreement is by the courts held to be illegal or in conflict with any law of the State of South Carolina, the validity of the remaining portions or provisions shall not be affected, and the rights and obligations of the parties shall be construed and enforced as if the Agreement did not contain the particular part, term, or provisions to be invalid.

6.4 This Agreement shall be governed by and construed in accordance with the laws of the State of South Carolina.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the date first written above.

14. BID BOND FORM

Note: This Bid Bond form is the only means of bid security that will be accepted by the S. C. Department of Transportation.

South Carolina Department of Transportation	Date Bond Executed
BID BOND	
Principal	
Surety	
Amount of Bond 5% OF Total Cost to Complete as shown on the Cost Proposal Bid form	Date of Bid
Project	

KNOW ALL MEN BY THESE PRESENTS, That we, the PRINCIPAL, hereinafter "PROPOSER" and SURETY above named are held and firmly bound unto the South Carolina Department of Transportation, hereinafter called the Department, in the sum of the amount stated above, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, and successors, jointly and severally, firmly by these presents.

The condition of this obligation is such as to operate as a guarantee that the PROPOSER will fully and promptly execute a contract and cause to be executed bonds acceptable to the Department, all as set forth in Request for Proposal (RFP) and PROPOSER's Response to RFP, should the same be accepted, and that not longer than twenty (20) days after the receipt by the PROPOSER of contract forms from the Department, he will execute a contract on the basis of the terms and conditions set forth in the RFP and PROPOSER'S Response to RFP together with and accompanied by a Performance and Indemnity bond satisfactory to the Department, in the total amount of said contract, and a Payment bond in the amount of 100% of the contract, and that failure to perform shall be just and adequate cause for the annulment of the awards; and it is fully understood that in the event of the annulment of the award, the amount of this guarantee shall immediately be at the disposal of the Department, not as penalty, but as an agreed liquidated damage. Should each and all of the foregoing conditions be fulfilled and Performance and Indemnity and Payment bonds, as set forth in the proposal, be executed, bonds being satisfactory to the Department, this obligation shall be null and void; otherwise to remain in full force and effect.

IN WITNESS THEREOF, the above-burden parties have executed this instrument under their several seals on the date indicated above, the name and corporate seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representative, pursuant to authority of its governing body.

Carolina Crossroads
Phase 1 – Colonial Life Blvd. at I-126 Interchange
Richland and Lexington Counties

WHEREAS, the South Carolina Department of Transportation, as an agency of the State of South Carolina, wishes to improve the safety and operation of the state highway system by reconstructing a new exit ramp to US 378 from I-26 eastbound and associated interstate widening in Lexington County and a full access interchange at Colonial Life Boulevard at I-126 in Richland County (Carolina Crossroads Phase 1) (hereinafter referred to as “the Project”); and

WHEREAS, the South Carolina Department of Transportation, as a servant of the people of the State of South Carolina, wishes to see this strategic project completed; and

WHEREAS, limitations imposed by traditional methods of designing, and constructing highways would mean that the Project could be completed only after an unacceptable delay; and

WHEREAS, the South Carolina Department of Transportation, working with the Federal Highway Administration (FHWA), has devised an innovative plan to allow the commencement and completion of the Project in a timely and cost-effective manner; and

WHEREAS, pursuant to Section 57-5-1625 SC Code of Law, the South Carolina Department of Transportation desires to award a highway construction contract using a Design / Build procedure; and

WHEREAS, after a competitive process, CONTRACTOR has been selected to participate in this venture by designing and building the Project; and

WHEREAS, the South Carolina Department of Transportation wishes to avail itself of and rely on CONTRACTOR’s expertise and proven track record in designing and constructing such projects, on time and within budget; and

WHEREAS, CONTRACTOR wishes to provide that expertise and to participate in this venture for the good of the people of the State of South Carolina;

NOW THEREFORE, this Agreement is executed and made, effective as of the Effective Date as defined herein, between the SOUTH CAROLINA DEPARTMENT OF TRANSPORTATION (“SCDOT”) and _____ (“CONTRACTOR”). In consideration of the covenants hereinafter set forth, the parties hereto mutually agree as follows:

I. CONTRACT DOCUMENTS

The Contract shall be composed of this Agreement and all exhibits, SCDOT's Request for Proposals and all attachments, Request for Qualifications and all attachments, CONTRACTOR's Proposal and all attachments, and CONTRACTOR'S Qualifications and all attachments. In case of conflict, the order of precedence of the Contract documents shall be: (1) this Agreement; (2) Agreement Exhibits; (3) SCDOT Request for Proposals (RFP) document and Attachment B; (4) CONTRACTOR's Proposal and attachments, clarifications, and communications; and (5) SCDOT Request for Qualifications (RFQ) and CONTRACTOR's Statement of Qualifications (SOQ). In the event of a conflict between the Project Design Criteria and Special Provisions identified in the Agreement Exhibits, the order of precedence shall be (1) the Project Design Criteria and (2) Special Provisions. The Project Information Package is provided for information only and is not a contract document. SCDOT makes no representations or warranties regarding the accuracy of the information contained therein.

II. PROJECT SCOPE

A. Scope of Work

CONTRACTOR shall furnish all services, labor, materials, equipment, supplies, tools, transportation, and coordination required to perform all design, preliminary engineering, surveying, geotechnical services, scheduling, permitting, procurement, construction, utility coordination, demolition, material disposal and any other services necessary to perform the Project as defined in the Project Scope of Work made a part hereof as EXHIBIT 3. Project Design Criteria made a part hereof as EXHIBIT 4 through 8 and Attachment B.

B. Design and Construction Responsibilities

1. CONTRACTOR, consistent with applicable state licensing laws, shall provide, through qualified South Carolina licensed design professionals employed by CONTRACTOR or procured from qualified, independent South Carolina licensed design consultants, the design work and quality control, including, but not limited to, surveys, roadway design, maintenance of traffic, geotechnical exploration and design, hydraulic analyses, storm water management, erosion control, superstructure design, and foundation and substructure design including seismic analyses for the preparation of the required drawings, specifications and other design submittals to permit CONTRACTOR to complete the work in accordance with the Contract.
2. CONTRACTOR may rely on geotechnical and survey information provided in Attachment B – Supplemental Design Criteria. The CONTRACTOR shall incorporate the information into the final project documents. CONTRACTOR shall supplement the geotechnical and survey information provided as required for its design.

3. CONTRACTOR shall provide through itself or subcontractors the necessary supervision, labor, inspection, testing, material, equipment, machinery, temporary utilities and other temporary facilities to permit performance of all demolition, earthwork, drainage, foundation work, maintenance of traffic, roadway work, structural work, excavation, erosion and sediment control work, field layout work, construction management, engineering, and inspection, utility coordination and relocation, railroad coordination, CONTRACTOR quality control and acceptance testing, maintenance, and all other work necessary to complete construction of the Project in accordance with the Contract. CONTRACTOR shall perform all design and construction activities efficiently and with the requisite expertise, skill and competence to satisfy the requirements of the Contract. CONTRACTOR at all times shall exercise control over the means, methods, sequences and techniques of construction. CONTRACTOR's operations and construction methods shall comply with all applicable federal, state and local regulations with regard to worker safety, protection of health and protection of the environment and applicable permit requirements.
4. CONTRACTOR shall design and construct the project in accordance with the approved environmental document. Where new Additional Right of Way, defined in Article VII, is required to construct the Project, the CONTRACTOR shall design and construct the Project so as to minimize the additional rights of way needed while adhering to the design criteria herein. Right of Way Services shall be the responsibility of the SCDOT and shall be done in accordance with Article VIII of this Agreement. CONTRACTOR shall furnish the SCDOT a copy of any agreements for the use of Additional Areas, defined in Article VIII, not acquired as right of way that are used in conjunction with the construction of this Project. CONTRACTOR shall abide by the provisions of all applicable environmental permits, any conditions of individual right of way agreements, and all environmental commitments. The CONTRACTOR shall sign the Contractor Certification Form and this agreement shall be made part of the contract.
5. It shall be the responsibility of CONTRACTOR to comply with all applicable federal, state, and local laws in connection with the services set forth in this Contract. CONTRACTOR shall remain in good standing with the State and promptly notify SCDOT in writing if it is determined to be disqualified, suspended, debarred, or otherwise excluded from bidding, proposing, or contracting with any federal or state department or agency. This obligation shall include, but not be limited to, procurement of all permits and licenses not obtained by SCDOT provided, however, that with respect to any permit or licenses that must be obtained in the name of SCDOT, CONTRACTOR shall perform all functions within its power to obtain the permit, including mitigation, and SCDOT will fully cooperate in this effort and perform any functions that must be performed by SCDOT. CONTRACTOR shall be responsible for payment of all charges, fees, and taxes, and for providing all notices necessary and incident to the performance of the Project as of the Effective Date of this Agreement. The Contract Price shall include all charges, fees and taxes related to the above obligations and if any charges, fees

or taxes are waived by the regulatory or governmental entity, then the amount waived shall be deducted from the Contract Price.

C. Design Criteria

It shall be the responsibility of CONTRACTOR to design all aspects of the Project in accordance with the contract documents. For the Project, CONTRACTOR shall provide a completed set of construction plans signed and sealed by a licensed professional engineer in South Carolina. CONTRACTOR shall be fully responsible for the accuracy of the design and compliance with specifications, standards and Project Criteria.

D. Design Review

1. Prior to the Preconstruction Meeting, CONTRACTOR shall provide a Draft Design Review Submittal Schedule to SCDOT. The Design Review Submittal Schedule shall include a Gantt chart of the submittal packages and will serve as the basis for reviewing the design and construction plans. The Design Review Submittal Schedule shall be updated and included with each submittal package. CONTRACTOR, CONTRACTOR's design consultant, subcontractors, suppliers and SCDOT shall discuss the schedule and procedures for submitting design plans at the Preconstruction Meeting. CONTRACTOR, CONTRACTOR's design consultant, subcontractors and suppliers shall not provide any design deliverables until the Design Review Submittal Schedule is approved by SCDOT.
2. A Design Quality Control (QC) Plan shall be submitted for review and approval prior to any design or plan production. The plan shall clearly detail the processes and steps utilized by the designer and contractor to consistently produce quality designs and plans. The Design QC Plan shall be the first submittal listed in the Design Review Submittal Schedule. CONTRACTOR shall not provide any design deliverables until the Design QC Plan is approved by SCDOT.
3. All submittal packages shall be uploaded electronically utilizing ProjectWise Deliverables Management and an email shall be sent to SCDOT that verifies the contents of the upload. A complete submittal package shall be limited to one phase (ex. Preliminary/Right of Way(ROW)/Final/Release For Construction (RFC)) of one roadway segment or structure and include all design deliverables specified in Exhibit 4z.
4. Prior to beginning any construction activities, permanent or temporary, the Traffic Management Plan and Conceptual Work Zone Traffic Control plans for the entire project shall be submitted by the CONTRACTOR and approved by SCDOT.
5. If approved by SCDOT, one Maintenance of Traffic submittal package, including but not limited to, an NPDES permit application and related plans, may be allowed to provide the opportunity to begin construction of non-permanent work items, such

as clearing and grubbing, shoulder strengthening, minor demolition not adversely impacting traffic or operations.

6. CONTRACTOR shall provide submittal packages as defined in Exhibit 4z. Prior to commencement of permanent construction activities on any defined segment or structure, SCDOT will have the right, but not the obligation, to review and comment upon all submittal packages pertaining to said segment or structure. SCDOT reserves the right to provide comments on the design or plans at any time when an issue is identified that is not compliant with the Project Design Criteria, the RFP or is an error or omission.
7. All documents of a submittal package must be uploaded utilizing ProjectWise Deliverables Management by 11:59PM for the review period to begin the next business day. No more than one new submittal package shall be uploaded utilizing ProjectWise Deliverables Management within a five business day period. SCDOT reserves the right to utilize Bluebeam Studio to facilitate design reviews between SCDOT and the CONTRACTOR. The initial review period for each submittal package shall be 15 business days following the date SCDOT receives an accurate and complete submittal in conformity with the contract. SCDOT review comments will be sent to the CONTRACTOR, who shall respond within five business days and prior to subsequent phase submittals. SCDOT will then status CONTRACTOR'S responses and will provide additional comments, if any, within five business days. If any open comments remain after the initial 15 day review and subsequent 5 day review and comment periods, there will be no time constraint for the CONTRACTOR to respond. For all subsequent rounds of CONTRACTOR responses, SCDOT will status CONTRACTOR'S responses and will provide additional comments, if any, within five business days. Review comments for Preliminary, ROW, and Final phases of each segment or structure shall be closed before the associated RFC plans are authorized to be submitted and prior to commencement of construction, demolition or disposal activities.
8. CONTRACTOR shall revise design deliverables and upload utilizing ProjectWise Deliverables Management for verification to allow SCDOT to close review comments. Verification design deliverables are not required for preliminary phase submittal packages. Verification design deliverables are required to close SCDOT comments in order to approve ROW and authorize RFC phase submittal packages. CONTRACTOR shall clearly identify and describe any changes made to a verification design deliverable that are unrelated to SCDOT review comments. A complete verification package shall include revised contents for all design deliverables with open SCDOT review comments and be submitted along with CONTRACTOR responses. After comments are closed and before RFC submittal packages are uploaded utilizing ProjectWise Deliverables Management, any changes made to design deliverables may, at the sole discretion of SCDOT, require a new submittal package be provided and require adjustment to the CONTRACTOR's Design Review Submittal Schedule.

9. The review and comment process is fully discretionary; however, no review or comment nor any failure to review or comment shall operate to absolve CONTRACTOR of its responsibility to design and build the Project in accordance with the contract or to shift responsibility to SCDOT.
10. SCDOT reserves the right to reject any submittal package that is deficient or incomplete. SCDOT will provide a written notice, including cause for rejection, for any submittal package that does not demonstrate the work can be completed in accordance with the Contract. Rejected submittal packages must be revised to comply with the Contract. Revised submittal packages will be considered a new submittal package and reviewed as described above. Rejected submittal packages shall not in any way serve to extend the Construction Time.
11. Bentley ProjectWise Explorer and Bentley CONNECT Services will be used as the Electronic Document Management System (EDMS) for the Carolina Crossroads program. Unless otherwise stated in this Agreement, the CONTRACTOR, including the Lead Designer, Lead Contractor, and Independent Quality Firm personnel, will interact with the EDMS via the Bentley CONNECT Services web portal. CONTRACTOR shall obtain and bear the cost of its own licensing with Bentley. Upon execution of the contract, CONTRACTOR shall provide documentation of Bentley licensing to SCDOT. Upon receipt of licensing documentation, SCDOT, or its designee, will grant CONTRACTOR access to the SCDOT Carolina Crossroads ProjectWise environment. CONTRACTOR is responsible for ensuring that any subcontractors and subconsultants of any tier having access to SCDOT data are required to employ good cyber threat preventative measures. CONTRACTOR shall use the National Institute of Standards and Technology's Risk Management Framework as its cybersecurity framework or other comparable frameworks and standards for cyber security protection. CONTRACTOR shall provide SCDOT, upon request, third party certifications to verifying implementation of an industry recognized cyber security framework during the Project. Other comparable cyber security frameworks include: NIST RMF; NIST CSF; ISO IES 27001/ISO 27002; SOC 2; IASME Governance; CIS Controls version 7; COBIT 5; FedRAMP; HIPAA; GDPR; FISMA; NERC CIP; HITRUST CSF.

E. Maintenance of Traffic

The SCDOT work zone mobility requirements found within the documents known as Rule on Work Zone Safety and Mobility: The Policy for South Carolina Department of Transportation and Rule on Work Zone Safety and Mobility: Implementation, Maintenance, and Safety Guidelines (Policy) shall apply to this Project. These requirements apply to the CONTRACTOR, all subcontractors, and designated representatives acting on behalf of the CONTRACTOR performing duties with responsibilities relative to a work zone, including but not limited to planning, project development, design, construction, and maintenance.

The CONTRACTOR shall design, develop, implement and maintain a set of coordinated strategies to manage the work zone impacts of the Project designated as the Transportation Management Plan (TMP). These strategies will include a Temporary Traffic Control plan, a Transportation Operations component, and a Community and Public Relation Support Plan component. The Policy referenced herein and the anticipated work zone impacts of the Project shall determine the level of detail, content, and scope of the TMP. The primary component, the Temporary Traffic Control plan shall address traffic control and safety throughout and adjacent to the Project site. A secondary component, the Transportation Operations plan, will address management of traffic operations in the Project site and all adjacent areas impacted by the Project. The final component, the Community and Public Relation Support Plan, addresses communications with the public and entities impacted by the Project. The CONTRACTOR's Transportation Management Plan and its components shall comply with the requirements of this Agreement and subsequent Exhibits, Part 6 of the Manual on Uniform Traffic Control Devices (MUTCD) latest edition, and SCDOT policies, standard specifications and all addendums to the standard specifications, the typical traffic control standard drawings for road construction, and procedures.

F. Ownership of Documents

Drawings, specifications, test data, inspection reports, QC documents, QA documents, daily diaries and any other documents, including those in electronic form, prepared by CONTRACTOR or CONTRACTOR's consultants/subcontractors are "Project Documents". CONTRACTOR and CONTRACTOR's consultants/ subcontractors shall be the owner of the Project Documents. Upon the Effective Date of this Agreement, CONTRACTOR grants SCDOT an irrevocable, perpetual, fully paid-up, worldwide, royalty free, nonexclusive license, with right to grant sublicenses, to reproduce the Project Documents for the purposes of, but not limited to, promoting, using, maintaining, upgrading, or adding to the Project. Unless stipulated in other portions of the Contract, upon completion of the Project or upon default by CONTRACTOR, CONTRACTOR shall provide copies of all Project Documents to SCDOT in the format designated by SCDOT.

G. Construction Criteria

CONTRACTOR shall construct the Project in accordance with all applicable Federal, State, and local statutes and regulations. All construction shall be performed in accordance with the following criteria, which are incorporated herein by reference and made a part hereof. The construction criteria are intended to be complementary and to describe and provide for a complete work. Where the following construction criteria conflict, the order of precedence shall be as listed below:

1. Approved Alternative Technical Concepts (ATCs) in CONTRACTOR's Response to RFP
2. **EXHIBIT 4, 6, 7, and 8** – Project Design Criteria

3. **EXHIBIT 5** – Special Provisions
4. Final Construction Plans provided by SCDOT
5. SCDOT Standard Drawings, effective as of the most recent Standard Highway Letting prior to the release of the Final RFP ([see Design Build Website - https://www.scdot.org/business/design-build.aspx](https://www.scdot.org/business/design-build.aspx))
6. SCDOT Supplemental Specifications and Supplemental Technical Specifications, effective as of the release of the Final RFP ([see Design Build Website - https://www.scdot.org/business/design-build.aspx](https://www.scdot.org/business/design-build.aspx))
7. SCDOT Standard Specifications for Highway Construction, effective as of the release of the Final RFP ([see Design Build Website - https://www.scdot.org/business/design-build.aspx](https://www.scdot.org/business/design-build.aspx))
8. Quality Assurance Program for the Carolina Crossroads Project draft.
9. SCDOT Construction Manual, effective as of the release of the Final RFP.
10. Qualified Products Policies and Qualified Products Lists are available on the SCDOT internet website.

H. Project Management

1. CONTRACTOR shall be responsible for ensuring that the Project is constructed in conformance with the Contract, all referenced documents and specifications, and applicable laws and regulations.
2. CONTRACTOR shall provide project management services sufficient to supervise the activities of his own personnel and subcontractors. CONTRACTOR shall provide a sufficient number of persons on site, to the satisfaction of SCDOT, to provide for the construction management, quality control, and quality acceptance responsibilities of the Project.
3. SCDOT and FHWA, if applicable, representatives will have unrestricted access to the Project, the work in progress, the “Daily Diaries”, and to other technical documents and project records associated with design, construction, demolition, material disposal, materials, quality control, quality assurance, materials installation, and testing. SCDOT will receive reasonable notice of and have the opportunity to participate in any meetings that may be held concerning the Project or the relationship between CONTRACTOR and its consultants and subcontractors when such meetings are associated with technical matters, progress, or quality of the Project. As used in this paragraph, “notice” shall require actual written notice to SCDOT or SCDOT’s Agent.

I. Control of the Work

1. CONTRACTOR shall determine the appropriate means, methods and scheduling necessary to complete the work timely and in accordance with all construction requirements. SCDOT and FHWA, if applicable, will have the right to review and inspect the work at any time.
2. If, at any time, SCDOT observes or has actual notice of any fault or defect in CONTRACTOR's performance of this Agreement, SCDOT will comply with the provisions of Article XVII, Default, Suspension and Termination. SCDOT is not required to discover or to accept defective or faulty work. SCDOT's right to have defective or faulty work promptly corrected shall not be waived by any action of SCDOT.
3. SCDOT will have the authority to suspend the work, in accordance with the Default, Suspension, and Termination Article of this Agreement.
4. No inspection, acceptance, payment, partial waiver, or any other action on the part of SCDOT will operate as a waiver of any portion of this Agreement or of any power reserved herein or any right to damages or other relief, including any warranty rights, except insofar as expressly waived by SCDOT in writing. SCDOT will not be precluded or estopped by anything contained herein from recovering from CONTRACTOR any overpayment as may be made to CONTRACTOR.

J. Contract Deliverables

CONTRACTOR shall submit deliverables including, but not limited to, the following as set forth in the CONTRACT. All deliverables shall contain proper references to both the Contract ID number and the appropriate Project ID number for that specific location. Deliverables noted below with an asterisk shall be included in the Design Review Submittal Schedule and follow Design Review procedures as outlined in Article II, Section D of the Agreement.

1. Contract Deliverable Matrix
2. All deliverables as specified in Exhibit 4z*
3. CPM Schedule, as specified in Article IV
4. Design Review Submittal Schedule including Gantt Chart of Submittals*
5. Schedule of Values, as specified in Exhibit 2
6. Design QC Plan*
7. Construction Quality Management Plan, as specified in the Quality Assurance Program for the Carolina Crossroads Project
8. Clearing and Grubbing Plan

9. CONTRACTOR's Erosion Control Plan
10. SCDHEC Notice of Intent (NOI) for Stormwater Discharges Covered Under SC NPDES Construction General Permit SCR160000) & Storm Water Pollutant Prevention Plan and signed Contractor Certification Form (SCDHEC 0437)
11. Wetland and Stream Mitigation
12. Crane Operator Documents
13. Community and Public Relations Support Plan, as specified in Article X and Exhibit 5
14. EEO, DBE, and OJT Requirements, as specified in Article XVIII & Exhibit 5
15. Right-of-Way documents, as specified in Article VIII
16. Escrow Proposal Documents
17. CONTRACTOR's Materials Certification
18. Railroad Coordination Documents & Insurance Certificates per Exhibit 6
19. HAZMAT surveys for structures not already surveyed, SCDHEC Notice of Demolition for Construction Manager for Mega Projects
20. Utility Coordination Reports, including Utility Agreements, and Supporting Documentation
21. Shop Plans and Working Drawings
22. As-Built Plans
23. Sustainability Action Plan

III. CONTRACT PRICE/CONTRACT PAYMENTS

A. Contract Price

The "Contract Price" shall be \$ _____. In consideration for the Contract Price, CONTRACTOR shall perform all of its responsibilities under the Contract. The Contract Price shall include all work identified in the Agreement and subsequent Exhibits and as identified in the Cost Proposal Bid Form – Exhibit 1.

B. Contract Price Adjustments

1. Allowable adjustments

The Contract Price may be adjusted to reflect the direct costs, plus an additional amount not to exceed 10% of the direct costs for the combined total of reasonable overhead* and profit, associated with any of the following:

- a. Amount added or deducted as the result of a “Change” or “Force Account Directive”.
- b. Differing Site Condition as defined in Article XIII.
- c. Intentional or bad faith acts or omissions by SCDOT that unreasonably interfere with CONTRACTOR’s performance and cause delay of work on the critical path of the Project.
- d. Changes in legal requirements or regulations that are effective subsequent to the date of submission of CONTRACTOR’s response to the RFP.
- e. Discovery of hazardous materials not previously identified in Exhibit 8 and Attachment B as set forth in Article XI
- f. Discovery of archeological or paleontological sites not previously identified as noted in Article X.
- g. Premium right of way cost subject to Article VIII and Second appraisals as set forth in Article VIII. Only the actual premium right of way and second appraisal cost will be reimbursed. No additional amount for overhead, profit, bonds and insurance will be considered for this item.
- h. Adverse utility relocation impacts meeting the requirements set forth in Article VII.
- i. Adverse Railroad coordination impacts as set forth in Article VII.

*Overhead: The operating expense of a business exclusive of direct cost labor and material.

Other than as provided above, the Contract Price shall not be increased for Contract Time extensions or delay damages. Contract Price adjustments shall be documented by Contract Change Request signed by both parties and shall be reflected immediately in the Schedule of Values. No claim by the CONTRACTOR for an adjustment hereunder shall be allowed if notice is not given prior to final payment under this Agreement.

2. Changes

- a. A “Change” shall be any deviation or variation from the Project Scope or the Project Criteria. No Change shall be implemented without the express written approval of SCDOT.

- b. SCDOT or the CONTRACTOR may initiate a “Contract Change Request” in writing in accordance with the Contract Change Request process in Exhibit 5. If SCDOT approves the change, CONTRACTOR shall perform the services as changed.

3. Force Account Directive

A Force Account Directive is a written order from SCDOT directing a change prior to agreement with CONTRACTOR on adjustment, if any, to the Contract Price or Contract Time. If a price for the work cannot be agreed upon, CONTRACTOR shall perform the work under Force Account Procedures as outlined in Section 109.5 of SCDOT’s Standard Specifications.

4. Direct Costs

For the purpose of a Contract Price Adjustment, “Direct Costs” shall be defined as:

- a. Costs of labor, including social security, old age and unemployment insurance, fringe benefits required by agreement or custom, and workers’ compensation insurance;
- b. Costs of materials, supplies, and equipment, including cost of transportation, whether incorporated or consumed;
- c. Actual costs of machinery and equipment owned by CONTRACTOR or any affiliated or related entity exclusive of hand tools;
- d. Actual costs paid for rental of machinery and equipment exclusive of hand tools;
- e. Costs of premiums for all bonds and insurance, permit fees, and sales, use or similar taxes;
- f. Additional costs of supervision and field office personnel directly attributable to the change or event; and
- g. Costs incurred or fees paid for design work related to the change or event.

C. Contract Payments

1. Schedule of Values

Prior to issuance of the Notice to Proceed, CONTRACTOR shall provide a Schedule of Values acceptable to SCDOT and work may not start until the Schedule of Values is approved by SCDOT. The Schedule of Values will serve as the basis for cost loading of the CPM Schedule. The CPM schedule shall include sufficient information to provide for monetary and quantitative tracking of the work by

SCDOT. Updates to the cost-loaded CPM schedule shall be made by a Contract Change Request and will serve as the basis for progress payments requested by and made to CONTRACTOR. If the Contract Price is adjusted by Contract Change Request, CONTRACTOR shall revise its Schedule of Values and the CPM Schedule to reflect the adjustment in the Contract Price. The revised Schedule of Values must be approved by SCDOT prior to the time for the subsequent request for a progress payment otherwise no progress payments will be made. The Schedule of Values shall be incorporated herein as **EXHIBIT 2**. The Schedule of Values shall include Lump Sum items that will serve as measurement and payment for any item referred to in this Contract as a “contract unit bid price” item.

2. Mobilization

Mobilization shall not exceed 10% of the Total Contract Price as shown in the Schedule of Values. Mobilization will be paid as shown in the table below.

Mobilization Payment No.	Payment Percentage of Mobilization SOV	Payable when:
1	5%	1 st Progress Payment following NTP
2	20%	Start of Construction
3	50%	10% of Price ¹ is earned
4	25%	25% of Price ¹ is earned

(1) Price is defined as Contract Price minus Mobilization Schedule of Value Amount

3. Periodic Progress Payment Applications

No application for payment of any portion of the Contract Price shall be submitted until SCDOT gives the Notice to Proceed. Applications for payment of any portion of the Contract Price may be submitted once a month. Each application for payment of the Contract Price shall set forth, in accordance with the Schedule of Values and the cost-loaded CPM schedule, the percentage of all items comprising the work completed since CONTRACTOR’s immediately prior request for payment. The application for payment of the Contract Price may also request payment for equipment and materials not yet incorporated into the Project, provided that (i) SCDOT is satisfied that the equipment and materials are suitably stored at either the Project or another acceptable location, (ii) the equipment and materials are protected by suitable insurance and (iii) upon payment, SCDOT will receive title to the equipment and materials free and clear of all liens and encumbrances.

4. Periodic Progress Payments

SCDOT will review each application for payment and respond within seven calendar days. SCDOT will generate an “Estimate Summary to Contractor” and

“Contractor Concurrence Form” for CONTRACTOR review. The “Contractor Concurrence Form”, with the attached “Estimate Summary to Contractor”, shall be the undisputed application for payment. SCDOT will make each payment within 21 calendar days of the receipt of the corresponding undisputed application for payment. In the event of a dispute over the quality of work or percentage of the Project completed, SCDOT’s decision is controlling and final. Payment by SCDOT will not preclude or estop SCDOT from correcting any measurement, estimate, or certificate regarding the percentage completion of the Project, and future payments may be adjusted accordingly.

5. Prompt Payment of Subcontractors

CONTRACTOR shall comply with the requirements of the SCDOT Prompt Payment Clause Supplemental Specification.

6. Withholding of Payment

SCDOT may withhold all or part of any payment under the Contract for any of the reasons listed below. Any funds withheld will be released upon CONTRACTOR satisfactorily remedying the defect, fault, or failure and will be included in the next regularly scheduled application for payment. Payment will be subject to retainage if applicable.

- a. Any CONTRACTOR default;
- b. Reasonable evidence that the Work will not be Substantially Complete within the Construction Time as adjusted and that the unpaid balance of the Contract Price will not be adequate to cover Liquidated Damages for the actual unexcused delay;
- c. Failure to comply with the prompt payment provision of this Contract;
- d. Any fines or other charges to SCDOT due to CONTRACTOR’s failure to comply with permit requirements or other regulations;
- e. Notice of cancellation of insurance;
- f. Failure to submit updated and approved CPM or Schedule of Values;
- g. Violation of Design QC Plan or Construction Quality Management Plan requirements;
- h. Failure to follow specifications or procedures required by the Contract;
- i. Failure to comply with DBE, On-The-Job training, or Pre-Employment Training provisions;

- j. Failure to provide adequate work zone traffic control;
- k. Failure to provide adequate sediment and erosion control; or,
- l. Violation of any contract provisions.

D. Retainage

Provided the Project is proceeding satisfactorily, SCDOT will not withhold retainage. However, if at any time SCDOT determines that CONTRACTOR fails to meet contract terms or the Project is not proceeding satisfactorily, SCDOT may retain up to 10% of the Contract Price as retainage.

IV. CONTRACT TIME

A. Project Schedule

1. Time for Completion of Project: Time is of the essence. The Project shall be Substantially Complete within 1074 calendar days from Notice to Proceed. The Notice to Proceed shall be no later than 45 days from the effective date of the Agreement. Final Completion shall be reached as defined in paragraph 7 below.
2. Contract Time: shall be the number of calendar days from effective date of agreement to Final Completion.
3. Construction Time: is defined as calendar days from Notice to Proceed to Substantial Completion on the Project.
4. Substantial Completion: When CONTRACTOR believes that it has reached Substantial Completion, it shall notify SCDOT in writing. Substantial Completion is the point in the Project when the work has been designed and constructed in accordance with the typical section in the plans over the entire length of the Project, including tie ins to adjacent projects or existing roads, all travel lanes in their final configuration are open to the public, traffic can move unimpeded through the Project at the normal, posted speed, all safety features are installed and are being properly maintained, no lanes will have to be closed to complete any remaining work, all required illumination is installed, functional, and operating, all required signs and signals are installed, functional and operating, all required ITS systems are installed, functional, ITS testing has been successfully completed, and the ITS is operational, all submittals required under the contract have been submitted and, as applicable, approved by SCDOT as to form and content, there exists no uncured default that is the subject of a notice (unless Substantial Completion will affect its full and complete cure) and all work is completed complies with applicable laws, permits, and has otherwise passed all demonstration, performance, and acceptance testing except for “Project Close-out Activities”. “Project Close-out Activities” are defined as punch list items, site clean-up, demobilization, and final Project documentation, including but not limited to as-built plans.

5. Critical Path Method Schedule: CONTRACTOR shall prepare and maintain a schedule for the Project using the Critical Path Method of scheduling (hereinafter called “CPM Schedule”). Prepare a Level II CPM Schedule in accordance with this agreement and the SCDOT Supplemental Specifications with the following exceptions:
- a. Submit to the SCDOT the initial baseline CPM schedule within 30 days from the Effective Date of this Agreement. No contract payment will be made to Contractor and no construction work may begin until a CPM baseline schedule is received and accepted by SCDOT. Update the baseline CPM schedule for monetary and quantitative tracking purposes as RFC plans are developed.
 - b. Cost-load the CPM schedule using the expenses identified in the schedule of values. Use the schedule of values to establish Expense Categories and assign to the correct activities.
 - c. Include submittal activities. Allow duration for these activities to include SCDOT review periods.
 - d. Reuse of deleted activity ID’s from schedule update to schedule update is not allowed.
 - e. Failure to include any element of work or any activity including but not limited to utility relocation, right of way acquisition, and permitting will not relieve the CONTRACTOR from completing all work within the Construction Time at no additional time or cost to the SCDOT, notwithstanding the acceptance of the schedule by SCDOT.
 - f. Develop project specific calendars reflecting all seasonal restrictions included in this Agreement and non-work days. Address durations for weather within activity duration, not within the calendar.
 - g. Use only a Work Breakdown Structure (WBS) to organize schedule activities. At a minimum, breakout the design and construction phases. These two breakouts should have the same parent within the structure.
 - h. Submit monthly updates no later than 15 days following the most recent estimate period end date, whether or not an estimate was generated. Set the data date the same as the most recent estimate period end date.
 - i. If SCDOT determines any schedule submission is deficient, it will be returned to the CONTRACTOR. A corrected schedule shall be provided within 7 calendar days from the SCDOT’s transmittal date.
 - j. The CONTRACTOR may plan for early completion; however, the schedule shall never reflect a completion date earlier than the original Substantial Completion date. SCDOT will not be liable in any way for CONTRACTOR’s

failure to complete the Project prior to the original Substantial Completion date. Any additional costs, including extended overhead incurred between CONTRACTOR's scheduled early completion date and the original Substantial Completion date, shall be the responsibility of the CONTRACTOR.

- k. Include in each narrative a detailed listing of crews utilized on activities and their responsibilities. In lieu of this, the Contractor may request to submit a Resource Loaded CPM schedule.
6. Progress Review Meetings: Review Meetings shall be held between CONTRACTOR and SCDOT at least every 2 weeks. Periodic construction meetings shall be held by CONTRACTOR with its consultants and subcontractors to coordinate the work, update the schedule, provide information and seek to resolve potential conflicts.

SCDOT and CONTRACTOR will hold a regular CPM Progress Meeting at which all principal parties are expected to attend. These meetings will be held the week before the application for payment is due so that job progress will coincide with the payment application. At this meeting, CONTRACTOR shall provide the most recent schedule with notations showing actual start dates, actual finish dates, and activity progress. If the schedule provided indicates an actual or potential delay to the completion of the Contract, CONTRACTOR shall provide a narrative identifying the problems, causes, the activities affected and describing the means and methods available to complete the Project by the Contract Time.

7. Final Completion: Final Completion shall be achieved within 180 calendar days of Substantial Completion as defined in this Agreement. When CONTRACTOR believes that all elements of its work on the Project, including all of the requirements of the Contract, have been completed, it shall notify SCDOT in writing. Within 30 days thereafter, SCDOT will acknowledge project completion or will advise CONTRACTOR in writing of any aspect of the Contract or the Project Scope that is incomplete or unsatisfactory. CONTRACTOR shall complete all corrective action within thirty (30) days after written notification of incomplete or unsatisfactory items. CONTRACTOR will notify SCDOT in writing upon completion of necessary corrective action. SCDOT will verify satisfactory completion of the corrective action in writing to CONTRACTOR. The number of days referenced above to achieve Final Completion does not include SCDOT's review period and the CONTRACTOR's corrective action time. Upon verification, the Project shall be deemed to have achieved Final Completion.
8. Long Stop: Long Stop Dates shall be defined as 90 calendar days after Substantial completion and 90 calendar days after Final Completion.

B. Time Extensions

Time may be extended if there is a delay to the critical path of the Project caused by an event listed below. All requests for time extensions shall be made in writing to SCDOT within 20 days of the event causing the delay. All time extensions must be approved in writing by SCDOT. Time extensions may be allowed for the following events that affect the critical path:

1. Force Majeure as that term is defined in this Agreement in Article XIV;
2. Changes or Force Account Directives;
3. Differing Site Conditions as defined under Article XIII;
4. Injunctions, lawsuits, or other efforts by individuals or groups that hinder, delay, or halt the progress of the Project, provided that such efforts are not premised on alleged wrongs or violations by CONTRACTOR or its subcontractors;
5. Interference with or delay of work on the critical path of the Project by SCDOT; however, CONTRACTOR shall not be entitled to a time extension if SCDOT's actions are necessitated by CONTRACTOR's actions, omissions, failure to perform quality work, or failure to comply with contract requirements;
6. Changes in the legal requirements or regulations which are effective subsequent to the date of this Agreement;
7. Discovery of hazardous materials not previously identified as set forth in Article XI;
8. Discovery of archeological or paleontological remains not previously identified as set forth in Article X; or
9. Adverse utility relocation impacts meeting the requirements set forth in Article VII.
10. Adverse Railroad coordination impacts as set forth in Article VII.
11. Adverse permit acquisition impacts as set forth in Article IX.
12. Failure or inability of SCDOT to make available for construction to CONTRACTOR any Hold-off Parcels by the respective time set forth for each hold-off parcel in the Right of Way Certification in Attachment B, provided that "make available for construction" means that:
 - a. SCDOT has obtained permanent right of entry through settlement, condemnation process or otherwise, which in each case may be subject to covenants, restrictions, and limitations with which the CONTRACTOR must comply; and

- b. SCDOT has completed relocation, and clearance (which includes data recovery for any identified cultural resources), except Utility Adjustments.

C. Owner’s Right to Stop Work

SCDOT will have the authority to suspend the work as set forth in Article XVII.

D. Liquidated Damages

CONTRACTOR shall pay liquidated damages to SCDOT in the amount of Sixteen Thousand Dollars (\$16,000) for each day for which the project is not substantially complete, as defined in Article IV.

CONTRACTOR shall pay liquidated damages to SCDOT in the amount of Four Thousand Dollars (\$4,000) for each day that Final Completion, as defined in Article IV, is not achieved.

The parties acknowledge, recognize and agree that because of the unique nature of the Project, it is difficult or impossible to determine with precision the amount of damages that would or might be incurred by SCDOT as a result of the CONTRACTOR’s failure to complete the Project as specified in the Contract. Therefore, any sums payable under this provision are in the nature of liquidated damages, and not a penalty, and are fair and reasonable and such payment represent a reasonable estimate of fair compensation for the losses that may reasonably be anticipated from such failure. Liquidated damages are SCDOT’s sole remedy for delayed completion; however, liquidated damages do not apply to CONTRACTOR’s liability for other contractual breaches, duties, or obligations.

V. CONSTRUCTION QUALITY ASSURANCE PROGRAM

CONTRACTOR shall execute its responsibilities for Quality Control (QC) and Quality Acceptance (QA) as outlined in the Quality Assurance Program (QAP) for Carolina Crossroads (CCR) in Attachment B. Work shall not commence until CONTRACTOR has met the requirements of the QAP for CCR, including submittal and approval of the CONTRACTOR’S Construction Quality Management Plan (CQMP). SCDOT or its designee will be responsible for the Owner Verification (OV) and Independent Assurance (IA) portions of the program to include conducting oversight inspections and testing.

The Independent Quality Firm’s (IQF) and SCDOT’s testing in no way relieves CONTRACTOR of its obligation to comply with the Contract requirements. All materials incorporated into the Project must meet or exceed contract requirements and specifications. Further, any testing by IQF or SCDOT will not relieve CONTRACTOR of any of its warranty obligations.

VI. INSURANCE AND BONDING

A. Insurance

1. CONTRACTOR shall purchase and maintain insurance using a company or companies that maintain an A.M. Best rating of not less than A-VII with coverage forms acceptable to SCDOT. The insurance described below shall be maintained uninterrupted for the duration of the Project, including warranty periods, and shall protect CONTRACTOR from claims set forth below which may arise out of or result from CONTRACTOR’s operations under the Contract, whether such operations be performed by CONTRACTOR or by any subcontractor or by anyone directly or indirectly employed by any of them or by anyone for whose acts any of them may be liable:

- a. Claims under workers’ or workmen’s compensation, disability benefit and other similar employee benefit acts;
- b. Claims for damages because of bodily injury, occupational sickness or disease, or death of CONTRACTOR’s employees;
- c. Claims for damages because of bodily injury, sickness or disease, or death of any person other than CONTRACTOR’s employees;
- d. Claims for damages insured by usual personal injury liability coverage which are sustained (1) by any person as a result of an offense directly or indirectly related to the employment of such person by CONTRACTOR, or (2) by any other person;
- e. Claims for damages, other than to the work itself, because of injury to or destruction of tangible property, including loss of use resulting therefrom;
- f. Claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle;
- g. Claims involving contractual liability insurance applicable to the Contractor’s obligations under the indemnity provisions of this contract; and
- h. Claims involving professional liability.

2. The minimum limits of liability for the following types of insurance are required, except where greater limits are required by statute:

- | | | |
|--|------------|----------------------------|
| a. Workers’ Compensation, Insurance/Employer’s Liability | including: | Worker’s Compensation |
| State Statutory limits | | Employer’s Liability |
| | | \$100,000 per accident |
| | | \$500,000 per disease |
| | | \$100,000 each employee |
| b. Commercial General Liability | | \$2,000,000 per occurrence |

\$4,000,000 annual aggregate

Commercial General Liability insurance shall be written on ISO occurrence form CG 00 01 (or substitute for providing equivalent coverage) and shall cover liability arising from premises, operations, independent contractors, products-completed operations, contractual liability and personal injury and advertising injury. The policy shall contain the per project endorsement.

- c. Business Automobile Liability \$1,000,000 per occurrence

This policy shall cover Any Auto, including Owned, Hired and Non-owned Automobiles. Business auto coverage shall be written on ISO form CA 00 01, CA 00 05, CA 00 12, CA 00 20, or a substitute form providing equivalent liability coverage.

- d. Umbrella Liability Coverage \$25,000,000 per occurrence
\$25,000,000 annual aggregate

The general aggregate limit shall apply separately to the Project.

- e. Professional Liability Coverage \$10,000,000 per claim
\$10,000,000 annual aggregate

This policy shall cover all claims arising from the performance of professional services on the Project (Professional Liability also known as Errors and Omissions Insurance). Evidence of such insurance shall be provided to SCDOT at the time of the execution of the Agreement. This policy is written on a claims-made basis and CONTRACTOR warrants that any retroactive date under the policy shall precede the effective date of this Contract; and that either continuous coverage will be maintained or an extended discovery period will be exercised for a period of eight (8) years beginning at the time worked under this Contract is completed. CONTRACTOR shall obtain, or require the Lead Designer to obtain, Professional Liability insurance for this Project.

3. Certificates of Insurance acceptable to SCDOT will be provided to SCDOT prior to execution of this Agreement. These certificates shall name SCDOT as an additional insured under the Commercial General Liability (CGL) arising out of both the on-going operations and completed operations of CONTRACTOR. Such additional insured coverage shall be endorsed to Contractor's CGL policy using ISO Additional Insured Endorsement form CG 2010 (10/01) and CG 2037 (10/01) or a substitute providing equivalent coverage, and included under the commercial umbrella. CONTRACTOR shall maintain continual additional insured status for SCDOT under the products-completed operations coverage for eight years after Substantial Completion. CONTRACTOR shall also name SCDOT as additional

insured under Business Automobile and Umbrella policies and reference the Project to which the certificate applies. The policies must contain a provision that coverage afforded will not be canceled until at least 30 days prior written notice has been given to SCDOT and that the policies cannot be cancelled for non-payment of premiums until at least 10 days prior written notice has been provided to SCDOT. Send Notice of Cancellations to Director of Construction Room 330, PO Box 191, Columbia, SC 29202. Make certain that the policies are endorsed to reflect this requirement. Verification of additional insured status shall be furnished to SCDOT by including a copy of the endorsements with the Certificate of Insurance. This insurance, including insurance provided under the commercial umbrella shall apply as primary and noncontributory insurance with respect to any other insurance or self-insurance programs, including any deductibles, afforded to, or maintained by, SCDOT. CONTRACTOR'S deductibles shall not exceed \$1,000,000 without written consent of the SCDOT and that the certificates show the deductible amounts. CONTRACTOR shall provide a notarized letter from a Certified Public Accountant showing that they have the financial ability to cover the amount of the deductible at the time of the execution of the agreement and for every year thereafter until the insurance obligation ends.

4. Limits shown in this provision are minimum acceptable limits and in no way limit available coverage to the additional insured. CONTRACTOR's CGL and commercial umbrella policies shall contain no provision providing that the limits available to an additional insured are less than the limits available to the CONTRACTOR. SCDOT shall be given all the same rights and insurance coverage as CONTRACTOR.
5. There shall be no endorsements or modifications of the CGL limiting the scope of coverage for liability arising from explosion, collapse, underground property damage or work performed by contractors on behalf of SCDOT.
6. Hazardous Materials: If the CONTRACTOR is required to remove and haul any hazardous waste from the Project, or if the Project involves such similar environmental exposure, pollution liability coverage equivalent to that provided under the ISO Pollution Liability – Broadened Coverage for Covered Autos Endorsement (CA 99 48), shall be provided, and the Motor Carrier Act Endorsement (MCS 90) shall be attached. Limits of pollution liability shall be not less than \$1,000,000 per occurrence and \$2,000,000 annual aggregate. Coverage shall apply on an "occurrence form" basis, shall cover at a minimum bodily injury, property damage, defense costs and clean-up costs and be extended to include non-owned disposal sites and transportation coverage. This insurance shall remain in effect after acceptance by Owner for the time period required to satisfy the statute of limitations in South Carolina. However, if coverage is written on a "claims made form", then the Contractor's Pollution Liability coverage shall include a retroactive date that precedes the commencement of work under this Agreement. Such coverage shall apply as primary and non-contributory insurance with respect to any other insurance or self-insurance programs, including any deductibles, afforded to,

or maintained by SCDOT. Pollution Liability policy must include contractual liability coverage.

7. Waiver of Subrogation: CONTRACTOR shall waive its rights against SCDOT, other additional insured parties, and their respective agents, officers, directors and employees for recovery of damages, or any other claims, to the extent these damages are covered by the CGL, business auto, pollution liability, workers compensation and employer's liability or commercial umbrella maintained pursuant to this section of the Agreement.
8. CONTRACTOR shall provide Builder's Risk Insurance acceptable to the SCDOT in the amount of the Contract Price protecting the respective interests of SCDOT and CONTRACTOR and covering physical loss or damage to the work during construction of the project. The certificate of insurance shall be provided to the SCDOT at the time of execution of this Agreement. The CONTRACTOR shall also obtain \$1,000,000 in Delay in Start Up Coverage under the Builder's Risk policy. The policy shall name the SCDOT as an additional insured and shall reference the Project by name. The certificate shall also state that the coverage will not be cancelled or reduced without 30 days prior written notice to the SCDOT.
9. After Final Completion of the work, CONTRACTOR shall maintain CGL, professional liability, and commercial umbrella coverage to include liability coverage for damage to insured's completed work equivalent to that provided under ISO CG 00 01 for eight years after substantial completion.
10. By execution of the contract, the CONTRACTOR accepts the responsibility to provide the liability insurance policies and endorsements as specified herein. Failure of SCDOT to identify a deficiency in the Certificate of Insurance submitted by the CONTRACTOR's insurance agent as evidence of the specified insurance or to request other evidence of full compliance with the liability insurance specified shall not be construed as a waiver of the CONTRACTOR's obligation to provide and maintain the required insurance for the duration of the contract. The CONTRACTOR shall assess its own risks and if it deems appropriate and/or prudent, maintain higher limits and/or broader coverages. The CONTRACTOR is not relieved of any liability or other obligations assumed or pursuant to the Contract by reason of its failure to obtain or maintain insurance in sufficient amounts, duration, or types.

B. Bonding

1. CONTRACTOR shall at the time of the execution of this Agreement, provide SCDOT the following bonds:
 - a. A Performance and Indemnity Bond from a surety or sureties satisfactory to SCDOT. The amount of bond shall be equal to the Contract Price.

- b. A Payment Bond from a surety or sureties satisfactory to SCDOT. The amount of bond shall be equal to the Contract Price.

These bonds shall be in accordance with the requirements of S.C. Code Ann. §57-5-1660, (1976 as amended) and S.C. Code Ann. §29-6-250 (2000). Bonds shall be issued by a surety company licensed in the State of South Carolina with an “A” minimum rating of performance as provided in the most current publication of “A.M. Best Key Rating Guide, Property Liability” and signed by the surety's agency or attorney-in-fact. Surety must be listed on the current U.S. Department of the Treasury Financial Management Service list of approved bonding companies as approved for an amount equal to or greater than the amount for which it obligates itself in the Bond. If surety qualifies by virtue of its Best's listing, the amount of the Bond may not exceed ten percent of policyholders' surplus as shown in the latest A.M. Best's Key Rating Guide.

2. CONTRACTOR shall also provide a warranty bond, acceptable to SCDOT, in the amount of \$5,000,000 to cover the warranty obligations of the contract.

VII. UTILITIES AND RAILROAD COORDINATION

A. Definitions:

For purposes of this Article VII, the following terms have the meanings ascribed:

1. **Betterment** generally means any upgrading of such Utility during the course of a Utility Adjustment that is not attributable to the construction of the Project and is made solely for the benefit of and at the election of the Utility Owner, including an increase in the capacity, capability, efficiency or function of the facility over that which was provided by the existing Utility. The following are not “Betterments”:
 - a. any upgrading which is required for accommodation of the Project;
 - b. replacement devices or materials that are of equivalent standards although not identical;
 - c. replacement of devices or materials no longer regularly manufactured with an equivalent or next higher grade or size;
 - d. any upgrading required by applicable law;
 - e. replacement devices or materials that are used for reasons of economy (e.g., non-stocked items may be uneconomical to purchase); and
 - f. any upgrading required by the Utility Owner’s applicable Standards.
2. **Concurrent Delays** are two separate and independent delays that both delay the critical path at the same time. Concurrent Delays can occur when a Contractor-

caused delay is concurrent with an owner-caused delay, when a delay that is the responsibility of neither the Contractor nor the owner is concurrent with an owner-caused delay, or when a Contractor-caused delay is concurrent with a delay that is the responsibility of neither the contractor nor the owner. In each of these scenarios, the Contractor is entitled to an extension of Contract Time but is not entitled to recover additional time-related costs for the period of concurrency.

3. **Incidental Utility Work** means all of the following work necessary for the construction of the Project:
 - a. Temporary Relocations;
 - b. Relocations of Service Lines;
 - c. Protections in Place;
 - d. The adjustment of utility appurtenances (e.g., manholes, valve boxes, and vaults) for line and grade upon completion of roadway work;
 - e. All work necessary to remove any utilities (whether or not in use as of the effective date of this Agreement) in situations for which leaving the utilities in place is not feasible or not permitted, or for facilities which the CONTRACTOR proposes be removed to accommodate or permit construction of the Project, regardless of whether replacements for such utilities are being installed in other locations; and
 - f. All work necessary to abandon in place any utility in accordance with proper procedures (e.g., flushing, capping, slurry backfill, etc.).
4. **In-Contract Utility Work** means Utility Work that is performed by the CONTRACTOR for a Utility Owner that has chosen to have Utility Adjustments, Protection in Place, or other disposition of the Utility Owner's utility facility with respect to the Project be performed by CONTRACTOR
5. **Materially Inaccurate** means with respect to the description or identification of a Utility provided in the Utility information as set forth in Attachment B:
 - a. The existence of an underground utility (excluding appurtenances and Service Lines) that conflicts with the Project shall be considered a material inaccuracy if the utility is not identified at all in the Utility information
 - b. The Utility information as set forth in Attachment B regarding the size of an underground utility shall be considered materially inaccurate if one of the following applies, with regard to any difference (whether larger or smaller) between the utility's actual inside diameter, excluding appurtenances (the "actual size") and the inside diameter indicated for such utility in the Utility information (the "stated size"):

- i. The utility’s stated size is 12” or less, and the utility’s actual size is 24” or more,
 - ii. The utility’s stated size is greater than 12” but less than or equal to 36”, and the utility’s actual size differs from the stated size by more than 50% of the stated size,
 - iii. The utility’s stated size is greater than 36” but less than or equal to 72”, and the utility’s actual size differs from the stated size by more than 25% of the stated size, or
 - iv. The utility’s stated size is greater than 72”, and the utility’s actual size differs from the stated size by more than 15% of the stated size.
6. **Prior Rights** means where a utility occupies a strip of land by fee simple title, easement or other legal means. The utility must prove their claim of rights by supplying a document that clearly shows the utility’s rights predates the SCDOT’s right-of-way acquisition.
7. **Protection in Place** means any action taken to avoid damaging a utility facility which does not involve removing or relocating that facility, including but not limited to staking the location of a facility, exposing the facility, locating construction equipment so as to avoid impacts to facilities, installing steel plating or concrete slabs, encasement in concrete, temporarily de-energizing power lines, and installing physical barriers. For example, temporarily lifting power lines without cutting them would be considered a Protection in Place; whereas temporarily moving power lines to another location after cutting them would be considered a phased Utility Adjustment and not a Protection in Place. The term “Protection in Place” includes both temporary measures and permanent installations meeting the foregoing definition.
8. **Service Line** means a utility line, the function of which is to connect directly the improvements on an individual property (e.g., a single family residence or an industrial warehouse) to another utility line located off such property, which other utility line connects more than one such individual line to a larger system, as well as any cable or conduit that supplies an active feed from a Utility Owner’s facilities to activate or energize a Governmental Entity’s local lighting and electrical systems, traffic control systems, street lights, communications systems and/or irrigation systems.
9. **Temporary Relocation** means any (a) interim relocation of any utility facility (i.e., the installation, removal and disposal of an interim facility) pending installation of a permanent utility facility in the same or a new location, and (b) removal and reinstallation of the utility facility in the same place without an interim relocation.
10. **Utility or utility** means a privately, publicly, or cooperatively owned facility (which term includes lines, systems and other facilities, and includes municipal

and/or government facilities as defined under state law) for transmitting or distributing communications, cable television, power, electricity, gas, oil, crude products, water, steam, waste, or any other similar commodity including any fire or police signal system as well as streetlights associated with roadways owned by local agencies. However, when used in the context of Utility Adjustments of facilities to accommodate the Project, the term "Utility" or "utility" excludes (a) storm water facilities, and (b) traffic signals, ramp metering systems, flashing beacon systems, and lighting systems for the Project. The appurtenances to each utility facility shall be considered part of the facility, including the utility source, guide poles, Service Lines, supports, etc. Without limitation, any service lateral connecting directly to a utility shall be considered an appurtenance to that utility, regardless of the ownership of such service lateral. The appurtenances to each utility facility shall be considered part of the facility.

11. **Utility Adjustment** means each relocation (temporary or permanent), abandonment, Protection in Place, removal (of previously abandoned utility facilities as well as newly-abandoned facilities), replacement, rearrangement, reinstallation, necessary safety and protective measures, and/or modification of existing Utilities necessary to accommodate the Project or CONTRACTOR's work and necessary for the continuous operation of the system's service. The term "Utility Adjustment", however, excludes work associated with facilities owned by any railroad. For any utility crossing the Project's right of way, the Utility Work for each crossing of the Project's right of way by that utility shall be considered a separate Utility Adjustment. For any utility installed longitudinally within the Project's right of way, the Utility Work for each continuous segment of that utility located within the Project's right of way shall be considered a separate Utility Adjustment. The term "Utility Adjustments" specifically excludes any work relating to storm water facilities providing drainage for the Project's right of way. The term "relocation," or "adjustment," or words of similar meanings used in any Utility Agreements have the same meaning as "Utility Adjustment".
12. **Utility Agreement** means an agreement between a Utility Owner and SCDOT relating to the Utility Adjustment, Protection in Place, or other disposition of the Utility Owner's utility facility with respect to the Project. Utilities are either agreements where the Utility Owner has Prior Rights to be on the right of way and SCDOT is responsible for Utility Work costs, or encroachment permits where the Utility Owner does not have prior rights and where the costs for Utility Work is borne by the Utility Owner.
13. **Utility Owner** means the operator of any Utility (including both privately held and publicly held entities, cooperative utilities, and municipalities and other governmental agencies as defined under state law).
14. **Utility Standards** means the standard specifications, special provisions, standards of practice, Standard Material & Construction Specifications, and construction methods that a Utility Owner customarily applies to facilities (comparable to those

utility facilities that are the subject of a Utility Adjustment or Protection in Place on account of the Project) constructed by the Utility Owner (or for the Utility Owner by its contractors). The term includes “Design Criteria” (Criteria) which are the standard Design Criteria of the Utility for capital projects as provided by the Utility.

15. **Utility Work** means the design and construction necessary for a Utility Adjustment, including any Incidental Utility Work necessary for the Utility Adjustment. Any Utility Work furnished or performed by CONTRACTOR is part of the CONTRACTOR’s scope of work; any Utility Work furnished or performed by a Utility Owner is not part of CONTRACTOR’s scope of the work.

B. General Obligations

1. CONTRACTOR shall be responsible for coordinating the Project construction and demolition activities with all Utilities that may be affected by the Project. This includes coordination with Utilities that perform their own Utility Work and coordination with Utilities that have chosen the CONTRACTOR to perform In-Contract Utility Work.
2. CONTRACTOR shall ensure completion of all Utility Adjustments that are necessary or desirable (according to CONTRACTOR’s design of the Project) to accommodate the Project in accordance with the then-current CPM Schedule.
3. CONTRACTOR shall be responsible for all conflict avoidance measures, including all temporary relocation costs, if applicable, and eliminating any conflicts as among all Utilities within the Project’s right of way. This includes performing such design work, and coordinating to avoid conflicts, including specifically where Utilities from different Utility Owners are co-located or closely located. Contractor shall ensure that each relocated utility does not present a current or future conflict with the Project or other Utility Adjustments, including any conflicts or design work necessary to accommodate the utility relocations in Phase 3 of the CCR Project as shown on the Right of way plans in Attachment B. The resolution of any conflicts between utility companies and the construction of the Project shall be the responsibility of the CONTRACTOR. If said Utility interferes or fails to relocate conflicting utilities in a timely manner, see Delay Relief section below.
4. CONTRACTOR shall conduct a reasonable investigation of the Project work site prior to commencement of any construction work in any particular area to facilitate proper identification of all utility facilities in that area and include in its design work all such utility facilities so as to minimize disruption to Utilities and Utility Owners’ normal operations, to avoid conflicts between or among Utilities and the completed Project where possible, and to minimize conflicts where conflicts cannot be avoided. If there is a dispute between the CONTRACTOR and SCDOT as to whether a utility relocation is required, SCDOT shall have the final determination.

5. CONTRACTOR shall coordinate, monitor and otherwise undertake the necessary efforts to cause Utility Owners performing their own Utility Adjustments to perform such work timely, in coordination with the CONTRACTOR'S work under this Agreement, and in compliance with the standards of design and construction and other applicable requirements specified in the Agreement.
6. CONTRACTOR shall ensure that all Utility Work performed by or on behalf of CONTRACTOR complies with the requirements of this Agreement and any applicable Utility Agreements.
7. CONTRACTOR is responsible for complying with the utility documents provided in Attachment B.

C. Specific Obligations

1. CONTRACTOR shall not commence, or permit a Utility Owner under a Utility Agreement or under an encroachment permit to commence, any Utility Work until the following conditions have been satisfied:
 - a. All governmental approvals or permits necessary to begin Utility Work on that portion of the Project's right of way have been obtained, and CONTRACTOR has furnished, or caused to be furnished, to SCDOT fully executed copies of any such approvals or permits;
 - b. All rights of access acceptable to SCDOT, in its discretion, for such portion of the Project have been identified and obtained, as applicable, including resolution of disputes relating to Prior Rights;
 - c. The SCDOT has notified the CONTRACTOR that the subject Utility Adjustments are covered by an executed Utility Agreement;
 - d. CONTRACTOR shall prepare the encroachment permit on behalf of the Utility Owner and shall submit it to the Utility Owner for execution and submission to SCDOT. No Utility Work shall be commenced until the encroachment permit has been approved by SCDOT; and
 - e. CONTRACTOR has satisfied any other requirements or conditions to commencement of Utility Work set forth under Exhibit 7.
2. If the Utility Owner disputes that SCDOT has senior real property rights in such portion of the Project's right of way, then CONTRACTOR shall promptly notify SCDOT, and SCDOT shall be responsible for addressing the dispute. As between CONTRACTOR and SCDOT, SCDOT shall have final determination of the Utility Owner's real property rights and specifically who, as between SCDOT and the Utility Owner, which entity has Prior Rights.

3. CONTRACTOR shall provide timely design information reasonably required by the Utility Owner under Utility Agreements and encroachment permits.
4. CONTRACTOR shall address any requests by Utility Owners that CONTRACTOR design and/or construct a Betterment. Any Betterment performed as part of a Utility Adjustment, whether by CONTRACTOR or by the Utility Owner, shall be subject to the same standards and requirements as if it were a necessary Utility Adjustment, and shall be documented under an agreement between the CONTRACTOR and the requesting Utility Owner. Under no circumstances shall CONTRACTOR proceed with any Betterment that is not part of the Project criteria and CONTRACTOR scope of work, unless approved by SCDOT. Betterments shall not be performed that are incompatible with the Project or are not in compliance with applicable law, governmental approvals or permits obtained for the Project, this Agreement, or the CPM Schedule. Under no circumstances will CONTRACTOR be entitled to any additional compensation or time extension hereunder as the result of any Betterment, whether performed by CONTRACTOR or by the Utility Owner. CONTRACTOR may, but is not obligated to, design and construct Betterments.

D. Costs

1. CONTRACTOR shall be responsible for the cost of all the utility coordination unless defined otherwise herein.
2. CONTRACTOR shall be responsible for all In Contract Utility Work.
3. CONTRACTOR shall bear all costs and delay risks associated with any repeated Utility Adjustments as a result of the CONTRACTORs design of the Project. CONTRACTOR shall not be responsible for any repeated Utility Adjustments for errors or omission caused by the Utility's design or construction.
4. Utility Adjustments, whether Temporary Relocations or otherwise, that in each case are desired by the CONTRACTOR for but not limited to construction staging, access or convenience, shall be the sole responsibility of CONTRACTOR and all associated costs shall be borne by the CONTRACTOR.
5. CONTRACTOR is responsible for all costs associated with relocating utility facilities owned by SCDOT.
6. For those utilities that have prior rights SCDOT will be responsible for permanent relocation costs as defined by the Federal code, except for In-Contract Utility Work performed for Utilities with Prior Rights. For those utilities where the CONTRACTOR determines that the SCDOT has prior rights, CONTRACTOR may exercise these rights and require the Utility to bear the costs of relocation.

E. Certain Payment Terms

Nothing in this Article VII shall be construed to prohibit CONTRACTOR from entering into agreements with Utility Owners to perform Utility Adjustments under Utility Agreements or encroachment permits; provided, however, that CONTRACTOR shall not be entitled to any additional costs or schedule relief under this Agreement arising out of performing such services for the Utility Owners.

F. Standards of Performance

CONTRACTOR shall perform coordination for all Utility Work in accordance with the relevant Utility Owner's Utility Standards, SCDOT's "A Policy for Accommodating Utilities on Highway Rights of Way", the applicable State laws, and the Code of Federal Regulations, Title 23, Chapter 1, Subchapter G, part 645, subparts A and B, and in coordination with the SCDOT's Utility Office. In the event of a conflict among the foregoing technical requirements, the provisions that establish the higher quality, manner or method of performing the Utility Work, establish better practice (as determined by SCDOT or Utility Owner in their discretion), shall be used only if the more stringent standards prevail.

G. Failure of Utility Owners to Cooperate provisions

1. CONTRACTOR shall notify SCDOT promptly if:

- a. CONTRACTOR is unable (or anticipates that it will be unable), after diligent efforts, to reach agreement with a Utility Owner on any agreement or arrangement necessary for CONTRACTOR to perform any Utility Work, or for Utility Owner to perform any Utility Adjustments under Utility Agreement or under encroachment permit, in either case within a reasonable time,
- b. (b) CONTRACTOR reasonably believes for any other reason that any Utility Owner would not undertake or permit a Utility Adjustment in a manner consistent with the timely completion of the Project,
- c. CONTRACTOR becomes aware that any Utility Owner is not cooperating in a timely manner to provide agreed-upon work or approvals, or
- d. Except as expressly stated otherwise in this Article VII, any other dispute arises between CONTRACTOR and a Utility Owner with respect to the Project, despite CONTRACTOR's diligent efforts to obtain such Utility Owner's cooperation or otherwise resolve such dispute.

2. Such notification may include a request that SCDOT assist in resolving the dispute or in otherwise obtaining the Utility Owner's timely cooperation. CONTRACTOR shall provide SCDOT with such information as SCDOT requests regarding the Utility Owner's failure to cooperate and the effect of any resulting delay to the critical path reflected on the then-current CPM Schedule. After delivering to SCDOT any such notification or request for assistance, CONTRACTOR shall continue to use diligent efforts to pursue the Utility Owner's cooperation.

3. If CONTRACTOR requests SCDOT's assistance pursuant to the above paragraph, then, subject to clause G.4 below, the following provisions shall apply:
 - a. CONTRACTOR shall provide evidence reasonably satisfactory to SCDOT that (i) the subject Utility Adjustment is necessary, (ii) the time for completion of the Utility Adjustment in the then-current CPM Schedule was, in its inception, a reasonable amount of time for completion of such work, (iii) CONTRACTOR has made diligent efforts to obtain the Utility Owner's cooperation, and (iv) the Utility Owner is not cooperating. (The foregoing clauses G(1)(a) through (d) are referred to herein as the "conditions to assistance").
 - b. Following SCDOT's receipt of satisfactory evidence, SCDOT shall take such reasonable steps as CONTRACTOR may request to obtain the cooperation of the Utility Owner or resolve the dispute; however, SCDOT shall have no obligation to pursue legal proceedings, or to exercise any other remedy available to it under applicable law or existing contract, unless SCDOT elects to do so in its sole discretion.
 - c. Any assistance SCDOT provides shall not relieve CONTRACTOR of its sole responsibility for satisfactory compliance with its obligations and timely completion of all Utility Work, except as otherwise expressly set forth herein.
4. If SCDOT objects in writing to a request for assistance pursuant to the above clause, based on CONTRACTOR's failure to satisfy one or more of the conditions to assistance, then CONTRACTOR shall take such further action as is appropriate to satisfy the condition(s) (and as pertains to conditions G.1.(c) and G.1.(d), take such action within the succeeding ten days to obtain the Utility Owner's cooperation) and shall then have the right to submit another request for assistance on the same subject matter. No resubmittal will be accepted unless all SCDOT objections have been addressed in accordance with this clause 4. This process shall be followed until CONTRACTOR succeeds in obtaining the Utility Owner's cooperation or in otherwise resolving the dispute or until SCDOT determines, based on evidence CONTRACTOR presents, the conditions to assistance have been satisfied.

H. Relief for Certain Utility-Related Circumstances

1. CONTRACTOR shall have no right to make a claim under this clause, and shall bear either or both of any additional costs or delays to the then-current CPM Schedule, arising out of, relating to, or resulting from any breach of this Agreement any negligence, recklessness, willful misconduct, fraud, or violation of any applicable law, governmental approval or permit by or on behalf of CONTRACTOR. CONTRACTOR shall bear the burden of proving that any delay to the CPM Schedule could not have reasonably been mitigated or avoided. Furthermore, CONTRACTOR hereby acknowledges and agrees that it has assumed all risks with respect to the need to effect all Utility Adjustments required for the Project

2. So long as CONTRACTOR has met its burden of proof described in above and has achieved the conditions for SCDOT's assistance, where SCDOT's efforts were unable to mitigate or remove the impediment to the progress of the Utility Work, then, subject to the below listed criteria CONTRACTOR shall be entitled to a change order that provides for, in each case without double counting for Concurrent Delays for which CONTRACTOR would otherwise be entitled to relief:
 - a. Additional time, on a day-by-day basis, to achieve Substantial Completion for each day of delay to the CPM Schedule caused by or will result in an identifiable and measurable delay of an activity on the critical path under the then-current CPM Schedule, after consumption of all then-available float for:
 - i. Utility Owner's failure to meet any time parameters for performance in the Utility Agreement(s) to which it is a party
 - ii. Utility Owner's unreasonable refusal to approve relocation of a utility facility within the boundaries of the Project right of way
 - iii. delays by Utility Owner's under Prior Rights arrangements
 - iv. delays by utilities under encroachment permit
 - v. delays caused by Materially Inaccurate Utility information with respect to underground utilities only (excluding Service Lines)
 - vi. delays directly attributable to any material modification to the terms and conditions of any Utility Agreement after the effective date that has a material impact on CONTRACTOR's obligations under this Agreement.
 - b. Within the first 180 days from notice to SCDOT of impacts to the critical path, the burden of actual, direct, and documented costs incurred which are solely and directly attributable to the delays described in clauses (i.), (ii.), (iii.), and (iv) above, are that of the CONTRACTOR. Then after 180 days CONTRACTOR and SCDOT shall share the cost equally until day 360. After 360 days, from notice of impact to the critical path, SCDOT shall bear the remaining costs;
 - c. The burden of actual, direct, and documented costs incurred which are solely and directly attributable to the delays described in clauses (v) and (vi) above, are those of the SCDOT.
3. CONTRACTOR's entitlement to a change order under clause 2 above is subject to the following additional limitations:
 - a. CONTRACTOR shall not be entitled to any disruption damages in connection with any additional costs claimed with respect to any utility-related delay claims.

- b. CONTRACTOR shall not be entitled to any punitive, indirect, special, incidental, or consequential damages in connection with any additional costs claimed pursuant to clause 2 above;
- c. Delay costs shall be limited to those as listed in Section 105.16.5 of the SCDOT standard specifications 2007 as revised;
- d. CONTRACTOR shall not be entitled to an extension of time or additional costs if the delay arising out of, relating to, or resulting from any of the basis for a claim in this Article VII pertaining to Utilities is concurrent with any other unrelated delay (Concurrent Delay) to an activity on the critical path under the then-current CPM Schedule for which CONTRACTOR is responsible under this Agreement;
- e. CONTRACTOR shall not be entitled to any relief under clause 2(e) above, Materially Inaccurate Utility information if the existence of a Utility in the correct location and/or size, as applicable, was known to CONTRACTOR, or an person or entity for which CONTRACTOR is legally responsible, as of the submission of the Cost Proposal or would have become known to CONTRACTOR as of such date by undertaking a Reasonable Investigation, as defined in Article XIII, Differing Site Conditions.

If Railroad property is impacted by this project, the following provisions shall apply:

I. Railroad Coordination

- 1. CONTRACTOR shall be responsible for all coordination, monitoring, and otherwise undertake the necessary efforts to work with the involved Railroad or Railroad Companies (Railroad), including but not limited to, sending plans, meetings, correspondence, phone calls, writing/reviewing right of entry agreement, as may be necessary to perform work on or within 50 feet of Railroad property, needed for the construction of the Project. All correspondence shall include the Railroad file number and Railroad milepost information. CONTRACTOR shall provide Project specific information and Railroad coordination material to SCDOT as set forth in Exhibit 6.
- 2. As the Railroad may update such information from time to time, CONTRACTOR shall bear the additional burden as well as benefit from any reduced burden in connection with any such updated information without adjustment to the Contract Time or the Contract Price; provided, however, that such updated information shall be part of these technical requirements without further action by the Parties; provided, further, that if SCDOT desires that CONTRACTOR perform some or all of the original scope of the work as relates to Railroad's reduced burden, then CONTRACTOR shall comply with such direction, without abrogating CONTRACTOR's responsibility for the design of the Project.

3. CONTRACTOR's obligation relating to insurance policies and processes shall be deemed additional insurance-related obligations of the CONTRACTOR under this Agreement.

J. Right of Entry

CONTRACTOR shall apply for and obtain approval from the Railroad for all required right of entry agreements necessary for the Project, including but not limited to, surveys, boring, etc. CONTRACTOR shall provide a copy of the right of entry agreement to SCDOT prior to entering the Railroad's property. The CONTRACTOR shall apply for right of entry 120 days prior to commencing work where right of entry is necessary. CONTRACTOR shall comply with the conditions of entry and right of way/real property interest document requirements in Exhibit 6.

K. Approved Plans

CONTRACTOR shall perform work on Railroad property in accordance with plans, specifications, special provisions and Railroad manuals set forth in Exhibit 6. CONTRACTOR shall not perform work until the CONTRACTOR's plans have been approved by the Railroad. Any revision to the approved plans shall not be carried out until the Railroad provides CONTRACTOR written approval of the revisions.

L. Railroad Costs, Railroad Design Reviews

1. CONTRACTOR shall be responsible for the cost of Railroad coordination, and Railroad services provided by the Railroad or the Railroad's agent that exceeds the estimated costs as set forth in the Railroad Agreement provided in Attachment B, or as modified by an approved ATC. This includes all expenses such as Railroad flagging operations and Railroad design reviews. Railroad flagging operations cost shall include the prevailing industry flagging rate plus overhead for the flagging expenses and associated flagging condition, including any inflation or rate increases. CONTRACTOR shall establish appropriate design review time frames and package submittals, consistent with Article II, as may be requested by the Railroad, in order to mitigate the costs for Railroad review of Project plans.
2. CONTRACTOR shall also be responsible for all costs associated with designing and constructing the Project on or within Railroad Property or right of way. This includes cost associated with excavation, hauling, and disposing of excavated material, in compliance with the Railroad Public Project Manual and Railroad Agreement as set forth in Exhibit 6. For purposes of this Project and the Railroad Soil and Water Management Policy of the Railroad Public Projects Manual, the CONTRACTOR shall not reuse excavated material or soils generated from Railroad property on Railroad Property. CONTRACTOR shall consider any excavated material from Railroad property as hazardous material and dispose of such material in a Railroad approved disposal facility per the Railroad Public Projects Manual.

M. Relief for Certain Railroad Costs, Delays

1. CONTRACTOR shall have no right to make a claim under this clause, and shall bear either or both of any additional costs or delays to the then-current CPM Schedule, arising out of, relating to, or resulting from any breach of this Agreement or of the provisions of the Railroad Agreements assigned or delegated to CONTRACTOR, any negligence, recklessness, willful misconduct, fraud, or violation of any applicable law, governmental approval or permit by or on behalf of CONTRACTOR. CONTRACTOR shall bear the burden of proving that any delay to the CPM Schedule could not have reasonably been mitigated or avoided. Furthermore, CONTRACTOR hereby acknowledges and agrees that it has assumed all risks with respect to the need to work with the Railroad.
2. So long as CONTRACTOR has met its burden of proof described above, then, subject to the below, CONTRACTOR shall be entitled to a Contract Change Request that provides for, in each case without double counting for Concurrent Delays for which CONTRACTOR would otherwise be entitled to relief:
 - a. Additional time, on a day-by-day basis, to achieve Substantial Completion for each day of delay to the CPM Schedule which results in an identifiable and measurable delay of an activity on the critical path under the then-current CPM Schedule, after consumption of all then-available float.
 - b. Actual, direct, and documented costs incurred solely and directly attributable following notification of impacts to the CPM Schedule in excess of 90 days of delay. The 90 days may comprise consecutive impact periods. After 90 days the CONTRACTOR and SCDOT shall share delay costs on an equal basis for 91-180 days. After 180 days SCDOT will be responsible for cost of impacts to the CPM Schedule.
3. Contractor's entitlement to a change order above is subject to the following additional limitations:
 - a. CONTRACTOR shall not be entitled to any disruption damages in connection with any additional costs claimed with respect to any Railroad-related delay;
 - b. CONTRACTOR shall not be entitled to any punitive, indirect, special, incidental, or consequential damages in connection with any additional costs claimed above;
 - c. Delay costs shall be limited to those as listed in Section 105.16.5 of the SCDOT Standard Specifications for Highway Construction, 2007 as revised; and
 - d. CONTRACTOR shall not be entitled to an extension of time or additional costs if the delay arising out of, relating to, or resulting from Railroad participation

in the Project is concurrent with any other unrelated delay to an activity on the critical path under the then-current CPM Schedule for which CONTRACTOR is responsible under this Agreement.

N. Progress Payments Reduction

SCDOT shall review and administer the invoices for costs received from the Railroad. The approved Railroad invoiced amount that exceeds the estimate costs set forth in the Railroad Agreement provided in Attachment B, or as modified by an approved ATC, will be deducted from CONTRACTOR's progress payments after payments are made to the Railroad.

O. Separate Utility Agreement

CONTRACTOR is advised that all utility relocations required within railroad right of way or property will require separate agreements between the affected Utility Owner and the Railroad. CONTRACTOR shall notify the Utility Owner that it needs to obtain a Railroad encroachment permit. CONTRACTOR shall be responsible for all coordination necessary for the Utility Owner to obtain permits for Utility Adjustments within Railroad property.

VIII. RIGHT-OF-WAY

A. Definitions:

1. **Right of Way Services** means all acquisition services, including written appraisals and negotiation, as set forth in the SCDOT Acquisition Manual and all relocation assistance services as set forth in the SCDOT Relocation Assistance Manual (collectively the "Right of Way Services").
2. **CONTRACTOR-Designated Right of Way** means any interest (permanent or temporary) in real property located outside of the proposed Project right of way limits (new or existing), as depicted on the SCDOT Project Right of Way Plans for this Project, that is specifically identified by CONTRACTOR in an SCDOT approved Alternative Technical Concept (ATC). CONTRACTOR-Designated Right of Way does not apply to Railroad property.
3. **Just Compensation** means the SCDOT approved value, based on appraisals prepared by an appraiser from the Approved SCDOT Appraiser List of parcels acquired for the Project. In determining just compensation, only the value of the property to be acquired for or taken, any diminution in the value of the landowner's remaining property, and any benefits to be derived from the proposed Project including the value of any property or rights relinquished or reverting to the landowner as a part or result thereof shall be considered.
4. **Eligible Relocation Assistance Payments** means payments calculated in accordance with SCDOT Relocation Assistance Manual and approved by SCDOT.

5. **Premium Right of Way Acquisition Costs** means the amount of a negotiated settlement that exceeds just compensation set in the approved SCDOT appraisal or jury award.
6. **Additional Right of Way** means additional property identified after contract execution that is not identified on the SCDOT Project Right of Way Plans or as CONTRACTOR-Designated Right of Way, which CONTRACTOR determined is necessary for completing the design and construction of the Project, and which SCDOT has agreed to acquire. Additional Right of Way does not apply to Railroad Property.
7. **Additional Areas** means additional real property rights or interests, in each case that are not intended for use as part of the permanent or temporary right of way that is desired by CONTRACTOR for, but not limited to, construction staging, access, or borrow pits, or other similar uses.
8. **Hold-off Parcels** means those parcels on the Right of Way Plans where Right of Way Service have not been completed prior to award of the contract.

B. SCDOT Right-of-Way Service Responsibilities

1. SCDOT will perform Right of Way Services with respect to the following property:
 - a. All right of way parcels identified on SCDOT Project Right of Way Plans as set forth in Attachment B, (Right of Way Plans);
 - b. All CONTRACTOR-Designated Right of Way; and
 - c. All Additional Right of Way.
2. SCDOT will provide CONTRACTOR with SCDOT approved right-of-way certifications, for all parcels acquired for the design of the Project.
3. SCDOT will provide CONTRACTOR with a Right of Way Certification, included in Attachment B, which will identify Hold-off Parcels and provide a date the CONTRACTOR will have access to the parcel post award. SCDOT will update the Right of Way Certification at least twice a month to inform the CONTRACTOR of the status of Right of Way Services on Hold-off Parcels.

C. CONTRACTOR Responsibilities:

1. CONTRACTOR shall be responsible for the following:
 - a. Acquisition of any Additional Areas. Acquisition of any Additional Areas shall be the sole responsibility of Contractor, and any title or interest shall be secured in the name of the Contractor. Contractor shall provide SCDOT the location and documentation for these Additional Areas. Contractor shall furnish

SCDOT a copy of any agreements, whether for purchase or lease, for the use of additional properties in conjunction with the construction of the Project. Contractor shall abide by the provisions of all applicable environmental permits, any conditions of individual right of way agreements, and all environmental commitments. Any necessary permit modifications are the responsibility of the Contractor.

- b. Preparation and submission to SCDOT of the Right of Way Activity Plan. Within 45 days of execution of the contract, Contractor shall submit a Right of Way Activity Plan to the SCDOT's right of way project manager and it shall include the following:
 - i. Establish a clear zone adjacent to properties occupied by persons to be displaced in which construction equipment shall not be operated or parked,
 - ii. Establish a clear zone for construction for properties occupied by persons to be displaced to prevent undue impacts or hardships,
 - iii. Establish a method of protecting equipment and property from vandalism or unauthorized use,
 - iv. Provide reasonable and safe access to residences or businesses that are to be displaced until such time as the property is vacant, and
 - v. Observe the property rights of landowners of adjacent and/or yet to be acquired properties.
- c. Cooperate in all respects with SCDOT and cause all personnel to be available to and assist SCDOT in connection with any eminent domain proceedings, including testifying as an expert witness. After completion of the Project, CONTRACTOR shall continue to provide such cooperation and assistance of personnel as and when requested by SCDOT, For purposes of this section, "personnel" means any employee, subcontractor, subconsultant, or agent of the CONTRACTOR at any tier, as well as any expert witnesses, surveyors, land planners and other consultants utilized by CONTRACTOR in connection with the Project,
- d. All commitments in the Right of Way instruments and moving items included in Attachment B, and
- e. Any commitments in the Right of Way instruments secured after submittal of the cost proposal shall be performed under a Contract Change Request.

D. SCDOT Cost:

1. SCDOT shall be responsible for the following:

- a. Cost of Right of Way Service to secure the parcels identified on the SCDOT Right of Way Plans set forth Attachment B;
- b. Just Compensation, Eligible Relocation Assistance Payments, and Premium Right of Way Acquisition Costs, if any, to secure the parcels identified on the SCDOT Right of Way Plans set forth Attachment B;
- c. Cost of all commitments in the Right of Way instruments shown on SCDOT Right of Way Plans but secured after submittal of the cost proposal;
- d. 50% of Premium Right of Way Acquisition Cost for CONTRACTOR Designated Right of Way.

E. CONTRACTOR Cost:

1. CONTRACTOR shall be responsible for the following:

- a. Cost of CONTRACTOR-Designated Right of Way and Additional Right of Way which includes the following:
 - i. Right of Way Services performed by SCDOT;
 - ii. The cost of condemnation proceedings incurred by SCDOT including expert witness fees, and all fees and expenses for exhibits, transcripts, photos and other documents and materials production, other than attorneys' direct fees;
 - iii. Just Compensation;
 - iv. Premium Right of Way Acquisition Costs for Additional Right of Way;
 - v. 50% of Premium Right of Way Acquisition Cost for CONTRACTOR Designated Right of Way;
 - vi. Permitting and re-evaluation or modification of permits, if necessary;
 - vii. All governmental permits or approvals for the acquisition of additional areas; and
 - viii. Eligible Relocation Assistance Payments.
- b. Cost of Additional Areas;
- c. Cost of all commitments in the Right of Way instruments included in Attachment B; and
- d. Cost of all commitments in the Right of Way instruments for CONTRACTOR-Designated Right of Way and Additional Right of Way.

2. Cost associated with CONTRACTOR-Designated Right of Way and Additional Right of Way shall be agreed upon via a Contract Change Request and deducted from CONTRACTOR's Contract Price through a change order. Each request shall include an identification of the Additional Right of Way, right of way plan sheets and a justification for its need related to the Project.
3. In the event that the Additional Right of Way is from a parcel where SCDOT is actively negotiating a Hold-off Parcel, CONTRACTOR agrees to share in the cost of the acquisition and relocation assistance as follows:
 - a. CONTRACTOR shall be responsible for the cost of the updated appraisal and Just Compensation of that portion of the property attributable to the Additional Right of Way;
 - b. CONTRACTOR shall be responsible for the cost of any increase in Eligible Relocation Assistance Payment attributable to the Additional Right of Way;
 - c. CONTRACTOR shall be responsible for 50% of the combined cost of all Right of Way Services; and
 - d. CONTRACTOR shall be responsible for 50% of the combined Premium Right of Way Acquisition Costs.
 - e. CONTRACTOR shall be responsible for 100% of the Premium Right of Way Acquisition Costs for those parcels which may be identified on the Hold-off list, but the acquisition has been completed by SCDOT prior to the request for Additional Right of Way.

F. Access to Parcels:

1. CONTRACTOR shall not enter any parcel prior to CONTRACTOR's receipt of the SCDOT right of way certification for that parcel. Only in exceptional circumstances will a certification be approved by SCDOT based on a right of entry. Certification may be on a tract-by-tract basis.
2. If CONTRACTOR enters any property in connection with the Project without having obtained the SCDOT right of way certification, in addition to all other rights and remedies provided by law or equity or available under the Contract or otherwise, CONTRACTOR shall be responsible for (i) its costs and all costs incurred by SCDOT as a result thereof and (ii) any delay to Substantial Completion of the Project to the extent the CONTRACTOR's entry onto such property causes, results in, or contributes to a delay by SCDOT in acquiring said property or parcel, or any other property or parcel owned by the same owner.

G. Schedule, Delays:

1. SCDOT makes no guarantees or warranties when the delivery date will be for SCDOT to acquire and certify the CONTRACTOR-Designated Right of Way or Additional Right of Way. CONTRACTOR is responsible for allocating sufficient time and arranging its CPM schedule to avoid impacts caused by access to CONTRACTOR-Designated Right of Way and Additional Right of Way. CONTRACTOR shall not be entitled to schedule impacts, delays or extension of time to the Project caused by Right of Way Services in securing CONTRACTOR-Designated Right of Way or Additional Right of Way
2. CONTRACTOR shall not be entitled to schedule impacts, delays or extension of time to the Project caused by its acquisition of Additional Areas.
3. To the extent that SCDOT has not provided access to Project right of way or is unable to provide access to the Project right of way on or prior to the date set forth on the Right of Way Certification in Attachment B, SCDOT may notify CONTRACTOR of a revised projected date for delivery of access. Upon such notice or, in the absence of such notice, upon the failure to provide access on the date specified on the Right of Way Certification, CONTRACTOR shall: (i) take immediate action to minimize any cost and time impact and shall work around such parcel until access can be provided, including rescheduling and re-sequencing the work to minimize or avoid any delay to the Project; and (ii) provide SCDOT written notice, within fifteen calendar days after receipt of such notice from the SCDOT or upon SCDOT's failure to meet the date specified on the Right of Way Certification whether the lack of access will result in a delay to Substantial Completion of the Project.

IX. PERMITTING

The following conditional permit is being acquired and will be available in Attachment B under the Environmental Section in an Addendum:

USACE Section 404 Permit

Any Permit modifications, alterations, re-evaluations or changes will be the responsibility of the CONTRACTOR as further detailed in Article X and Exhibit 8. CONTRACTOR shall comply with all environmental permit requirements as set forth in Exhibit 8.

Utility relocation and other activities outside the right of way limits and/or outside of the identified impact area covered by SCDOT'S USACE Section 404 Permit will require separate USACE Section 404 permit.

Except for those permits acquired by SCDOT, CONTRACTOR shall obtain all permits necessary for completion of this project. This includes all permits associated with the wet utilities to be relocated by the CONTRACTOR. Utility Relocation and other activities outside the right of way limits will require separate USACE Section 404 permit. The CONTRACTOR shall maintain and comply with all permits obtained by SCDOT and CONTRACTOR necessary for completion of this project. The CONTRACTOR shall

comply with all local, state, and federal permitting requirements. Regarding any permit or license that must be obtained in the name of SCDOT, the CONTRACTOR shall perform all functions within its power to obtain the permit or license, and SCDOT shall cooperate in this effort and perform the functions that the permitting process dictates must be performed by SCDOT. The CONTRACTOR shall submit permit applications to SCDOT prior to submission to the permitting governmental authority. SCDOT will submit the permit application to the appropriate permitting agency indicating that CONTRACTOR is acting as an agent for SCDOT. If said regulatory agencies fail to issue permits in a timely manner, SCDOT may, on an individual basis, consider a time extension for permit approval delays when CONTRACTOR can demonstrate that the application was submitted in a timely manner, all reasonable efforts have been made to expedite the permit approval, and that the delay has a direct impact on the Critical Path. CONTRACTOR shall not be entitled to additional compensation for delays in permit approval.

SCDOT is responsible for compensatory mitigation up to but not exceeding the mitigation credits identified for CCR Phase 1 as set forth in the USACE Section 404 Individual Permit, specifically those set forth in the Impacts and Mitigation Spreadsheet. The total number of stream and wetland credits for CCR Phase 1 is set forth in the Impacts and Mitigation Spreadsheet included in the USACE Section 404 Individual Permit (IP) and separately listed under the Environmental Compliance section in Attachment B. The Impacts and Mitigation Spreadsheet shall be completed as detailed in Exhibit 8.

CONTRACTOR is responsible for compensatory mitigation associated with the wet utilities to be relocated by the CONTRACTOR. Compensatory mitigation for wetland/stream impacts beyond the right of way limits for wet utility relocation may be available through an approved mitigation bank or Permittee Responsible Mitigation (PRM) as define in EPA's 2008 Mitigation Rule. If the impacts associated with the wet utilities to be relocated by the CONTRACTOR do not exceed those impacts per each jurisdictional feature identified in the approved permit of CCR Phase 1, no additional mitigation will be required.

X. ENVIRONMENTAL COMPLIANCE

A. Compliance with Environmental Commitments

CONTRACTOR shall comply with all Environmental Documents and requirements, including but not limited to:

1. All NEPA environmental determinations and commitments set forth in the combined Final Environmental Impact Statement (FEIS) / Record of Decision (ROD), approved for the Carolina Crossroads Project by the Federal Highway Administration (FHWA) on May 2, 2019 and Re-evaluation approved August 3, 2020, included in Attachment B, any modification thereto, and requirements of Exhibit 8;

2. All stipulations and conditions under which SCDOT received approval of the Environmental Document(s) and any modifications resulting from a re-evaluation of the Document(s). If the CONTRACTOR elects to construct the Project in a manner that is not consistent with the assumptions in the SCDOT prepared environmental documents, the CONTRACTOR will be responsible for revising the environmental documents and provide any additional studies that may be required. All revisions will require SCDOT and FHWA, if applicable, approval prior to any right of way acquisition or construction activity;
 3. All applicable laws and regulations relating to potential or actual hazardous materials that may be encountered in the course of carrying out this Agreement;
 4. All necessary social, economic, and environmental studies required by regulatory authorities in the course of construction;
 5. All cost, preparation, revision, acquisition, compliance, and adherence to conditions of any permits required by federal, state, or local laws or regulations; and
 6. The resolution of any deviations from the contract documents, drawings or other information included in the environmental permits. Any proposed changes within the permitted areas would need to be coordinated with SCDOT's Environmental Services Office (ESO).
- B. Preconstruction / Partnering Conference(s)

CONTRACTOR shall conduct one (or more, if appropriate) pre-construction / partnering conference(s) prior to any construction activity to discuss environmental, permitting and sustainability issues, which conference shall include all subcontractors, and, to the extent feasible, representatives from the U.S. Army Corps of Engineers, the S.C. Department of Health and Environmental Control Water Quality Division, the FHWA, CONTRACTOR, and SCDOT.

C. Protection of Archeological and Paleontological Remains and Materials

1. When archeological or paleontological remains are uncovered, CONTRACTOR shall immediately halt operations in the area of the discovery and notify SCDOT.
2. Archeological remains consist of any materials made or altered by man which remains from past historic or prehistoric times (i.e. older than 50 years) Examples include old pottery fragments, metal, wood, arrowheads, stone implements or tools, human burials, historic docks, structures or not recent (i.e. older than 100 years) vessel ruins. Paleontological remains consist of animal remains, original or fossilized, such as teeth, tusks, bone, or entire skeletons.
3. SCDOT will have the authority to suspend the work for the purpose of preserving, documenting, and recovering the remains and materials of archeological and

paleontological importance for the State. CONTRACTOR shall carry out all instructions of SCDOT for the protection of archeological or paleontological remains, including steps to protect the site from vandalism and unauthorized investigations, from accidental damage and from dangers such as heavy rainfall or runoff.

4. CONTRACTOR's Contract Time and or Contract Price shall be adjusted to the extent CONTRACTOR's cost and/or time of performance have been adversely impacted by the presence of archeological or paleontological remains.

D. Community and Public Relations Support Plan

The CONTRACTOR shall provide to SCDOT for review and written approval a Community and Public Relations Support Plan as part of the Project in accordance with Exhibit 5. The Community and Public Relations Support Plan shall identify the process by which the CONTRACTOR shall (1) provide SCDOT with relevant and timely construction-related information for public distribution and (2) assist SCDOT with promoting public awareness of the Project's benefits and impacts. All costs associated with Community and Public Relations Support Plan shall be the responsibility of CONTRACTOR and be included in the Contract Price.

E. Sustainability Certification and Verification

CONTRACTOR shall be responsible for sustainable practices and techniques as part of the construction of this Project through the Envision v3 and INVEST program set forth in Exhibit 8. Applicable Envision v3 credits have been identified based on the preferred alignment design set forth in the combined Final Environmental Impact Statement (FEIS) / Record of Decision (ROD) approved for the Carolina Crossroads Project by the Federal Highway Administration (FHWA) on May 2, 2019, which is included in Attachment B. The applicable Envision v3 credits are listed in the Sustainability Action Plan included in Attachment B. CONTRACTOR shall obtain the credits and associated levels of achievement for those credits by the deadlines set forth in the Final Sustainability Action Plan and as required in Exhibit 8. All costs associated with obtaining, implementing and documenting Envision v3 credit requirements and INVEST documentation and application assistance shall be the responsibility of the CONTRACTOR.

XI. HAZARDOUS MATERIALS

A. Identified Hazardous Materials

1. The CONTRACTOR is referred, in addition to this Article, to Exhibit 8 and Attachment B for information and requirements regarding Hazardous Materials inspections and other environmental documentation regarding Hazardous Materials. The CONTRACTOR shall be responsible for handling, storage, remediation, and disposal of any elements, compounds, materials, wastes, substances and chemicals deemed to be a solid waste or hazardous waste under

applicable state or federal law, (hereinafter "Hazardous Materials") encountered at the Site which were identified in the Hazardous Materials inspections or other environmental documentation regarding Hazardous Materials provided in Exhibit 4, Project Design Criteria and Attachment B and the cost of these activities shall be included in the Contract Price.

2. If the CONTRACTOR's plan includes demolition, removal, or disposal of existing structures not previously inspected by SCDOT, the Contractor is required to perform lead-based paint and asbestos inspections on the existing structures prior to performing those activities. The cost of the lead-based paint and asbestos inspections shall be included in the Contract Price. Removal of lead-based paint and asbestos and lead-based paint and asbestos containing materials identified by inspections shall be by a qualified independent firm retained by the Department or by negotiating a Contract Change Request with the CONTRACTOR as outlined in the procedures in Article XI.F.
 3. If the CONTRACTOR's plan includes demolition, removal, or disposal of existing structures previously surveyed by SCDOT, but the asbestos inspection reports have expired, the CONTRACTOR is required to perform new asbestos inspections on the existing structures prior to performing those activities. The cost of the asbestos inspections shall be included in the Contract Price. The cost of removal, handling, storage, remediation, and disposal of asbestos containing materials identified in the expired inspection reports shall be included in the Contract Price.
 4. A copy of the lead-based paint and asbestos inspection reports and the notification of demolition or renovation forms must be submitted to SCDHEC at least ten (10) working days prior to demolition of an existing structure. Prior to submitting the reports and forms to SCDHEC, the CONTRACTOR shall obtain the RCE's signature. The CONTRACTOR is responsible for obtaining all required permits to proceed with the work.
 5. The CONTRACTOR is responsible for all necessary containment, removal, transportation, and disposal of the subsurface and surface Hazardous Materials identified in inspections or other environmental documentation provided in Attachment B in compliance with all applicable Federal (EPA, OSHA & DOT) and State (SCDHEC & SCDOT) and local (County and Municipality) requirements for Hazardous Materials and worker health and safety. The CONTRACTOR is responsible for obtaining all required permits to proceed with the work.
- B. Unexpected Hazardous Materials – Except for Hazardous Materials excavated, hauled, and disposed of on Railroad property/right of way, upon encountering any unexpected Hazardous Materials, the CONTRACTOR shall follow the procedures as described below:

1. CONTRACTOR shall stop Work immediately in the affected area and notify SCDOT and, if required by state or federal law, all government or quasi-government entities with jurisdiction over the Project or site.
2. Upon receiving notice of the presence of Hazardous Materials, SCDOT will take necessary measures required to verify that the Hazardous Materials are remediated or rendered harmless. Such necessary measures will include SCDOT either (i) retaining qualified independent firm or (ii) negotiating a Contract Change Request with CONTRACTOR.
3. CONTRACTOR shall resume Work at the affected area of the Project only after written notice from SCDOT that the (i) Hazardous Materials have been removed or rendered harmless and (ii) all necessary approvals have been obtained from all government and quasi-government entities having jurisdiction over the Project.
4. CONTRACTOR's Contract Price and/or Contract Time shall be adjusted to the extent CONTRACTOR's cost and/or time of performance has been adversely impacted by the presence of Hazardous Materials.
5. If a Contract Change Request is negotiated, the CONTRACTOR shall comply with Article XI.E.

C. General Requirements:

1. For purposes of this Project, the Hazardous Material Generator shall be listed as "SCDOT" of any and all Hazardous Materials and/or hazardous wastes associated with work on the Project, with the exception that CONTRACTOR shall be the generator for all Hazardous Materials it, its consultants, subconsultants, subcontractors or suppliers, brings on to the Project or that is brought to the Project by any of them and subsequently is released or caused to be released by the CONTRACTOR, CONTRACTOR's consultants, subcontractors and suppliers. The foregoing shall not preclude or limit any rights or remedies that SCDOT may have against third parties and/or prior owners, lessees, licensees and occupants of the Project's right of way.
2. SCDOT is not responsible for Hazardous Materials actually brought to the Project by CONTRACTOR, CONTRACTOR's consultants, subcontractors and suppliers or anyone for whose acts they may be or are liable. SCDOT is not responsible for negligent or willful acts by CONTRACTOR, CONTRACTOR's consultants, subcontractors and suppliers or anyone for whose acts they may be or are liable relating to Hazardous Materials found at the site. CONTRACTOR shall indemnify, defend and hold harmless SCDOT and SCDOT's officers, directors, employees and agents from and against all claims, losses, damages, liabilities and expenses, including attorney's fees and expenses arising out of, relating to, or resulting from those Hazardous Materials actually brought to the Project, released, or negligent or willful acts relating to Hazardous Materials, or any of the foregoing by

CONTRACTOR, CONTRACTOR's consultants, subcontractors and suppliers or anyone for whose acts they may be or are liable.

3. CONTRACTOR shall be responsible for the performance of and all costs associated with excavation, hauling, and disposing of unexpected Hazardous Materials from Railroad property/right of way in compliance with the Railroad Public Project Manual and Railroad Agreement as set forth in Article VII and Exhibit 6.

XII. DEMOLITION, REMOVAL & DISPOSAL OF STRUCTURES

CONTRACTOR shall be responsible for the demolition, removal and disposal of all structures and their appurtenances within SCDOT Right of Way, to include those portions that may extend outside the right of way, but were purchased as a part of the acquisition process for the Project. Structures shall include the bridges identified in the scope of work and all buildings acquired for the Project. All necessary permitting shall comply with Articles II.B.4 and IX of the Contract. Handling and disposal of Hazardous Materials shall be in accordance with Article XI of the Contract. Before demolition of the structures, the CONTRACTOR shall complete and submit a Notification of Demolition and Renovation form to the South Carolina Department of Health and Environmental Control.

XIII. DIFFERING SITE CONDITIONS

A. Differing Site Conditions, Defined; Burden of Proof

1. "Differing Site Conditions" are concealed or latent physical conditions encountered at the Project site during the term of the Agreement that (i) materially differ from the conditions reasonably assumed to exist at the site (Type 1); or (ii) are of an unusual nature, differing materially from the conditions ordinarily encountered and generally recognized as inherent in the work provided for in the Agreement (Type 2). Type 1 conditions are those geotechnical or geological deviations from what is normally assumed to exist based on information provided in the RFP and actual site location. The only Type 2 conditions eligible for relief under this Article XIII are:
 - a. The discovery at the site of any archaeological, paleontological, biological or cultural resource; provided that the existence of such resource was not disclosed in the RFP; and
 - b. The discovery at the site of any species listed as threatened or endangered under the federal or State Endangered Species Act, except for those species disclosed as threatened or endangered in the RFP; and
 - c. The discovery at the site of any manmade object or manmade condition not normally found in subsurface material; and
 - d. The discovery at, near or on the site of any unexpected artesian condition.

2. The definition of Differing Site Condition excludes unanticipated utilities and unexpected Hazardous Waste.
3. CONTRACTOR shall bear the burden of proving that a Differing Site Condition exists and that CONTRACTOR could not have reasonably (i) designed the Project or (ii) worked around the condition, including by resequencing, relocating, or redeploying its forces to other portions of the Project or other activities unrelated to its work, so as to avoid additional cost. CONTRACTOR shall have no right to claim that any condition constitutes a Differing Site Condition if (A) CONTRACTOR, or any person or entity for which CONTRACTOR is legally responsible, had actual knowledge regarding such conditions prior to submission of the Cost Proposal, or (B) such condition would have become known to CONTRACTOR based upon a Reasonable Investigation prior to the submission of the Cost Proposal, as defined below. Furthermore, CONTRACTOR hereby acknowledges and agrees that, based upon the opportunity to review all available information, seek reasonable additional information, visit the Project site prior to submission of the Cost Proposal, and make any additional subsurface explorations or soil tests that CONTRACTOR determined to have been useful, in each case, prior to the submission of the Cost Proposal, it has assumed all risks with respect to the need to work around locations impacted by Differing Site Conditions.

B. Responsibility

1. Type 1: SCDOT is responsible for only Type 1 Differing Site Conditions that exist throughout a specified area around each SCDOT-provided test hole, as listed in the geotechnical data in Attachment B. For purposes of the Type 1 portion of the definition of Differing Site conditions, “reasonably assumed to exist” means that the geotechnical and geological conditions indicated with respect to each SCDOT test hole exist throughout an area represented by a five- foot radius drawn from the center of the test hole.
2. Type 2: SCDOT is responsible for only Type 2 Differing Site Conditions listed above.
3. CONTRACTOR shall assume responsibility for all other Differing Site Conditions not identified as Type 1 or Type 2.

C. Relief for Certain Differing Site Conditions

1. CONTRACTOR shall submit a Contract Change Request to seek any relief for Differing Site Conditions for which SCDOT has responsibility. So long as CONTRACTOR has met its burden of proof that a condition is a Differing Site Condition for which CONTRACTOR is entitled to certain relief. CONTRACTOR shall be entitled to a change order that provides for:
 - a. additional time, to achieve Substantial Completion for a Differing Site Condition that causes or will result in an identifiable and measurable disruption

to the critical path under the then-current CPM Schedule, after consumption of all then-available float; provided, however, that SCDOT may, in its sole discretion, elect to order acceleration, in which case the change order shall not provide for an adjustment to the then-current CPM Schedule as a result of such Differing Site Condition;

- b. actual, direct, and documented costs incurred solely and directly attributable to the Differing Site Condition;
 - c. acceleration costs, only if SCDOT elects to order acceleration.
2. CONTRACTOR's entitlement to a change order is subject to the following additional limitations:
- a. CONTRACTOR shall not be entitled to any disruption damages in connection with any additional costs claimed with respect to any Differing Site Condition;
 - b. CONTRACTOR shall not be entitled to any punitive, indirect, special, incidental, or consequential damages in connection with any additional costs claimed with respect to any Differing Site Condition;
 - c. costs shall not exceed those allowed in, and calculated pursuant to Section 105.16.5 of the SCDOT Standard Specifications, with the exception of extended job site overhead rates which shall be as set forth in Exhibit 5 of the RFP;
 - d. CONTRACTOR shall not be entitled to an extension of time or additional costs if the delay attributable to the Differing Site Condition is concurrent with any other unrelated delay (Concurrent Delay as defined in Article VII) to an activity on the critical path under the then-current CPM Schedule for which CONTRACTOR is responsible under this Agreement.
 - e. If SCDOT directs acceleration of the Work, as part of CONTRACTOR's Contract Change Request, CONTRACTOR shall show all acceleration costs associated with meeting the original scheduled date for Substantial Completion.

D. Differing Site Condition Procedure

1. If CONTRACTOR encounters known or suspected Differing Site Conditions, CONTRACTOR shall promptly notify SCDOT by either submitting a formal notice to SCDOT (for those conditions that CONTRACTOR anticipates are CONTRACTOR's responsibility) or submitting a Contract Change Request before (for those conditions that CONTRACTOR anticipates are SCDOT's responsibility), in either case without substantially disturbing or altering the affected area. If CONTRACTOR is entitled to relief, then CONTRACTOR shall not resume work that affects or reasonably could affect the condition until a change order is executed or a Force Account order is issued for the affected work. If

CONTRACTOR is not entitled to relief, or if CONTRACTOR elects not to pursue relief to which it may otherwise be entitled, then CONTRACTOR shall not resume work that affects or reasonably could affect the condition until SCDOT consents to work resuming, subject to applicable law and governmental approvals.

2. Each Contract Change Request relating to a Differing Site Condition shall be accompanied by:
 - a. a statement signed by a qualified professional setting forth (i) all relevant assumptions made by CONTRACTOR with respect to the condition at the relevant portion of the Site, (ii) justifying as reasonable the basis for all such assumptions which includes supporting documentation, (iii) explaining exactly how the condition encountered qualifies as a Differing Site Condition and (iv) listing the specific work-arounds the CONTRACTOR undertook, to mitigate any cost and delay effects of the encounter with the condition, and
 - b. a signed statement certifying that CONTRACTOR, and any person or entity for which CONTRACTOR is legally responsible (i) had no actual knowledge regarding such condition as of the submission of the Cost Proposal and (ii) such condition would not have become known to CONTRACTOR based upon a Reasonable Investigation.
3. If the request is based on Type 1 Differing Site Conditions, the Contract Change Request shall also include detailed information regarding the alleged error in the boring data provided by owner or performed by CONTRACTOR forming the basis for the request, and shall explain how CONTRACTOR's assumptions would have changed had the boring data been accurate.
4. Upon submittal of a Contract Change Request or other notice as set forth above, SCDOT will investigate the conditions within three business days and if it is determined that (1) a Differing Site Condition exists, (2) the condition is SCDOT's responsibility, and (3) the condition causes an increase in the cost or time required for performance of the work, the Contract will be adjusted consistent with the relief provided above.
5. SCDOT shall have the right to require the CONTRACTOR to resume work in the area at any time, even though an investigation may still be ongoing. CONTRACTOR shall promptly resume work in the area upon receipt of notification from SCDOT to do so.

E. Reasonable Investigation

“Reasonable Investigation” means the following activities by appropriate, qualified professionals prior to the submission of the Cost Proposal:

1. Visit and visual, non-intrusive inspection of the site and adjacent locations, except areas to which access rights have not been made available prior to the submission of the Cost Proposal;
2. Review and analysis of all reference documents;
3. Review and analysis of SCDOT-provided governmental approvals or permits, if any, available prior to the submission of the Cost Proposal;
4. Reasonable inquiry with real property, particularly those properties indicating former gas stations/auto garages, and utility owners or occupants, including request for and review of plans provided thereby, if any;
5. Review and analysis of laws, regulations, rules, ordinances, etc. applicable to the Project prior to the submission of the Cost Proposal; and
6. Other activities sufficient to familiarize CONTRACTOR with surface and subsurface conditions, including the presence of utilities, hazardous materials, archeological, paleontological and cultural resources, and threatened or endangered species, affecting the site or surrounding locations.

XIV. FORCE MAJEURE

Delays or failures of performance, in each case, that materially and adversely affect performance of the CONTRACTOR hereunder, shall not constitute breach of the Agreement if and to the extent such delays or failures of performance result in a delay to the critical path identified in the current accepted CPM Schedule that are caused by:

- A. acts of God or the public enemy;
- B. expropriation or confiscation of facilities;
- C. compliance with any order or request of any governmental authority other than SCDOT or a party in privity with it;
- D. a change in law after the CONTRACTOR'S submission in response to the RFP that directly and substantially affects performance of the Project;
- E. acts of war (including civil and revolutionary); invasion, armed conflict, violent act of foreign enemy, military or armed blockade, military or armed takeover of the Project or the Site;
- F. rebellion, terrorism, riot, insurrection, civil commotion or sabotage that causes direct physical damage to, or otherwise directly causes interruption to construction or direct losses during maintenance of the Project;

- G. fires, floods, earthquakes, including all foreshocks and aftershocks, where such earthquakes include ground shaking, liquefaction, settlement, or ground movements that directly impact, and cause damage to, temporary or permanent works of the Project; landslides caused by natural events, tornados, hurricanes, tropical storms, sinkholes caused by natural events, in each case directly impacting the physical improvements of the Project or CONTRACTOR'S performance of the scope of the work;
- H. explosions, nuclear explosion, including radioactive contamination that triggers CONTRACTOR'S obligations pertaining to hazardous materials hereunder and, in each case directly impacting the physical improvements of the Project or performance of the CONTRACTOR'S scope of work,
- I. national or regional unavailability or shortage of materials;
- J. embargos directly affecting materials required to perform the CONTRACTOR'S scope of the work;
- K. quarantine or suspension by the Governor, President, or other regional authority, or declared epidemic or pandemic, in each case, directly affecting the CONTRACTOR'S performance of the scope of the work;
- L. declared state of emergency by the Governor, the U.S. President or regional authority having jurisdiction over the Project or the CONTRACTOR'S performance of the scope of the work;
- M. strikes (both national or regional strikes) or other concerted acts of workman not arising out of or relating to CONTRACTOR or any person or entity for which CONTRACTOR is responsible;
- N. vehicle, as defined by 56-1-10 of South Carolina Code of Laws, collision that occurs prior to Final Completion, the impact of which causes damage to full pavement structure, bridge structure, noise wall, barrier wall/retaining wall or overhead sign structure of the Project;

(each of the foregoing a "Force Majeure Event"), except, in each case, to the extent that any of the foregoing events or consequences of such events (i) arose out of (A) any breach of contract by CONTRACTOR or any person or entity for whom CONTRACTOR is legally responsible, (B) any act or omission by CONTRACTOR or any such person or entity, (C) any negligence, recklessness, willful misconduct, fraud, or violation of laws by CONTRACTOR or any such person or entity; or (ii) could reasonably have been avoided by CONTRACTOR or any such person or entity (by the exercise of caution, due diligence or reasonable efforts, or otherwise). Any expense attributable to such occurrence of a Force Majeure Event shall not entitle CONTRACTOR to an adjustment in the Contract Price, as these events shall be covered under the CONTRACTOR'S appropriate insurance policy. The duration of

delay to the critical path identified in the current accepted CPM Schedule directly caused by a Force Majeure Event shall be added to the Contract Time.

CONTRACTOR shall bear the burden of proving that a Force Majeure Event exists and that CONTRACTOR could not have reasonably worked around the condition, including by resequencing, relocating, or redeploying its forces to other portions of the Project or other activities unrelated to its work, so as to avoid additional delay or cost.

XV. WARRANTY

- A. CONTRACTOR warrants that it will perform all services in accordance with the standards of care and diligence normally practiced by recognized engineering and construction firms in performing services and obligations of a similar nature. CONTRACTOR warrants that all materials and equipment furnished shall be of good quality and new unless otherwise authorized by SCDOT and that the construction shall conform to the Contract requirements. CONTRACTOR agrees to promptly correct, at its own expense, defects or deficiencies in materials and workmanship that appear prior to and during a period of three years after Final Completion of the Project. This shall include all plant-produced materials (i.e. asphalt, concrete, etc.) and in-contract wet utility relocation. CONTRACTOR shall not be responsible for damages caused by SCDOT's failure to provide timely notification of potentially damaged or defective work of which SCDOT had actual knowledge. CONTRACTOR shall properly perform, at the written request of SCDOT made at any time within the warranty period after Final Completion of the Project as defined in Article IV.A.5, all steps necessary to satisfy the foregoing warranty and correct any element of the Project or the services that is defective or does not reflect such standards of care and diligence. The cost of such corrective services shall be CONTRACTOR's responsibility.
- B. CONTRACTOR further warrants the performance of all bridge components on all structures for three years from Final Completion of the Project. If a component fails to perform properly for any reason, including but not limited to normal wear and tear, the CONTRACTOR shall replace the failed component at no cost to SCDOT.
- C. The warranty periods begin at Final Completion of the Project. CONTRACTOR shall immediately abate any warranty deficiency that poses an unsafe condition to the public; otherwise deficiencies shall be corrected no later than 30 days from the determination of corrective action. In the event CONTRACTOR, after notice, fails to immediately abate the deficiency or fails to make correction within the prescribed 30 days, SCDOT may have the deficiency corrected. All costs associated with such correction by SCDOT shall be the responsibility of the CONTRACTOR and his Surety. With respect to any component that is repaired or replaced pursuant to this warranty, the warranty period of that component shall be the longer of one year from repair or replacement of the component or the remainder of the original warranty period.

- D. CONTRACTOR shall take all steps necessary to transfer to SCDOT any manufacturer's or other third-party's warranties of any materials or other services used in the construction of the Project.
- E. These warranties are in addition to all warranties implied by law.
- F. In addition to the warranties outlined above, the CONTRACTOR agrees to promptly correct, at its own expense, defects or deficiencies in materials and workmanship that appear prior to and during a period of three years after Substantial Completion of the in-contract wet utility relocation. The warranty period for in-contract wet utility relocation begins at Substantial Completion as outlined in Exhibit 7.

XVI. INDEMNITY

- A. CONTRACTOR shall indemnify, defend and hold SCDOT harmless from any and all claims, liabilities and causes of action for any fines or penalties imposed on SCDOT by any state or federal agency because of violation by CONTRACTOR or any of its subcontractors of any state or federal law or regulation.
- B. CONTRACTOR shall indemnify, defend and hold SCDOT harmless from any and all claims, liabilities and causes of action arising out of or resulting from, in whole or in part, the performance of the Work, negligence or recklessness of CONTRACTOR or its agents, consultants and/or subcontractors.

XVII. DEFAULT; SUSPENSION; TERMINATION

- A. CONTRACTOR Events of Default (Contractor Default).
 - 1. CONTRACTOR shall be in default of this Agreement if:
 - a. CONTRACTOR fails to begin performance of the scope of the work promptly following issuance of the Notice to Proceed;
 - b. CONTRACTOR fails to perform the scope of the work in accordance with (i) the documents described in Article I (contract documents), (ii) the final, and as applicable, as-approved deliverables under Article II.J, (iii) applicable standards set forth therein;
 - c. CONTRACTOR refuses to remove, replace, and correct rejected materials, or nonconforming or unacceptable work;
 - d. CONTRACTOR (i) suspends, ceases, or stops performance of the scope of the work, or (ii) fails to perform the scope of the work continuously and diligently to completion, in either case (A) where CONTRACTOR fails to resume performance or to prosecute the work, as determined in SCDOT's reasonable discretion) as is identified in Preliminary Notice of Delinquency and thereafter in any Notice of Delinquency (as each such term is defined in Section 108 of

the Standard Specification), within 15 days after dispatch of such Notice of Delinquency, and (B) excluding work stoppages directed by SCDOT, approved by SCDOT, or for other reasons expressly permitted under this Agreement;

- e. CONTRACTOR abandons all or a material part of the Project, which abandonment is deemed to occur if (i) CONTRACTOR demonstrates through statements, acts, or omissions an intent not to continue, for any reason other than for a reasons expressly permitted under this Agreement, or (ii) no satisfactory progress in the work is performed for a continuous period of more than 15 days unless due to CONTRACTOR's compliance with work stoppages directed by SCDOT or for reasons expressly permitted under this Agreement;
- f. CONTRACTOR fails to resume performance of the scope of the work that has been suspended or stopped within five calendar days after (i) cessation of the event preventing performance (and for which CONTRACTOR is expressly permitted to have suspended or stopped performance under this Agreement) or (ii) receipt of notice from SCDOT to resume performance;
- g. Insolvency, Bankruptcy Events:
 - i. CONTRACTOR commences a voluntary case seeking liquidation, reorganization or other relief with respect to CONTRACTOR or CONTRACTOR's debts under any U.S. or foreign bankruptcy, insolvency or other similar law; seeking the appointment of a trustee, receiver, liquidator, custodian or other similar official of its, or any substantial part of its, assets; becomes insolvent, or generally does not pay its debts as they become due; provides notice of its inability to pay its debts; makes an assignment for the benefit of creditors; or takes any action to authorize any of the foregoing;
 - ii. An involuntary case is commenced against CONTRACTOR seeking liquidation, reorganization, dissolution, winding up, a composition or arrangement with creditors, a readjustment of debts or other relief with respect to such CONTRACTOR or CONTRACTOR's debts under any U.S. or foreign bankruptcy, insolvency or other similar law; seeking the appointment of a trustee, receiver, liquidator, custodian or other similar official of it or any substantial part of its assets; seeking the issuance of a writ of attachment, execution, or similar process; or seeking like relief, and such involuntary case shall not be contested by it in good faith or shall remain undismissed and unstayed for a period of 60 days;
 - iii. In any voluntary or involuntary case seeking liquidation, reorganization or other relief with respect to CONTRACTOR or its debts under any U.S. or foreign bankruptcy, insolvency or other similar law, this Agreement or any of the other Contract Documents, is rejected, including a rejection under 11 U.S.C. Section 365 or any successor statute; or

- iv. Any voluntary or involuntary case or other act or event described in clause (g)(i) or (g)(ii) shall occur (and in the case of an involuntary case shall not be contested in good faith or shall remain undismissed and unstayed for a period of 60 days) with respect to (i) any equity member, partner or joint venture member of CONTRACTOR, or (ii) any equity member, partner or joint venture member of CONTRACTOR for whom transfer of ownership or management authority would constitute an impermissible assignment hereunder;
- h. Allows any final judgment to remain unsatisfied for a period that, in SCDOT's sole judgment, poses a material adverse effect on CONTRACTOR's ability to perform the scope of the Work and, in particular, to pay for its obligations to SCDOT, subcontractors, and suppliers in connection therewith;
- i. CONTRACTOR makes, attempts to make, or suffers a voluntary or involuntary assignment or transfer of all or any portion of this Agreement or its interest in the Project;
- j. CONTRACTOR materially fails to observe or to perform, or to cause to be observed or performed, timely any other material covenant, agreement, obligation, term, or condition required to be observed or performed by CONTRACTOR under the Agreement including but not limited to:
 - i. Fails to supply a sufficient number of properly skilled workmen, tools, materials and equipment to assure the prompt completion of the work; or
 - ii. Failure to comply with applicable permits, law, or use of the Project violates such permits, law, or this Agreement;
- k. Any representation or warranty in the Agreement, the SOQs and Proposal (which representations and warranties of CONTRACTOR are incorporated into the Proposal explicitly or by reference), or the Proposal is false in any material respect, materially misleading, or inaccurate in any material respect when made (except as relates to continuing representations and warranties), or omits material information when made (except as relates to continuing representations and warranties);
- l. Any certificate, schedule, report, instrument, or other document delivered by or on behalf of CONTRACTOR to SCDOT under the Agreement is false or incorrect in any material respect, materially misleading, or inaccurate in any material respect when made (except as relates to continuing representations and warranties in any such certificates, schedules, reports, instruments, or other documents), or omits material information when made (except as relates to such continuing representations and warranties);
- m. CONTRACTOR (i) fails to make any payment owing to SCDOT under the Agreement in full and when due (including specifically payment of any

- liquidated or stipulated damages hereunder); or (ii) fails to make, absent a bona fide and valid dispute, payment in full and when due for labor, equipment, or materials in accordance with applicable law and with its agreements with consultants, subcontractors, subconsultants, vendors, or suppliers;
- n. CONTRACTOR fails (i) to obtain, provide, and maintain any insurance, surety bonds, guarantees, letters of credit, or other payment or performance security as is required under the Agreement for the benefit of the relevant parties, or (ii) to comply with any requirement of the Agreement pertaining to the amount, terms, or coverage of the insurance or security, or (iii) to pay the associated premiums, deductibles, self-insured retentions, co-insurance, or any such other amounts with respect to the insurance or security as and when due;
 - o. Unless continued performance of this Agreement is permitted under the terms of a debarment agreement with the State of South Carolina or otherwise as permitted under clause 2.e. below, and after any rights of appeal have been exhausted, if CONTRACTOR, any equity or joint venture member of CONTRACTOR, any consultant, subcontractor, subconsultant, vendor, or supplier, or any person or entity for which CONTRACTOR is legally responsible (i) is determined to be disqualified, suspended, or debarred, or otherwise is excluded from bidding, proposing, or contracting with a federal or state department or agency, or (ii) has not dismissed any consultant, subcontractor, subconsultant, vendor, or supplier whose work is not substantially complete and who is determined to be disqualified, suspended, debarred, or otherwise excluded from bidding, proposing, or contracting with a federal or state department or agency;
 - p. CONTRACTOR fails to comply with any order by SCDOT issued under, and pursuant to a contractual right in, this Agreement, including specifically orders to suspend CONTRACTOR's performance of the scope of work, in whole or in part, within the time allowed in such order; or
 - q. CONTRACTOR fails to achieve Substantial Completion or Final Completion by the Long Stop Date pursuant to Article IV.
2. Cure Periods. The following list identifies CONTRACTOR's rights to receive notice and opportunity to cure before SCDOT may exercise its remedies under clause 3 below, and this list also identifies other Contractor Defaults that are not subject to cure:
- a. Except as otherwise specifically set forth in this clause 2, CONTRACTOR and the surety providing the bond(s) pursuant to Article VI.B shall be entitled to 15 days prior written notice and opportunity to cure any Contractor Defaults before SCDOT may exercise any remedies hereunder, including specifically those under clause 3 below.

- b. CONTRACTOR and the surety providing the bond(s) pursuant to Article VI.B shall be entitled to seven days prior written notice and opportunity to cure the Contractor Defaults under clauses XVII.A.1.h., m., and n. before SCDOT may exercise any remedies hereunder, including specifically those under clause 3 below.
- c. Except with respect to those Contractor Defaults listed in clauses d. and e. below, if Contractor Defaults under clauses XVII.A.1.a., f., m., and n. are capable of cure (as determined by SCDOT in its sole discretion) but, by its nature, cannot be cured within such seven or 15 day period, as applicable, (also as determined by SCDOT in its sole discretion), then CONTRACTOR shall commence to cure such Contractor Default within such seven or 15 day period, as applicable, and thereafter diligently prosecute such cure to completion within 60 days or such other later time as determined by SCDOT, in its sole discretion, before SCDOT may exercise any remedies hereunder, including specifically those under clause 3 below.
- d. Except with respect to those Contractor Defaults listed in clause c. above and clause e. below, if a Contractor Default under clause XVII.A.1.e. cannot be cured within 15 days (as determined by SCDOT in its sole discretion), then CONTRACTOR shall commence to cure such Contractor Default within such 15 day period, and thereafter diligently prosecute such cure to completion within 30 days or such other later time as determined by SCDOT, in its sole discretion, before SCDOT may exercise any remedies hereunder, including specifically those under clause 3 below.
- e. CONTRACTOR hereby acknowledges and agrees that no notice and no opportunity to cure is required with respect to the Contractor Defaults under clauses XVII.A.1.g., i., k., l., o.(ii), p. and q., and SCDOT has the right to exercise its remedies hereunder immediately, including specifically those under clause 3 below.
- f. With respect to the Contractor Default under clause XVII.A.1.o., CONTRACTOR shall take appropriate steps to obtain, or to require its equity or joint venture member of CONTRACTOR, any consultant, subcontractor, subconsultant, vendor, or supplier, or any person or entity for which CONTRACTOR is legally responsible to obtain, a debarment agreement with the State of South Carolina in connection with any pending action for disqualification, suspension or debarment or any pending agreement for voluntary exclusion from bidding, proposing or contracting. If a debarment agreement is obtained that permits continued performance under this Agreement, then the disqualification, suspension, debarment or agreement for exclusion shall not be considered a Contractor Default. If, however, such a debarment agreement is not obtained, the CONTRACTOR shall have the following cure rights:

- i. With respect to a Contractor Default under clause XVII.A.1.o(i) involving CONTRACTOR, CONTRACTOR shall have 60 days after the effective date of the disqualification, suspension, debarment or agreement for exclusion to (i) obtain a debarment agreement allowing continued performance or (ii) otherwise cure the Contractor Default;
- ii. With respect to a Contractor Default clause XVII.A.1.o(i) involving any equity or joint venture member of CONTRACTOR involving any equity or joint venture member of CONTRACTOR, CONTRACTOR shall have 60 days after the effective date of the disqualification, suspension, debarment or agreement for exclusion (i) to remove the affected equity or joint venture member and obtain SCDOT's approval of the change in the ownership structure of CONTRACTOR, (ii) to obtain a debarment agreement allowing continued performance or (iii) otherwise cure the Contractor Default; and
- iii. With respect to a Contractor Default under clause XVII.A.1.o(i) involving a consultant, subcontractor, subconsultant, vendor, or supplier, or any other person or entity for which CONTRACTOR is legally responsible, CONTRACTOR shall have 60 days after the effective date of the disqualification, suspension, debarment or agreement for exclusion to obtain a debarment agreement allowing continued performance or otherwise cure the Contractor Default.

3. Remedies.

a. General Provisions.

- i. Failure to provide notice to CONTRACTOR's surety providing the bond(s) pursuant to Article VI.B shall not preclude SCDOT from exercising its remedies under this clause 3.
- ii. SCDOT shall also be entitled to exercise any other rights and remedies available under this Agreement, or available at law.
- iii. SCDOT's rights under this Agreement shall be cumulative and shall be in addition to every other right provided under this Agreement or at law, and the exercise or beginning of the exercise by SCDOT of any one or more of any of such rights or remedies shall not preclude the simultaneous or later exercise by SCDOT of any or all other such rights or remedies.
- iv. Except as expressly stated otherwise in this Agreement, SCDOT's exercise of any right or remedy does not waive or release, nor shall be deemed to waive or release, CONTRACTOR from any obligations or limiting other remedies that may be available to SCDOT,

b. SCDOT Step-In

- i. Subject to any surety rights under surety bond(s) placed for the Project pursuant to Article VI.B., SCDOT shall have the right, but not the obligation, to pay such amounts and or perform such acts as may then be required of CONTRACTOR under the Agreement or contracts with consultants, subcontractors, subconsultants, vendors, or suppliers, whether assigned to SCDOT.
 - ii. SCDOT may appropriate any or all materials and equipment on the Site as SCDOT determines may be suitable and acceptable and, if and when consistent with the terms of any surety bond(s) placed pursuant to Article VI.B, SCDOT may direct the Surety to complete the Project, may enter into an agreement for the completion of the Project (with the surety or another contractor), or may complete the Project itself. If SCDOT exercises any right to perform any obligations of CONTRACTOR, then SCDOT may, but is not obligated to, among other things: (A) perform or attempt to perform, or cause to be performed, such work; (B) spend such sums as SCDOT deems necessary and reasonable to employ and pay such architects, engineers, consultants, and contractors, and obtain materials and equipment as may be required to complete such work; (C) execute all applications, certificates, and other documents as may be required to complete the Project, including paying such amounts and performing such other acts as may then be required from CONTRACTOR pursuant to its subcontracts with consultants, subcontractors, vendors, and suppliers; (D) modify or terminate any contractual arrangements; (E) take any other actions that SCDOT may, in its sole discretion, consider necessary to complete the Project; and (vi) prosecute and defend any action or proceeding incident to completion of the Project.
 - iii. SCDOT may deduct from any amounts payable by SCDOT to CONTRACTOR such amounts payable by CONTRACTOR to SCDOT, including those damages listed in clause c. below.
- c. Performance Security
- i. SCDOT may make demand upon and enforce any surety bond, and make demand upon, draw on and enforce and collect any letter of credit, guaranty or other payment or performance security available to SCDOT under this Agreement, with respect to such Contractor Default in any order.
 - ii. SCDOT will apply the proceeds of any such action to the satisfaction of CONTRACTOR's obligations under this Agreement, including payment of amounts due to SCDOT.
 - iii. The provisions of clauses (i) and (ii), shall not apply where access to any such surety bond, letter of credit, guaranty or other payment or

performance security is for the purpose of satisfying damages owing to SCDOT, in which case SCDOT shall be entitled to make demand, draw, enforce and collect regardless of whether Contractor Default is subsequently cured.

- iv. SCDOT will notify CONTRACTOR at the same time or promptly after it takes any action to make demand upon, draw on, enforce or collect any such surety bond, letter of credit, guaranty or other payment or performance security.

d. Damages

- i. Without limiting SCDOT's right to deduct in the event of self-performance under clause 3.b. above, and except as limited by SCDOT's agreement to liquidate certain damages as specified in the Agreement, SCDOT shall be entitled to recover any and all damages available at law on account of the occurrence of a Contractor Default. CONTRACTOR shall owe any such damages that accrue after the occurrence of Contractor Default regardless of when any notice regarding any Contractor Default is given or whether Contractor Default is subsequently cured. Such damages include, but are not limited to:
 - a) the aggregate of reimbursements owing SCDOT;
 - b) any liquidated or stipulated damages accrued;
 - c) 125% of the amounts SCDOT deems advisable to cover any existing or threatened claims of consultants, subcontractors, subconsultants, vendors, suppliers, other laborers, or other persons or entities;
 - d) amounts of any losses incurred or reasonably expected to be incurred by SCDOT in completing the Project;
 - e) the cost to complete or remediate uncompleted or other nonconforming work, plus an administrative charge equal to 10% of such costs;
 - f) throw-away costs for unused portions of the completed portions of the Project
 - g) increased financing costs of SCDOT, if any,
 - h) other damages or amounts that SCDOT has or will be incurred to rectify any breach or failure to perform by CONTRACTOR and/or to bring the condition of the Project to the standard it would have been in if CONTRACTOR had complied with its obligations to carry out and complete the Work in accordance with the Contract Documents; and
 - i) other damages or amounts that SCDOT has determined are or may be payable to SCDOT under this Agreement.

- ii. Where this Agreement is terminated, the damages recoverable by SCDOT shall also include the present value of:
 - a) actual and projected costs to SCDOT to terminate, take over the Project, re-procure and replace CONTRACTOR;
 - b) actual and projected delay costs; and
 - c) actual and projected increases in costs to SCDOT to complete the Project.
- iii. Damages owed to SCDOT under this clause c. shall bear interest at the statutory rate of interest under S.C. Code Ann. 34-31-20 from and after the date any amount becomes due to SCDOT until the date paid. The interest rate shall accrue on all amounts SCDOT has had to pay in excess of the remaining balance of the Contract Price from the date of SCDOT's payment.
- iv. Additional Provisions pertaining to costs.
 - a) If, after termination, it is determined that the Contractor was not in default, or that the default was excusable, the rights and obligations of the parties shall be the same as a termination by SCDOT for its convenience.
 - b) In lieu of the provisions of this Article XVII for terminating this Agreement for cause, SCDOT may pay CONTRACTOR for the work already completed in accordance with the Agreement and may treat the work remaining undone as if they had never been included or contemplated by this Agreement. No claim under this clause (C) will be allowed for prospective profits on, or any other compensation relating to, work remaining and uncompleted by CONTRACTOR.
- e. Termination of the Agreement by SCDOT.
 - i. CONTRACTOR acknowledges and agrees that any Contractor Default would result in material and substantial harm to SCDOT's rights and interests under this agreement, and therefor justifies termination of this Agreement unless fully and completed cured within the applicable cure period, if any, under clause XVII.A.2.
 - ii. Upon expiration of any applicable cure period (if any), and after complying with other obligations of SCDOT, if any, under any surety bonds provided by CONTRACTOR under Article VI.B., if CONTRACTOR's surety providing such bond(s) refuses to complete the work or fails to take over the work under the terms of the performance bond, then SCDOT may in its sole discretion terminate this Agreement for cause. If SCDOT terminates this Agreement for cause, SCDOT shall deliver a notice to the CONTRACTOR so stating, and termination will be

effective three days after dispatch, unless otherwise specified in such notice.

f. Joint and Several Liability of CONTRACTOR and Surety/ies

If a Contractor Default occurs, CONTRACTOR, and any surety providing the bond(s) pursuant to Article VI.B shall be jointly and severally liable to SCDOT for all costs, damages, and expenses of SCDOT listed under clause XVII.A.3.d., including specifically any interest that accrues thereon, whether by virtue of late payment by CONTRACTOR or late payment by surety.

g. Final Release

Except as otherwise expressly provided in this Agreement, if this Agreement is earlier terminated for any reason, then SCDOT's payment to CONTRACTOR of the amounts required under this Agreement (if any) shall constitute full and final satisfaction of, and upon payment SCDOT shall be forever released and discharged from, any and all claims, causes of action, suits, demands and losses, known or unknown, suspected or unsuspected, that CONTRACTOR may have against SCDOT caused by, arising out of, relating to, or resulting from this Agreement or termination thereof, or the Project. Upon such payment, CONTRACTOR shall execute and deliver to SCDOT all such releases and discharges as SCDOT may reasonably require to confirm the foregoing, but no such written release and discharge shall be necessary to give effect to the foregoing satisfaction and release.

B. Suspension of the work for cause

1. Notwithstanding the notice and cure period provisions of this Article XVII, if not substantially cured promptly after SCDOT notifies CONTRACTOR of any of the following, SCDOT has the authority to suspend the Work by written order, wholly or in part, for CONTRACTOR's failure to:
 - a. handle (i) Hazardous Waste, or (ii) any archaeological, paleontological, biological, or cultural resource, in any case, in accordance with prudent industry practices, applicable laws, governmental approvals, or permits; or
 - b. comply with any law, governmental approval or permit.
2. If not substantially cured within three days after SCDOT delivers notice thereof to CONTRACTOR, SCDOT has the authority to suspend the Work by written order, wholly or in part, for CONTRACTOR's failure to:
 - a. observe any conditions to commencement of certain portions of the scope of the Work and thereafter commences performance;
 - b. provide proof of required insurance coverage hereunder;

- c. maintain any surety bond(s) required hereunder;
 - d. correct any nonconforming work; or
 - e. perform the scope of the work in compliance with the Agreement.
3. CONTRACTOR shall promptly comply with any such written suspension order, even if it disputes the grounds for suspension. CONTRACTOR shall promptly recommence performance of the scope of the work upon receipt of written notice from SCDOT directing CONTRACTOR to resume performance. SCDOT will lift the suspension order promptly after CONTRACTOR fully cures and corrects the applicable breach or failure to perform or any other reason for the suspension order ceases to apply.
 4. SCDOT shall have no liability to CONTRACTOR in connection with any such suspension, and CONTRACTOR shall have no right to any adjustment in the Contract Price, additional costs, or additional time on the then-current CPM Schedule in connection with any suspension of Work founded on any of the grounds set forth in this clause XVII.B.
 5. If SCDOT orders suspension of Work on one of the foregoing grounds but it is finally determined under the Agreement's dispute resolution procedures that such grounds did not exist, it shall be treated as a suspension for SCDOT's convenience under clause XVII.C.
- C. Suspensions for Convenience; Suspensions for Safety
1. SCDOT may, at any time and for any reason, by written notice, order CONTRACTOR to suspend all or any part of performance of the scope of the work for the period of time that SCDOT deems appropriate for the convenience of SCDOT. CONTRACTOR shall promptly comply with any such written suspension order. CONTRACTOR shall promptly recommence performance of the scope of the work upon receipt of written notice from SCDOT directing CONTRACTOR to do so.
 2. CONTRACTOR shall be entitled for additional time, on a day-by-day basis (or for such additional time, in SCDOT's sole discretion), to achieve Substantial Completion for each day of delay to the CPM Schedule caused by or will result in an identifiable and measurable disruption of an activity on the critical path under the then-current CPM Schedule, after consumption of all then-available float, any such suspensions directed by SCDOT for its convenience; provided, however, that
 - a. SCDOT shall have the right to direct suspensions of the work for convenience not exceeding 48 hours each, up to a total of 144 hours during the term before any such CONTRACTOR entitlement to additional time shall accrue;

- b. SCDOT may nonetheless suspend the work for its convenience for lack of appropriations, in which case, any such suspension shall not serve to diminish SCDOT's balance of 144 hours then-existing, but CONTRACTOR shall be entitled to additional time and costs under this clause C for the duration of any such suspension. Subject to clause c. below, if the duration of suspensions for convenience reaches 270 days continuously, then SCDOT will be deemed to have terminated this Agreement for its convenience;
 - c. SCDOT may suspend the work for its convenience during any period of governmental shutdowns, government-declared restrictions, or other direction of the State or federal executive (including specifically any quarantine or other governmental and non-governmental measures intended to limit the spread of disease), and the duration of any such suspension shall not serve to diminish SCDOT's balance of 144 hours then-existing, nor shall continuation of any such suspension beyond 270 days continuously shall not be deemed to be a termination for SCDOT's convenience;
 - d. SCDOT may suspend the work for its convenience upon discovery of any known or suspected Hazardous Waste or any known or suspected archaeological, paleontological, biological, or cultural resource, and without limiting clause B.1.a above, the duration of any such suspension shall not serve to diminish SCDOT's balance of 144 hours then-existing, nor shall continuation of any such suspension beyond 270 days continuously shall not be deemed to be a termination for SCDOT's convenience.
3. CONTRACTOR shall not be entitled to any additional costs incurred or additional compensation arising out of, relating to, resulting from, or caused by any such suspension directed by SCDOT for its convenience not exceeding 48 hours each, up to a total of 144 hours during the term, but CONTRACTOR shall be entitled to actual, direct, and documented costs incurred resulting from suspensions directed by SCDOT for its convenience beyond any 48 hour period or beyond the aggregate of 144 hours, so long as CONTRACTOR establishes in any Contract Change Request that any delay to the CPM Schedule could not have reasonably been mitigated or avoided, and subject to the following further limitations:
- a. CONTRACTOR shall not be entitled to any disruption damages in connection with any additional costs claimed with respect to any suspension directed by SCDOT for its convenience;
 - b. CONTRACTOR shall not be entitled to any punitive, indirect, special, incidental, or consequential damages in connection with any additional costs claimed pursuant to any suspension directed by SCDOT for its convenience;
 - c. Delay and such other actual, direct, and documented additional incremental costs shall not exceed those calculated pursuant to Section 105.16.5 of the

SCDOT Standard Specifications, with the exception of extended job site overhead rates which shall be as set forth in Exhibit 5 of the RFP.

4. CONTRACTOR shall not be entitled to an extension of time or additional costs if the delay arising out of, relating to, or resulting from any suspension directed by SCDOT for its convenience is concurrent with any other unrelated delay (Concurrent Delay as defined in Article VII) to an activity on the critical path under the then-current CPM Schedule for which CONTRACTOR is responsible under this Agreement.
5. Notwithstanding anything to the contrary herein, CONTRACTOR acknowledges that among SCDOT's functions and purposes under SC. Code Ann. 57-1-30(B) is to provide safe transportation for the movement of people and goods throughout the state, and accordingly, SCDOT may issue an order suspending work wholly or in part and to take appropriate action when public safety is jeopardized. CONTRACTOR shall promptly comply with any such written suspension order. CONTRACTOR shall promptly recommence performance of the scope of the work upon receipt of notice from SCDOT directing CONTRACTOR to resume performance. Any such suspension shall not be, nor be deemed to be, (a) a suspension directed by SCDOT for its convenience or (b) a suspension for cause under clause XVII.A.3.e, requiring notice and opportunity to cure or otherwise. SCDOT shall have no liability to CONTRACTOR in connection with any such suspension, and CONTRACTOR shall have no basis to submit a Contract Change Request or otherwise claim entitlement to additional cost or accommodation of delay.

D. Responsibilities of CONTRACTOR During Suspension Periods

During any suspension periods directed by SCDOT hereunder, CONTRACTOR shall continue to be responsible for the Project and shall prevent damage, loss or injury to the Project. Without limiting the generality of the foregoing, CONTRACTOR shall specifically provide for drainage, protect any known or suspected Hazardous Waste or known or suspected archaeological, paleontological, biological, or cultural resources (including taking affirmative steps to protect the site from vandalism and unauthorized investigations), protect the site from accidental damage, heavy rainfall, runoff, and shall erect necessary temporary structures, signs or other facilities required to maintain the Project. CONTRACTOR shall also maintain all insurance policies and bonds required to be in placed under this Agreement, comply with all applicable governmental approvals and other permits. CONTRACTOR shall, unless otherwise directed by SCDOT, continue to be responsible for traffic control, erosion control, and maintenance of the roadway in accordance with this Agreement.

E. Termination for Convenience

1. SCDOT reserves the right to terminate the Agreement at any time, in whole or in part, and upon 30 days written notice to CONTRACTOR, if SCDOT determines it

to be in the public interest. Should the Agreement be so terminated by SCDOT for its convenience, CONTRACTOR shall be paid for the value of the work, based upon the Schedule of Values, performed to the effective date of termination and reasonable demobilization costs, together with any reasonable, pre-agreed cancellation charges by vendors, suppliers, and subcontractors. CONTRACTOR shall also be entitled to the cost of securing that portion of the work as directed by SCDOT, provided such cost is reasonable and is approved by SCDOT. In no event, shall CONTRACTOR recover any amount for work not performed. The total payment to CONTRACTOR pursuant to any termination by SCDOT for its convenience shall not exceed the Contract Price.

2. Termination of all or a portion of this Agreement shall not relieve CONTRACTOR of any responsibility it would otherwise have for the work completed, or for any claims arising from that work.
3. For avoidance of doubt, any termination by SCDOT for lack of appropriations would be a termination for convenience under this clause E.

F. Responsibilities of CONTRACTOR Following Notice of Termination of the Agreement

1. CONTRACTOR shall timely comply with the following provisions independently of, and without regard to, the timing for determining, adjusting, settling, and paying any amounts due CONTRACTOR or SCDOT on account of termination, if any:
 - a. CONTRACTOR shall promptly deliver to SCDOT or its designee possession of all Project Documents, as defined in Article II.F, in CONTRACTOR's possession or control that relates to the Project and that SCDOT deems necessary for completion of the Project;
 - b. CONTRACTOR shall discontinue performance of the scope of the Work, withdraw from the Site, and shall remove materials, equipment, tools, and instruments used by, and any debris or waste materials generated by CONTRACTOR and any subcontractor, vendor, or supplier in the performance of the scope of the Work;
 - c. If and as directed by SCDOT, CONTRACTOR shall confirm the assignment to SCDOT of any contracts with consultants, subcontractors, subconsultants, vendors, or suppliers, and CONTRACTOR shall terminate, at its sole cost, any such contracts not assigned;
 - d. CONTRACTOR shall otherwise promptly and orderly transition the work, demobilize, and transfer management, care, custody, and control of the Project to SCDOT.
2. If SCDOT determines that CONTRACTOR has failed to comply with the foregoing, then upon subsequent notice from SCDOT to CONTRACTOR making

reference to this clause, CONTRACTOR acknowledges and agrees that it shall be deemed to have surrendered its access rights to the Site.

3. CONTRACTOR shall, and shall cause its consultants, subcontractors, subconsultants, vendors, and suppliers to, complete all of the foregoing prior to the effective date of the termination of the Agreement as set forth in the notice to CONTRACTOR.

XVIII. DISADVANTAGED BUSINESS ENTERPRISES

The DBE goal on this Project is 12 percent. Whether or not there is a DBE contract goal on the contract, the Proposer is strongly encouraged to obtain the maximum amount of DBE participation feasible on the contract. The selected CONTRACTOR is required to report all DBE participation through the DBE Quarterly Reports required by Part B of the SCDOT DBE Supplemental Specifications. SCDOT will have the right to audit all documentation regarding DBE participation in the Project.

XIX. ON-THE-JOB TRAINING REQUIREMENTS

There is an On-The-Job Training requirement for this Project. The CONTRACTOR shall comply with the requirements, including the number of persons to be trained, provided in the Specific Equal Employment Opportunity Responsibilities Training Special Provisions within the Federal Aid Supplemental Specifications found in Exhibit 5. The CONTRACTOR shall submit its plan for On-the-Job Training to SCDOT for written approval prior to commencing construction activities.

XX. RECORD RETENTION

- A. CONTRACTOR shall maintain the following documents for a period of three years or a period equal to the warranty period, whichever is longer, after Final Completion of the Project:
 1. All CONTRACTOR samples and test reports;
 2. Daily Diaries and any other documents required to be retained in accordance with the CQMP.
- B. During the retention period, SCDOT will be granted access to those documents upon reasonable notice. At any time during the retention period, SCDOT will have the option of taking custody of the documents. CONTRACTOR shall obtain a written release from SCDOT prior to destroying the records after the retention period.

XXI. AS-BUILTS

- A. In addition to those documents set forth elsewhere in this Agreement, CONTRACTOR shall provide to SCDOT prior to Final Completion, complete sets of as-built drawings (See Article XXI.D for details). As-built plans consist of the final version of the design

- plan CADD drawings that incorporate all changes, including any adjustments, relocations, additions and deletions that occurred during construction. CONTRACTOR shall certify that the as-built plans are a true and correct representation of the work as constructed. If any design changes occur during construction, the plan sheets (or any other “job site record document” with a seal) revised after award of contract shall include a complete accounting and detail of the revisions and design changes. The P.E. responsible for the revisions shall seal each altered plan sheet (or any other “job site record document” with a seal). This documented information is to be part of the As-Built Plan requirements. The CONTRACTOR shall develop as-built plans in accordance with the SCDOT Manual of Instructions for the Preparation of As-Built Plans, edition effective as of the release of the Final RFP.
- B. Information regarding major revisions to the plans shall be noted in a revision box on the plans. The information listed in the revision box shall include: the initiator of the revision, a brief explanation of the nature of the revision, and acceptance and approval from CONTRACTOR, along with associated dates.
- C. In addition to the revisions that incorporated changes during construction, the as-built plans shall include the following information gathered during construction:
1. The location and elevation of foundations remaining below grade.
 2. The final profile of each bridge constructed. The profile shall include the elevation along the centerline (or as specified by SCDOT) and a line three feet inboard of each gutter line. Points on the profile shall be taken at no greater than 25-foot intervals and shall include the beginning and end of each span.
 3. If any structure has pile foundations, information concerning the pile driving operation shall be listed to include pile and driving equipment data, final pile bearing, elevation of pile tip when plan bearing was obtained, final pile tip elevation, penetration into the ground, and PDA or WEAP analysis data. This information shall be entered on each footing or bent sheet, or be included as a new sheet inserted immediately following the pertinent footing or bent sheet.
 4. If any structure has drilled shaft foundations, information concerning the installation of the shaft shall be listed to include the drilled shaft report. This information shall be entered on each footing or bent sheet, or be included as a new sheet inserted immediately following the pertinent footing or bent sheet.
 5. The final horizontal location of all existing and relocated utility lines and structures that are within the right-of-way. Include approved Utility Agreements, No Cost/No Conflict Letters, and Encroachment Permits.
 6. The final location and elevations of all pipes, culverts, and drainage structures.
 7. To include all right-of-way revisions, permissions, and an updated right-of-way data sheet to show the date and manner of acquisition of each tract

- a. As-built plans shall be submitted as two full size (36 inch x 22 inch) copies and one (1) copy on compact disc in a format acceptable to SCDOT. The levels and symbology of the as-built CADD drawings shall conform to SCDOT standard levels and symbology used to develop the design drawings for the Project.

XXII. ESCROW PROPOSAL DOCUMENTS

The Contractor shall submit bid documentation used to prepare the technical and cost proposals for this contract to the Department in accordance with the Supplemental Specification entitled Escrow Bid Documentation dated October 1, 2014.

XXIII. DISPUTE RESOLUTION

Each party hereby waives a trial by jury regarding any dispute between them arising out of this Contract and any such trial will be a non-jury trial before the South Carolina Circuit Court in Richland County.

In the event of a dispute between the parties, it shall be a condition precedent to litigation that the parties submit the dispute to the Standing Dispute Review Board pursuant to the Claims Procedure set forth in the Project Supplemental Specifications.

CONTRACTOR consents that any papers, notices, or process necessary or proper for the initiation or continuation of any disputes, claims, or controversies relating to the Agreement, any court action in connection therewith, or for the entry of judgment on any award made, may be served on CONTRACTOR by certified mail (return receipt requested) addressed to CONTRACTOR at the address provided in Article XXVI. Notice by certified mail is deemed duly given upon deposit in the United States mail.

XXIV. SCDOT'S AGENT

SCDOT will appoint an individual who will be authorized to act on behalf of SCDOT, with whom CONTRACTOR may consult at all reasonable times, and whose instructions and decisions will be binding upon SCDOT as to all matters pertaining to this Agreement and the performance of the parties hereunder.

XXV. ASSIGNABILITY

The Contract shall not be assignable by CONTRACTOR without the prior written consent of SCDOT. SCDOT may assign the Contract without the consent of CONTRACTOR.

XXVI. GENERAL PROVISIONS

- A. This Agreement shall be governed by and interpreted in accordance with the substantive laws of the State of South Carolina.
- B. Headings and titles of the various parts of this Agreement are for convenience of reference only and shall not be considered in interpreting the text of this Agreement.

Modifications or amendments to this Agreement must be in writing and executed by duly authorized representatives of each party.

- C. In the event that any portion or all of this Agreement is held to be void or unenforceable, the parties agree to negotiate in good faith to reach an equitable agreement which shall affect the intent of the parties as set forth in this Agreement. For purposes of construction of this Agreement, this Agreement will be considered to have been drafted by both parties and will not be construed against SCDOT because it was drafted by SCDOT.
- D. All notices pertaining to this Agreement shall be in writing and, if to SCDOT, will be sufficient when sent registered or certified mail to SCDOT addressed as follows:

Deputy Secretary for Engineering
South Carolina Department of Transportation
Post Office Box 191
Columbia, South Carolina 29202-0191

All notices to CONTRACTOR shall be sufficient when sent registered or certified mail to CONTRACTOR addressed as follows:

(Insert CONTRACTOR'S address here)

- E. The Contract Documents set forth the full and complete understanding of the parties as of the Effective Date defined herein, and supersedes any and all prior agreements, representations, and understandings of any kind.
- F. The parties make no representations, covenants, warranties or guarantees, express or implied, other than those expressly set forth herein. The parties' rights, liabilities, responsibilities and remedies within respect to the work shall be exclusively those expressly set forth in this Agreement.
- G. In no event shall any failure by either party hereto to fully enforce any provision to this Agreement be construed as a waiver by such party of its right to subsequently enforce, assert or rely upon such provision.
- H. Nothing in this Agreement is intended to create any contract rights for any party other than SCDOT and CONTRACTOR, nor are any third-party beneficiary rights intended to be created hereby.
- I. All obligations of SCDOT hereunder are subject to all applicable law and appropriations by the South Carolina General Assembly. The obligation of SCDOT to make any payments under this Agreement does not constitute an indebtedness of the State of South Carolina within the meaning or application of any constitutional provision or limitation and does not constitute a pledge of the faith, credit or taxing power of the State of South Carolina or any political subdivision thereof within the meaning or application of any constitutional provision or limitation.

CERTIFICATION OF CONTRACTOR

I hereby certify that I am the duly authorized representative of CONTRACTOR and that neither I nor the above CONTRACTOR I here represent has:

employed or retained for a commission, percentage, brokerage, contingent fee, or other consideration, any firm or person (other than a bona fide employee working solely for me or the above CONTRACTOR) to solicit or secure this contract;

agreed, as an express or implied condition for obtaining this contract, to employ or retain the services of any firm or person in connection with carrying out the contract, or

paid, or agreed to pay, to any firm, organization or person (other than a bona fide employee working solely for me or the above CONTRACTOR) any fee, contribution, donation, or consideration of any kind for, or in connection with, procuring or carrying out the contract except as here expressly stated (if any);

either directly or indirectly, entered into any agreement, participated in any collusion, or otherwise taken any action, in restraint of free competitive bidding in connection with the submitted proposal.

By execution of this Agreement, CONTRACTOR certifies CONTRACTOR and all CONTRACTOR's consultants, sub-consultants, contractors, employees and agents will comply with South Carolina's Ethics, Government Accountability, and Campaign Reform Act of 1991, as amended. The following statutes require special attention: (a) Offering, giving, soliciting, or receiving anything of value to influence action of public employee - §8-13-790, 8-13-705, 8-13-720; (b) Recovery of kickbacks - §8-13-790, (c) Offering, soliciting or recovering money for advice or assistance of public official - §8-13-720, (d) Use or disclosure of confidential information - §8-13-725, (e) Persons hired to assist in the preparation of specifications or evaluation of bids - §8-13-1150, (f) Solicitation of state employees - §8-13-755, 8-13-760 and §8-13-725, (g) False Claims Act -§16-13-240. The state may rescind any contract and recover all amounts expended as a result of any action taken in violation of this provision.

I acknowledge that this certificate is to be furnished to the Department, the Federal Highway Administration, and the U. S. Department of Transportation, and is subject to applicable State and Federal laws, both criminal and civil.

I acknowledge that giving false, misleading, or incomplete information on this certification may subject me to prosecution under Section 16-9-10 of the South Carolina Code of Laws.

DRUG-FREE WORKPLACE CERTIFICATION

In accordance with Section 44-107-30, South Carolina Code of Laws (1976), as amended, and as a condition precedent to the execution of this agreement, the undersigned, who is an authorized representative of the CONTRACTOR certifies on behalf of the CONTRACTOR that the PROPOSER will provide a drug-free workplace by:

- (1) publishing a statement notifying employees that the unlawful manufacture, distribution, dispensations, possession, or use of a controlled substance is prohibited in the CONTRACTOR's workplace and specifying the actions that will be taken against employees for violations of the prohibition;
- (2) establishing a drug-free awareness program to inform employees about:
 - (a) the dangers of drug abuse in a workplace;
 - (b) the person's policy of maintaining a drug-free workplace;
 - (c) any available drug counseling, rehabilitation, and employee assistance programs; and
 - (d) the penalties that may be imposed upon employees for drug violations;
- (3) making it a requirement that each employee to be engaged in the performance of the agreement be given a copy of the statement required by item (1);
- (4) notifying the employee in the statement required by item (1) that, as a condition of employment of this agreement, the employee will:
 - (a) abide by the terms of the statement; and
 - (b) notify the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five days after the conviction;
- (5) notifying the South Carolina Department of Transportation within ten days after receiving notice under item (4)(b) from an employee or otherwise receiving actual notice of the conviction;
- (6) imposing a sanction on, or requiring the satisfactory participation in a drug abuse assistance or rehabilitation program by, any employee convicted as required in Section 44-107-50; and
- (7) making a good faith effort to continue to maintain a drug-free workplace through implementation of items (1), (2), (3), (4), (5), and (6)

By execution of this Agreement CONTRACTOR certifies CONTRACTOR and all CONTRACTOR's consultants, sub-consultants, contractors, employees and agents will comply with all applicable provisions of the Drug-Free Workplace Act, Title 44, Chapter 107 of the South Carolina Code of Laws, as amended.

A Schedule of Values, submitted by the selected PROPOSER and approved by SCDOT, will be included with the completed agreement.

EXHIBIT 3

SCOPE OF WORK

Located in the heart of South Carolina, the Carolina Crossroads I-20/26/126 Corridor Improvement Project (Carolina Crossroads Program) is the number one interstate priority for South Carolina. The primary purpose of the proposed Carolina Crossroads Program is to implement a transportation solution(s) that would improve mobility and enhance traffic operations by reducing existing traffic congestion within the I-20/26/126 corridor while accommodating future traffic needs.

Intent and Definitions Relating to Phased Project Delivery

For the purposes of this contract, the following definitions apply relative to the development of the Project.

The **Carolina Crossroads (CCR) Program** is a corridor improvement which includes widening of I-20, I-26, and I-126 and interchange improvements at the following interchanges:

- I-20/I-26 System Interchange
- I-26/I-126 System Interchange
- I-20/Sunset Boulevard (EB directional entrance ramp only)
- I-20/Bush River Road
- I-20/Broad River Road
- I-26/Broad River Road
- I-26/Lake Murray Boulevard
- I-26/Harbison Boulevard
- I-26/Piney Grove Road
- I-26/St. Andrews Road
- I-26/Bush River Road
- I-26/Sunset Boulevard (EB exit ramp only)
- I-126/Colonial Life Boulevard

These improvements are all covered by a single Final Environmental Impact Statement (FEIS)/Record of Decision (ROD), a single USACE Section 401/404 permit, and two Interchange Modification Reports. The CCR Program is being delivered in phases through multiple construction projects. It is critical to the success of the CCR Program that work undertaken in each phase is compatible with the ultimate design intent and the commitments made in the FEIS/ROD.

The **Selected Alternative (SA)** is the schematic design configuration for the CCR Program that is the basis of the FEIS/ROD and IMRs.

The **Modified Selected Alternative (MSA)** includes modifications made to the SA after the FEIS/ROD was approved to enhance operations, minimize impacts, and facilitate construction of the CCR Program in phases. The MSA remains a schematic design configuration and a graphical depiction of the MSA is included in Project Information Package. Since the MSA is a schematic design, final analysis and engineering will be required.

The **Ultimate Design** is the design performed by the Proposer which may further modify the MSA if Proposer chooses to make modifications to the MSA as part of their delivery of the scope

EXHIBIT 3 – SCOPE OF WORK

of work for an individual phase. The Ultimate Design shall include transportation infrastructure elements which are consistent with and tie to the overall MSA schematic design for the Project as depicted in the drawings provided in the Project Information Package.

The **Interim Work** includes, but is not limited to coordination, design, and construction activities necessary to tie to existing conditions at the Project termini. These interim tie-ins may include, but not limited to, temporary paving, grading, drainage, safety hardware, signage, temporary lane configurations and tapers in areas where the Ultimate Design/MSA design has not been constructed.

The **Proposed Work** will be constructed as part of this phase and will be comprised of design and construction of portions of a combination of Ultimate Design, Interim Work, and any other components necessary to achieve the Scope of Work for this phase of the CCR Program.

Scope of Work – Phase 1

A single Interchange Modification Report (IMR) was approved by FHWA on June 4, 2019 for the System to System Interchanges (I-20 and I-26), (I-26 and I-126) and their adjacent interchanges including I-20 and Bush River Road, I-20 and Broad River Road, I-26 and Bush River Road, I-126 and Colonial Life Blvd., I-26 and St. Andrews Road, and I-26 and Piney Grove Road. Any changes to the approved access locations and their associated geometry as documented in the IMR will require Federal and State approval. If a Proposer's design, through an approved ATC only, requires a revised IMR, the Proposer is fully responsible for justifying and obtaining SCDOT and FHWA Approval.

Relative to the Carolina Crossroads Program, the purpose of this project is to construct a new interchange at the intersection of Colonial Life Blvd. at I-126 in Richland County. Work includes all effort necessary to complete the design and construction of a grade separated interchange that provides access to and from Colonial Life Blvd. from Eastbound and Westbound I-126 and Westbound I-26. The exit design and construction from I-26 Westbound shall account for three mainline lanes on I-26 with 12' inside and outside shoulders. The exiting width shall account for 2 lanes exiting with 12' inside and outside shoulders. The truck traffic on I-26 exceeds 250 directional design hour volume (DDHV), therefore, 12' paved shoulders shall be provided on the inside and outside unless stopping sight distance requires more. Where 12' outside paved shoulders are required, provide an additional 2' earthen shoulder adjacent to the paved shoulder. The intersection of Colonial Life Blvd. at Arrowwood Road (S-40-287) shall be grade separated. Morninghill Drive/Frontage Road (S-40-2891) is to be relocated and reconstructed from the intersection with Bush River Road to the intersection with Lawand Drive (S-40-1019) to accommodate the Ultimate Design. Lawand Drive is to be realigned and reconstructed from the intersection with the relocated Frontage Road (S-40-2891) to access Arrowwood Road to accommodate the ultimate design.

Another purpose of this project is to provide additional storage length for traffic exiting I-26 Eastbound to US-378 in Lexington County. The project includes all work necessary to complete the design and construction of a minimum 4800' ramp from I-26 Eastbound to access US 378. The exit design and construction from I-26 Eastbound shall account for 3 lanes on I-26 with 12'

EXHIBIT 3 – SCOPE OF WORK

inside and outside shoulders. The exiting width to US 378 shall account for one “exit only” lane and one shared through/exit lane exiting with appropriate shoulders. The truck traffic on I-26 exceeds 250 DDHV, therefore, 12’ paved shoulders shall be provided on the inside and outside of I-26 unless stopping sight distance requires more.

Work also includes reconstructing a portion of I-126 to 4 through lanes in each direction with appropriate inside and outside shoulders. Remove and dispose of the existing Colonial Life Boulevard bridges over Arrowwood Rd. and I-126.

Work also includes the closure of the ramps at the Bush River Rd. and I-26 interchange, and associated improvements to Bush River Rd. Reconstruct the acceleration lane from I-20 eastbound to I-26 eastbound.

Work also includes realignment and reconnecting roads severed by interchange reconstruction and interstate widening.

Work includes designing and installing traffic signals, signing, highway lighting, and ITS conduits.

Work also includes coordination, design, and construction SC Department of Administration owned utilities. See Exhibit 7 for more information.

Work includes relocating the City of Columbia (COC) 30-in PCCP sanitary sewer force main along Tracts 444 and 442 from I-26 Ramp C approximate station 5406+50 left to I-26 Ramp C Station 5423+50 right, and relocating the Lawand Drive Pump Station from the pump station’s current location on Tract 401 to Tract 404. See Exhibit 7 for more information.

Work also includes realigning the existing access road on tract 442. Realign existing gravel road between right of way and bridge. Install gate at control of access line. See Attachment B

Work also includes railroad coordination.

Apply pavement markings in accordance with the Contract Documents.

For a full understanding of the project scope and the criteria of the work, review all Exhibits and Attachment B.

During this Project, the construction is to be completed to accommodate the Ultimate Design within limits stated below, at a minimum, in the column labeled “Construction of the Ultimate Design Footprint”. These areas are to require no significant construction in future phases in order to accomplish the intended function of the MSA (i.e. all pavement and structures are constructed with only limited overlay and/or re-striping required).

The Proposer shall design and construct the Project to tie to existing conditions and lane configurations at the Begin and End of Construction Limits defined in the table below. The interim condition at the conclusion of this Project shall provide the existing number of through

EXHIBIT 3 – SCOPE OF WORK

lanes within the project limits along with any auxiliary lanes required for new or modified ramp connections. Interim Work will be required to achieve the tie-in with existing conditions and interim ties for ramps within the project limits. From the Begin Station to the End Station of the Construction of Ultimate Project Footprint, the through lanes shall be located in their Ultimate location. Install pavement markings that clearly indicate travel lanes, shoulders, and gore areas.

If, in development of their Ultimate Design, the Proposer elects to deviate from the schematic MSA, the Proposer will be required to demonstrate how their Ultimate Design will tie in with the MSA. The tie-in cannot extend beyond the MSA Tie Points in the table below, unless approved by SCDOT.

The limits for beginning and end in the table are provided in direction of travel for each segment.

Relocate and reconstruct Morninghill Drive/Frontage Road/R-7951/Lawand Drive (S-40-1019) to accommodate the Ultimate Design from the intersection with Bush River Road to the intersection with Lawand Drive. Construct retaining wall as necessary between the ramp and Lawand Drive to minimize reconstruction of the wall in future phases. The height of the wall constructed, including the traffic barrier, shall account for the Ultimate Design of the I-126WB to I-26EB flyover. In order to facilitate construction of the I-126WB to I-26EB ultimate flyover, the retaining wall between Lawand Drive and the ramp may be terminated when the temporary alignment of the ramp to the existing flyover is 40' apart, measured from the back of the wall to the edge of paved shoulder.

EXHIBIT 3 – SCOPE OF WORK

Route/Direction of Travel	Construction of Ultimate Design Footprint	Construction Limits	MSA Tie Point	Notes
I-26 Eastbound				
Begin	420+00	Southern end of approach slab of bridge over Saluda River.	420+00	The new median barrier and median drainage shall match the limits of the WB construction.
End	461+50	470+00 (see notes)	461+50	Construct appropriate gore area Mill and overlay I-26 to station 470+00
I-26 Westbound				
Begin	466+00	470+00 (see notes)	466+00	Mill and overlay I-26 to station 470+00
End	410+00	Southern end of approach slab of bridge over Saluda River.	410+00	Design and construct median barrier wall and drainage system to MSA tie point
I-26 Westbound to future I-20 ramps				
Begin	At tie to Ultimate I-26 WB Lanes	Work is included within I-26 WB. See I-26 Westbound - Begin	Work is included within I-26 WB. See I-26 Westbound – Begin	-

EXHIBIT 3 – SCOPE OF WORK

Route/Direction of Travel	Construction of Ultimate Design Footprint	Construction Limits	MSA Tie Point	Notes
End	End of bridge over Saluda River	Set by Proposer (See notes)	I-26RCA Sta.5393+00	Bridge across Saluda River shall be completely constructed to accommodate future I-20 ramp lanes and shoulders. Earthwork and grading necessary to construct bridge end and approach slab shall determine construction limits at a minimum. Slopes shall be in accordance with contract documents.
I-126 Eastbound				
Begin	126P Sta. 21+50	4+50	126P Sta. 17+95	Design and construct the removal of the existing I-26WB to I-126 EB ramp.
End	68+80	75+00	68+80	
Ramp from I-126 Eastbound to Colonial Life Blvd.				
Begin	At a minimum, gore nose and physical nose (RDM Fig. 10.4-A) shall be constructed based on the Ultimate Design.	To be determined by Proposer to tie to interim conditions along I-126 EB (See Notes)	126P Sta. 17+95	Construct wall and barrier along outside shoulder to accommodate Ultimate and interim design conditions. Wall shall extend to the west sufficiently to tie to the MSA Design and terminate.
End	-	-	-	To be designed by Contractor. Tie to new Colonial Life Blvd. interchange

EXHIBIT 3 – SCOPE OF WORK

Route/Direction of Travel	Construction of Ultimate Design Footprint	Construction Limits	MSA Tie Point	Notes
I-126 Westbound				
Begin	Existing painted gore of exit to Colonial Life Blvd.	65+00 (see notes)	Existing painted gore.	Mill and overlay I-126 to station 65+00
End	126p Sta. 21+50	As necessary to tie from lanes in Ultimate design location to existing lanes.	126RBD2 Sta. 4390+00	-
Ramp from Colonial Life Blvd. to I-26 Eastbound				
Begin	-	-	-	To be designed by Proposer. Tie to new Colonial Life Blvd. interchange.
End	Achieve convergence with Ultimate Design for ramp from I-126 WB to I-26 EB.	Make interim tie to ramp from I-126 WB to I-26 EB	Ultimate design for combined Colonial Life and I-126 WB ramps to I-26 EB shall tie to MSA at 126RDB Sta. 3017+26.80	Construct retaining wall between ramp from Colonial Life Blvd. and Ramp from I-126 WB to the limits of Ultimate Design Footprint Construction Construct retaining wall between ramp and Lawand Drive as described in the scope of work.
Ramp from I-126 Westbound to I-26 Eastbound				
Begin	Tie to I-126 WB Ultimate Design	Tie to I-126 WB Ultimate Design	Tie to I-126 WB Ultimate Design	Based on I-126 widening and Colonial Life Blvd. interchange design by Proposer.

EXHIBIT 3 – SCOPE OF WORK

Route/Direction of Travel	Construction of Ultimate Design Footprint	Construction Limits	MSA Tie Point	Notes
End	Achieve convergence of shoulder with the shoulder for Ultimate Design of ramp from Colonial Life Blvd. to I-26 EB. Maximize length of Ultimate design travel way construction while accommodating interim tie.	As necessary to make interim tie to ramp from Colonial Life to I-26 EB prior to existing flyover bridge.	Ultimate design for combined Colonial Life and I-126 WB ramps to I-26 EB shall tie to MSA at 126RDB Sta. 6018+50	Construct walls/barriers along alignment to the limits required by the Ultimate design. Interim design must be tied to the existing ramp to I-26 EB prior to reaching existing bridge approach slab with appropriate horizontal and vertical alignment and superelevation to achieve design criteria.
Ramp from I-126 Westbound to Colonial Life Blvd.				
Begin	Tie to existing painted gore. Reconstruct gore area to accommodate new ramp design while maintaining appropriate outside shoulder width along existing retaining wall.	Tie to I-126 WB	Tie to existing auxiliary lane at painted gore.	-
End	-	-	-	To be designed by Proposer. Tie to new Colonial Life Blvd. interchange.

EXHIBIT 3 – SCOPE OF WORK

Route/Direction of Travel	Construction of Ultimate Design Footprint	Construction Limits	MSA Tie Point	Notes
Ramp from Colonial Life Blvd. to I-126 Westbound				
Begin	-	-	-	To be designed by Proposer. Tie to new Colonial Life Blvd. interchange.
End	Achieve convergence of shoulder with the shoulder for Ultimate Design of I-126 westbound.	As necessary to make interim tie to I-126 westbound.	Maintain distance between the end of Ultimate acceleration lane (end of taper) and the I-20/I-26 split as depicted in the MSA at I26RBD2 Sta. 4390+00	-
I-26 Eastbound Ramp to US 378

PROJECT DESIGN CRITERIA

EXHIBIT 4 – PROJECT DESIGN CRITERIA
--

This exhibit details the criteria by which the project shall be designed and constructed. It is the responsibility of the Engineer to get clarification from the Department if a question arises from the use of the below exhibits. These criteria are divided into subsections as listed below:

Exhibit 4a – Roadway Design Criteria

Exhibit 4b – Structures Design Criteria

Exhibit 4c – Pavement Design Criteria

Exhibit 4d – Traffic Design Criteria

Part 1. Traffic Analysis

Part 2. Work Zone Traffic Control

Part 3. Pavement Marking

Part 4. Signing

Part 5. Traffic Signals

Part 6. Traffic Intelligent Transportation System

Part 7. Lighting

Exhibit 4e – Hydraulic Design Criteria

Exhibit 4f – Geotechnical Design Criteria

Exhibit 4z – Project Deliverables

DESIGN REFERENCES

This exhibit describes the general design considerations and criteria for the proposed roadway approaches, hydraulics, structures, and surveys.

Design standards shall be in accordance with the following design references as supplemented or amended by Sections 4a, 4b, 4c, 4d, 4e, and 4f of this Exhibit. Any variation in design from the included information shall require written approval from SCDOT.

EXHIBIT 4a

ROADWAY DESIGN CRITERIA

1. GENERAL

Prepare the roadway geometric design for the project using the design standards and criteria that are most appropriate based on design speed, functional classification, design traffic volumes, right-of-way, and aesthetics. The design elements shall include, but not be limited to, the horizontal and vertical alignments, cross sectional elements, roadside safety, intersections and interchanges.

2. CRITERIA (ULTIMATE DESIGN)

Classify the terrain as rolling on all routes within the scope of work.

2.1 Functional Classification and Design Speed

The functional classification and design speed for each roadway is as follows:

Interstates		
Road Number	Functional Classification	Design Speed
Interstate 26	Urban Arterial – Freeways	60 mph
Interstate 126	Urban Arterial – Freeways	60 mph

Ramps		
Movement/Ramp Type	Functional Classification	Design Speed
I-126 WB to I-26 EB	Urban Arterial – Freeways	45 mph
I-26 WB to I-126 EB	Urban Arterial – Freeways	40 mph
I-26 WB to I-20	Urban Arterial- Freeways	50 mph
I-20 EB to I-26 EB	Urban Arterial - Freeways	35 mph
Service Interchange Ramps	Urban Arterial – Freeways	40 mph
Service Loop Ramps (new)	Urban Arterial – Freeways	30 mph

NOTE: Combined ramps that carry multiple movements or ramp types shall be designed using the highest design speed of all movements/ramp types carried on the combined ramp.

turn to I-126WB. Remaining length of bridge shall be striped as a flush median.

Morninghill Drive/Frontage Road (S-40-2891/S-40-1019)

- Through Lanes 11 ft.
- Shoulders (outside) 2 ft. C&G and 6.0 ft shelf within existing limits or minimum 6 ft. shoulder
- Median 15 ft. minimum paved within functional area of intersection.

Interstate 26

- Shoulder (outside) 12 ft. paved/2 ft. earth shoulder unless wider width required for stopping sight distance.
- Shoulder (inside) 12 ft. minimum unless wider width required for stopping sight distance. Pave entire inside shoulder.

Minimum 10 ft. paved with concrete median barrier at bridge pier or overhead sign support locations.

Interstate 126

- Shoulder (outside) 10 ft. paved/2 ft. earth or 12 ft. paved with concrete barrier unless wider width required for stopping sight distance.
- Shoulder (inside) 10 ft. minimum unless wider width required for stopping sight distance. Pave entire inside shoulder.

At the tie-in locations as described in exhibit 3, tie to existing conditions in accordance with the SCDOT Roadway Design Manual (RDM).

All dead end roads will be completed with cul-de-sacs. T-turn arounds will only be allowed with prior SCDOT approval.

If the alignment needs to be shifted to accommodate appropriate inside shoulder width due to the bridge pier, overhead sign support, horizontal sight distance, or tying to the existing shoulder width on I-126, then use horizontal curves to develop the transitions based on a 70 mph design speed. Horizontal sight distance shall be based on 60 mph design speed.

All freeway lane drops shall occur from the right side (outside) and shall conform to the recommended guidelines in the SCDOT RDM Section 17.5.1.

In transitioning from existing interstate lane configurations approaching multi-lane exits, develop additional lanes along the interstate mainline using a 300-foot taper length and a minimum of 1,500 feet between consecutive tapers for additional lanes. If the transition for developing additional lanes along the interstate mainline ties to existing within 1500 feet of the beginning/end of an existing taper for a lane drop or ramp lane, create an auxiliary lane connecting the new lane to the existing lane.

Where tie-in locations are within 1000 feet of other proposed roadway re-alignment, intersection improvements, or other work along the same road, resurface the existing roadway to create uniform ridability and appearance.

All crossroad tie-in locations shall not degrade the existing conditions. Concrete islands are to be used as divisional islands within the limits of controlled access for interchange crossing routes. Divisional islands shall match the full width of the median.

2.3 Horizontal Alignments

Develop horizontal curves and superelevation in compliance with SCDOT Roadway Design Manual and the SCDOT Standard Drawings.

For horizontal sight distance, use grade adjusted SSD values along interstates, collector distributors, and ramps where the downgrades are 3 percent or greater.

If modifications to frontage and side roads result in tying into existing roads within a horizontal curve, transition superelevation to existing superelevation in accordance with the SCDOT RDM.

Develop horizontal geometry to only encroach on CSX Railroad right-of-way at a single bridge crossing.

Provide a minimum of 20 feet between proposed edge of any bridge deck and the outermost SCDOT right-of-way line, except in the area of the historic Saluda Canal.

2.4 Vertical Curves, Grades, and Clearances

Develop vertical curves, grades, and clearances in compliance with SCDOT Roadway Design Manual.

Interstate 26, Interstate 126

- Maximum 4% for Urban Arterial – Freeways
- Minimum 0.3%

Spline grades are only acceptable on the ramps within the limits of the gore areas.

Final vertical clearances for overpassing structures shall be as specified in the SCDOT RDM. If the existing vertical clearance at underpass is less than 16 feet retain or improve the existing vertical clearance during construction phases.

For stopping sight distance, use grade adjusted SSD values along interstates, collector distributors, and ramps where the downgrades are 3 percent or greater except as noted otherwise herein.

2.5 Side Slopes

Develop side slopes in compliance with SCDOT Roadway Design Manual.

Any slope steeper than 2:1 shall require SCDOT approval prior to constructing.

2.6 Cross Slopes

Develop cross slopes in compliance with SCDOT Roadway Design Manual.

- Travel Way 50:1 for up to two lanes from crown point
- Travel Way 40:1 third or more lane from crown point

2.7 Clear Zones

Use the SCDOT Roadway Design Manual and the AASHTO *Roadside Design Guide*, 2011, 4th Edition. When a range of values is shown, select higher value.

SCDOT does not typically use a 3H:1V fill slope. See the AASHTO *Roadside Design Guide*, 2011, 4th Edition for clear zone calculations where a 3H:1V fill slope is used.

Use 3H:1V fill slopes only where fill heights are required to match existing conditions and clear zone can be obtained within the Project limits.

For those areas where no guardrail currently exists and no additional lanes or adjacent ramps are proposed, design fill and cut slopes to obtain clear zones and to avoid the need for protection. Where achieving the clear zone requirements results in new right-of-way, wetland impacts, or impacts to immovable obstructions, protect substandard areas contingent upon receiving SCDOT advanced approval.

Where existing fill and cut slopes are presently protected by guardrail and no rigid barrier is proposed, replace damaged guardrail and extend/install new guardrail at locations that do not meet current MASH standard. Also, clear and grind in accordance with SCDOT Engineering Directive (ED) 29.

2.8 Sight Distance

Develop sight distance in compliance with SCDOT Roadway Design Manual.

The requirements of SCDOT RDM Section 4.3 pertaining to decision sight distance (DSD) Avoidance Maneuver E shall apply to all freeway and ramp exits/entrance gores and the beginning of the taper for freeway lane drops with object height of 0.0 feet considered as the pavement marking at the gore.

If necessary, shift the centerline of I-26 EB/WB, alignment of I-126 EB/WB and/or concrete median barrier to provide adequate stopping sight distance throughout the entire length of the horizontal curves.

If necessary, adjust alignment and/or expand shoulders along the inside of curved ramps as necessary to provide the required stopping sight distance throughout the entire length of horizontal curves.

2.9 Ramps

Develop ramps in accordance with SCDOT RDM.

Ramp terminals for “T” intersections shall be aligned perpendicular to the crossroad. Right turn lanes at the ramp terminal onto the crossroad shall flow adjacent to the other ramp lanes and run through the traffic signal.

New ramp terminal profiles must accommodate intersection sight distance horizontally and vertically for crossroads.

2.10 Intersections

Develop intersections in compliance with SCDOT Roadway Design Manual.

Multilane roundabouts are not allowed as an intersection type.

2.11 Pedestrian & Bicycle Facilities

Develop pedestrian facilities in compliance with the AASHTO *Guide for the Planning, Design, and Operation of Pedestrian Facilities* edition 2004, SCDOT Americans with Disabilities Act Transition Plan, December 2014 with updates, and SCDOT Roadway Design Manual.

At a minimum, the following pedestrian facilities shall be accommodated on this project:

S-40-2963 (Colonial Life Blvd):

Reconstruct sidewalk as necessary north of the intersection with W Colonial Life Blvd.. Tie sidewalk along Colonial Life Blvd. to existing sidewalk at project limits.

2.12 Roadside Barriers

Develop roadside barriers in compliance with SCDOT Standard Drawing and the AASHTO *Roadside Design Guide*, 2011, 4th Edition. Include the following items in the work:

Guardrail: Ensure that all new MASH guardrail and end treatments are listed on the Qualified Products Policies & Listings.

Provide non-mow strip under guardrail in accordance with the requirements found in the Exhibit 5, Special Provisions Section 805.

Use additional length guardrail posts with compressed guardrail shoulder break contingent upon receiving SCDOT approval only where Right-of-way or environmental impacts dictate that standard guardrail shoulder break cannot be built. Compressed shoulder cannot be used at end terminals or behind curb.

Cable Median Barrier: Cable median barrier is not allowed.

Concrete Median Barrier: Provide concrete median barrier along Interstate 26 and Interstate 126 where proposed medians are less than 36 feet. Replace existing barrier in areas where Ultimate Design footprint is to be constructed, see Exhibit 3 for additional information. When concrete median barrier is constructed, pave the inside shoulder to the barrier. Use single slope shaped concrete median barriers. At project boundaries where tying to existing barrier, transition from single slope shaped barrier to the existing jersey face barrier in accordance with SCDOT Standard Drawings.

Provide custom design where required in accordance with Exhibit 4b.

Concrete Roadside Barrier (outside)

Concrete Roadside Barrier treatment is required in the following conditions:

- Where the clear zone of an interstate lane, auxiliary lane, or interstate ramp lane overlaps with the shoulder of an adjacent proposed or existing service road.
- Where physical separation is required between the interstate mainline lanes and adjacent ramp or collector-distributor lanes to control access to/from the mainline.
- To provide protection where retaining walls, large pipe/culvert headwalls, or similar linear hazard over 10 feet in length (measured parallel to the roadway centerline) which cause an abrupt/near vertical change in roadside grading greater than 3 feet are located either within the clear zone or within 30 feet of the edge of a travel lane of any roadway.

For determination of the need for barrier protection per the conditions above, the clear zone shall be the full distance as defined in section entitled “Clear Zones” regardless of presence of other protection such as guardrail.

Design and detail Concrete Roadside Barrier as required in Exhibit 4b.

Placement of the concrete barrier walls and retaining walls must accommodate lanes required in the Ultimate Design. For all barriers adjacent to travel lanes, construct the traffic face of the barrier to an elevation that will accommodate the future construction of the Ultimate Design.

If Concrete Roadside Barrier is required beyond the required paved shoulder width based on the Ultimate Design, then the area from the edge of paved shoulder to barrier shall be paved with minimum 8 inches of Hot Mix Asphalt. Place no less than 8 inches of dense graded HMA, including 200 psy Surface Type C as a wearing course. If the back slopes are steeper than 3H:1V then place 4 inch thick concrete slope protection meeting the requirements of Exhibit 4b.

2.13 Right-of-Way and Control of Access

Right-of-Way plans have been issued for the Carolina Crossroads Program under cover Project ID P027662. The CONTRACTOR shall incorporate right-of-way information into the Project plans for record retention by SCDOT.

Right-of-Way plans shall be submitted for this Project.

Include in the Roadway Plans all pertinent information used to establish the right-of-way acquired for this Project. See Attachment B for plans and electronic design files.

All information used to establish CONTRACTOR-Designated Right-of-Way and Additional Right-of-Way shall be provided to SCDOT for processing right-of-way revisions.

As noted in Exhibit 4z, Road Plans shall contain a note stating “Right-of-Way secured under Project ID P027662”.

All right-of-way, including revisions, shall be included in the Project plans for this Project.

See section entitled “Requirements for Horizontal Layout of Walls” in Exhibit 4b for right-of-way requirements adjacent to retaining walls.

Maintain fully controlled access along interstate and all interchange ramps up to the ramp terminals and along crossing roads as depicted in the Project Right-of-Way Plans included in Attachment B.

Design each new or revised exit or entrance ramp to provide spacing between the ramp and adjacent driveways, side streets, or cross streets that is equal to or greater than the spacing depicted in the Project Right-of-Way Plans for each unique location. In addition, maintain or exceed the spacing shown in the Project Right-of-Way Plans layout between adjacent driveways, side streets, and cross streets and the beginning/end of the taper for auxiliary lanes extending from the ramp intersection at each location. Spacing less than what is shown in the Project Right-of-Way Plans will require prior approval from SCDOT.

Unless shown to be denied by changes in Controlled Access in the Project Right-of-Way Plans or otherwise altered by requirements of this section, maintain all existing property accesses, including those not addressed in the Project Right-of-Way Plans, and do not revise control of access limits without SCDOT approval.

At all interchanges which are being reconstructed, provide a concrete divisional/channelizing island to manage access from driveways and sideroads near the interchange. Access at all intersecting side roads and driveways within the area of the new concrete island is to be converted to right-in/right-out or closed based on Right-of-Way instruments.

New Controlled Access fencing is required for the entire project limits. Fencing shall be in accordance with Standard Drawing series 806. Use Chain Link Fence 72” throughout the project corridor for ground mounted applications. At locations where the existing fencing is properly located 72” fencing, the fence may remain if approved by the SCDOT. Where fencing is required to be placed between the interstate or ramp and frontage road where barrier wall is located, use 48” Chain Link Fence on top of barrier. Mount fence posts in drilled or formed holes using approved epoxy or non-

shrink, non-corrosive grout. Fence post anchors mounted atop barrier wall are not allowed unless approved by the SCDOT.

2.14 Design Exceptions

A design exception is being drafted for substandard inside shoulder widths on I-126 at Colonial Life Blvd., which do not meet the SCDOT Roadway Design Manual's required minimum of 10 feet. If approved, this design exception will be provided in Attachment B.

3. CRITERIA (TRANSITION AREAS)

This criteria applies only to portions of the Interim Work which achieve the transition from the Proposed Design to existing conditions or vice versa. Design all ramps and interstate segments in accordance with the Ultimate Design Criteria unless otherwise noted in this section.

3.1 Interstate 126

Use temporary concrete barrier to divide interstate traffic between the new permanent median barrier and existing median barrier which is to remain in place. Inside shoulder widths between edge of travel lane and the temporary barrier shall meet requirements provided in exhibit 4d at a minimum.

Provide lane tapers and/or temporary alignments meeting RDM requirements to tie from the interim lane configurations within the Ultimate Design Footprint to existing conditions. Curved alignments for interim travel patterns within the Ultimate Project footprint shall be designed using superelevation required for the Ultimate Design, upon approval from SCDOT.

3.1.1 I-126 Westbound

Provide protection in accordance with RDM for the ends of existing retaining walls extending parallel to I-126 from the existing I-126 to I-26 EB flyover bridge. Provide pier protection for existing column on the outside of I-126 WB if edge of travel lane within the proposed work is closer to the column than existing conditions.

3.1.2 I-126 Eastbound

Provide pier protection for existing column on the outside of I-126 EB if edge of travel lane within the proposed work is closer to the column than existing conditions.

3.1.3 Interim Condition Pier Protection for Existing Columns along shoulder

Pier protection for the shoulder piers noted above within the proposed work may consist of Temporary Concrete Median Barrier provided that 3 feet is provided between back of the barrier and the existing bridge column. Concrete barrier shall be introduced using appropriate taper and/or have the end protected in accordance with SCDOT Standard Drawings. Shoulder pavement shall extend beneath the temporary barrier and a minimum of two feet behind the barrier.

If above conditions for use of temporary barrier cannot be met, existing columns are to be protected in accordance with SCDOT Standard Drawings.

3.2 Colonial Life Spur Ramp/I-126 WB off Ramp to I-26 EB

Interim design is to include merging the Colonial Life Spur Ramp into the ramp from I-126 WB to I-26 EB. The merge may be a yield condition as long as the I-126 to I-26 traffic is given priority as the through movement. Tie the combined single lane ramp to the existing bridge carrying traffic from I-126 WB to I-26 EB. Do not degrade existing stopping sight distance on the existing bridge.

Use a minimum design speed of 35 mph for horizontal and vertical design for the interim tie-ins at this location.

3.3 I-26 WB Exit to I-126 and Colonial Life Blvd.

Use lane tapers to tie from existing condition on I-26 to tie the existing lanes exiting to I-126 and Bush River Road to the interim lane configuration approaching the new bridge over the Saluda River. Use temporary concrete barrier to block future through movement to I-20 and guide correct traffic onto the ramp to I-126 and Colonial Life Blvd.

3.4 I-126 EB off Ramp to Colonial Life Blvd.

This ramp (adjacent to CSX RR) shall be constructed in the location required by the Ultimate Design. Interim design will only include pavement and pavement markings with tapers or curves meeting RDM requirements to tie from the existing condition on I-126 to the Ultimate Design of the ramp.

3.5 Bush River Road

Reconfigure lanes between existing ramp terminals which will be closed as part of this project to have a flush median between the directions of travel. Reconfigure intersections as necessary based on removal of ramp movements to include, but not limited to, pavement markings, signing, and traffic signals.

EXHIBIT 4a – ROADWAY DESIGN CRITERIA

Remove existing I-26 Eastbound exit to Bush River Road. Reconstruct acceleration lane of the entrance ramp from I-20 Eastbound to I-26 Eastbound.

EXHIBIT 4b

STRUCTURES DESIGN CRITERIA

1. GENERAL

Exhibit 4b contains requirements for:

- The replacement of existing bridges as denoted in the Scope of Work
- Construction of new grade separations for ramps, interstate routes, waterways and other roadways as required for the Project
- Retaining walls, and
- Concrete median barriers and bridge pier protection.

Refer to Attachment B for additional Structures Design Criteria.

2. CRITERIA

2.1 New Highway Bridges

2.1.1 Bridge Design

Design all new bridges in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications, 8th edition. Use the HL-93 design live loading and all vehicles as required by the SCDOT Load Rating Guidance Document.

2.1.2 Seismic Design and Detailing

In accordance with the SCDOT Seismic Design Specifications (SDS) for Highway Bridges, the Bridge Operational Classification (OC) for new bridges on Interstates I-26 and I-126 or their Ramps is “I” and all other new bridges is “II”. For additional requirements, see Revisions to SCDOT Seismic Design Specifications for Highway Bridges in Attachment B. Except SDC A and Single Span Bridges, submit Seismic Design Summary Reports according to the requirements shown in Exhibit 4z along with bridge structure plan submittals.

2.1.3 Corrosion Protection

Provide corrosion protection in accordance with the BDM.

2.1.4 Dimensions

Construct the new bridges with bridge roadway widths that are equal to or greater than the approach roadway widths (traveled way plus median and shoulders) that are specified in Exhibit 4a.

See Section titled “Horizontal Clearances/Pier and Abutment Protection” for horizontal clearance requirements where width is provided for future accommodations.

2.1.5 Vertical Clearances

Provide vertical clearance in accordance with the BDM or other requirements in this Exhibit. Consider the horizontal and vertical geometry as well as superelevation effects associated with the additional lane requirements in section entitled “Dimensions” in computation of vertical clearances for bridges over interstates or interstate ramps. See Exhibit 4e for freeboard requirements for the bridge over the Saluda River.

2.1.6 Horizontal Clearances/Pier and Abutment Protection

Locate all abutments and piers, and associated protection barrier to provide horizontal clearances under the new bridges over interstates and interstate ramps that are sufficient to accommodate roadway widths that are equal to or greater than the roadway widths (traveled way plus median and shoulders) specified in Exhibit 4a and the additional future accommodations required by section titled “Dimensions” in this Exhibit.

Horizontal clearance provided under bridges for future accommodations are to be free of any and all obstructions including but not limited to physical obstacles and non-recoverable/non-traversable slopes.

Provide barrier protection for interior bents and abutments located within the roadway clear zone. Use Rigid Barrier Pier Protection details for interior bents from SCDOT Standard Drawings and abutment protection in accordance with the detail entitled “Rigid Barrier Adjacent to Retaining Wall” in Attachment B. See section titled “Concrete Median Barrier” in this Exhibit for additional pier protection requirements.

See the CSXT Public Projects Manual – Overhead Bridge Criteria for horizontal clearance requirements along railroad tracks.

2.1.7 Removal and Disposal of Existing Bridges

Remove and dispose of the existing bridges being replaced in accordance with the Standard Specifications for Highway Construction, Exhibit 8, CSXT Public Projects Manual, any other requirements of this contract, and all applicable laws and regulations.

2.1.8 Superstructures

For this project, Section 12.3.3 of the SCDOT Bridge Design Manual does not apply. Allowable superstructure types are outlined in Sections 12.3.2.1, 12.3.2.3, and 12.3.2.4 of the SCDOT Bridge Design Manual.

For prestressed concrete girder superstructures, use prestressed concrete girders that are “I” shaped. Design prestressed concrete girders so that the algebraic sum of the beam camber at prestress transfer due to prestress force, the beam dead

load deflections due to non-composite dead load, and superimposed dead load deflections due to applied superimposed dead loads results in a positive (upward) camber. Include the dead load from the future wearing surface in the determination of camber.

Do not include elastic gains into prestressed concrete girder design.

For steel welded plate girder superstructures, use structural steel girders that are “T” shaped. For steel welded plate girder and steel rolled beam superstructures, use structural steel that conforms to the requirements of AASHTO M 270 and paint the steel in accordance with Section 710 of the Standard Specifications. The use of uncoated weathering steel is not permitted.

At each support of prestressed concrete girders, steel welded plate girders, and steel rolled beam superstructures, connect all beams and girders to the substructure using anchor bolts. The only exception to this is for integral interior bent caps where bearings are not required and where these girders will be stabilized using other appropriate means.

Detail all construction stages for girder bridges to consist of a minimum of two lines of girders.

Bridge decks are to be continuous over the girders from side to side and end to end; “exposed” girders without deck between are not permitted.

Floorless culverts are classified as "Other Structure Types" (Section 12.3.3 of the SCDOT Bridge Design Manual) and are not permitted for this project.

2.1.9 Concrete Strengths

In prestressed concrete piles and beams, concrete design strengths are not allowed to exceed 8,000 and 10,000 psi maximum, respectively. Construct all cast-in-place concrete bridge components with Class 4000 concrete except as noted in Section 15.2.1 of the BDM. Construct all precast concrete bridge components with concrete having a minimum compressive strength of 5000 psi.

2.1.10 Final Finish of Exposed Concrete Surfaces

Apply final surface finish to the following designated bridge areas:

- Entire surface of all barrier rails, parapet walls, approach slab curbs, concrete utility supports, and wing walls; outside vertical edge of bridge deck slabs and sidewalks
- Outside face of exterior prestressed girders
- Entire surface of all substructure units, except top of bent caps and piers

Apply an Anti-Graffiti Coating to exposed concrete surfaces of bridge abutment walls, including precast panels and coping of MSE Walls. Apply an Anti-Graffiti Coating to exposed concrete surfaces of all retaining walls facing interstate traffic, excluding bifurcated median barrier walls.

Apply final surface finish and anti-graffiti coatings at rates specified by manufacturer.

2.1.11 Lightweight Concrete

Lightweight Concrete is only permitted in cast-in-place decks and barrier parapets. Use lightweight concrete that conforms to the requirements of the Sand Lightweight Concrete Special Provision in Exhibit 5. When calculating dead loads, include a minimum allowance of 7 pounds per cubic foot for reinforcing steel.

2.1.12 Post-Tensioning

Longitudinal, bonded post-tensioning will be permitted for bent caps only. External post-tensioning will not be permitted. Post-tensioning will not be permitted to be placed or extend above the top of any girder.

Design and detail post-tensioned bent caps in accordance with the requirements of the AASHTO LRFD Bridge Design Specifications, 8th edition. Design parameters including, but not limited to, anchor set, friction coefficient, and wobble coefficient shall be actual values provided by the post-tensioning supplier for the specific post-tensioning components to be used on the project. Evidence of this coordination shall be included in the design calculations.

The minimum center-to-center vertical spacing between ducts shall be the outer duct diameter plus 1.5 times the maximum aggregate size, or outer duct diameter plus 2 inches, whichever is greater. The minimum center-to-center horizontal spacing between ducts shall be the outer duct diameter plus 3 inches. Design and detail post-tensioned bent caps to meet or exceed these minimum requirements.

Engineer of Record (EOR) shall develop project-specific special provisions in accordance with supplemental design criteria in Attachment B. Special provision shall be submitted with the Final Bridge Submittal Package for bridges with post-tensioned caps. The final Special Provision shall be signed and sealed by the EOR for the bridge plans which the post-tensioning is to be used and provided with the RFC Plan Submittal.

2.1.13 Bridge Decks

For girder and beam spans, construct bridge decks with reinforced cast-in-place concrete.

Apply a transverse Grooved Surface Finish to all bridge deck riding surfaces (permanent and temporary lanes and shoulders) in accordance with Subsection 702.4.16 of the Standard Specifications for Highway Construction.

Make the connection of the reinforcing of decks between stages by lap-splice or mechanical splice.

Asphalt overlays are not permitted on bridge decks.

Areas of excess bridge deck beyond the barrier/railing wall or between curb line and railing wall shall be limited to the extent practicable. Where excess deck area is unavoidable and remains in the final condition, contiguous areas of excess deck larger than 1,000 square feet are to be enclosed by control access fencing such that areas are accessible only by use of security gates, with gate locations as required by SCDOT. Excess deck areas are to have curbed edges and other drainage provisions to prevent sheet flow off the edge of deck and facilitate collection of water for point discharge at permissible locations.

2.1.14 Stay-in-Place Bridge Deck Forms

The Contractor may use permanent stay-in-place bridge deck forms for concrete deck slabs between new beams and girders. Fabricate permanent stay-in-place bridge deck forms and supports from steel conforming to ASTM A 446/A 653, Grades 40 or 50, and having a coating class of G165 in accordance with ASTM A 525. Do not use fillers in the flutes of the stay-in-place forms. Fill form flutes with concrete as the deck slab is placed. Do not use permanent stay-in-place steel bridge deck forms in bays in which longitudinal deck construction joints are located and in bays between stages.

2.1.15 Barriers, Railing Walls, and Sidewalks

Provide bridge barrier in accordance with the SCDOT Bridge Design Memo DM 0119 and the SCDOT Bridge Drawings and Details for MASH Barrier. Provide two (2) conduits in each barrier as shown in the SCDOT Bridge Drawings and Details.

Detail barrier parapets parallel to the edge of the adjacent travel lane.

For bridges with a curb & gutter approach, provide sidewalk on the bridge. Detail the gutter line of the sidewalk parallel to the edge of adjacent travel lane and to align with the roadway curb and gutter. Railing walls which are located behind a curb/sidewalk are not required to be parallel with adjacent travel lane.

2.1.16 Highway Light Pole Supports

For light poles located on bridges, design and detail supporting structures as an extension of bridge deck, outside of the traffic barrier. Provide pull boxes for the two (2) 2" diameter conduits in the barrier/railing wall at each light pole and

facilitate wiring from each bridge corner. Provide additional conduits from the pull boxes through the deck extension to daylight at the base of the light pole. Use embedded or bolt-through anchor bolts for attaching the light post base plate. Adhesively bonded anchors are not an acceptable substitute for the embedded or bolt-through anchor bolts required.

2.1.17 Overhead Sign Attachment to Bridges

For overhead signs attached to bridges, design the bridge for the sign loads and state the loading assumptions on the bridge load rating summary form. Signs cannot decrease vertical clearance. No field welding to steel girders or field drilling to precast beams is allowed. Attachment to cast-in-place concrete elements shall be made with inserts or in accordance with SCDOT Bridge Memo DM0408 for Adhesively Bonded Anchors and Dowels. Attachment hardware shall be galvanized or stainless steel.

2.1.18 Bridge Drainage

Design and construct the bridge deck drainage and bridge end drainage to ensure that the minimum requirements of the SCDOT Bridge Design Manual are met.

BDM Subsection 18.2.2 does not apply to this project. Allowable water spread requirements of BDM Figure 18.2-1 shall dictate the minimum number of drainage inlets on the bridge in the final condition. Refer to Exhibit 4e for temporary drainage requirements and for requirements relating to bypass flow at superelevation rollover locations and bridge ends.

Provide deck drainage as required in general conformance with Drawing No. 700-05 and 700-05.01. Use a minimum drain diameter of six inches in diameter (or equivalent cross sectional area).

If a closed drainage system is required, the bridge drainage shall be designed in accordance with SCDOT requirements. Scuppers shall be connected to under deck collector pipes which outfall to protected slopes, riprap pads, or connect to adjacent roadway drainage facilities. Provide accessible cleanouts for collector pipes.

Downspouts and collector pipes shall be fiberglass and shall be colored (not painted) to match the finished bridge color (Federal Color Standard No. 26622). No drains or discharge pipes shall be allowed inside of structural elements other than the bridge deck. Collector pipes are not to extend below the bottom of the girders except for downspout locations.

At finger joint locations, detail drainage troughs with downspouts and collector pipes to capture all runoff into the joint. Expansion joint drainage shall not discharge freely out the side of the bridge deck.

If necessary, design grated inlets in a manner that allows integration into the bridge deck design and does not interfere with structural continuity. Surface grates and recessed collection chambers may be considered if structurally necessary and approved in advance by SCDOT. Size grated inlets as large as possible to allow for ease of maintenance. Design inlet grates for safe passage of bicycle traffic where applicable.

For bridge decks with future accommodations required by section 2.1.4, provide deck drains to satisfy the spread requirements based on the future conditions. For bridges crossing roadways with allowances for future conditions, locate drains so they do not discharge onto current or future roadway or shoulders. Bridge deck drains shall not be allowed to discharge directly into surface waters or CSX’s right-of-way.

2.1.19 Pile Sizes and Types

Minimum pile sizes and acceptable pile types are listed below. No other pile types are permitted. Where the geotechnical report indicates corrosion is a concern, use the entire perimeter of the steel section in contact with soil/water when determining sacrificial thicknesses for the design life of the member. The sacrificial thickness shall be removed from the pile section properties when determining capacity for all limit states, including seismic.

PILE TYPE	MINIMUM SIZE
Steel H-Piles	HP12x53
Steel Pipe Piles	16” Diam. (min. wall thickness equal to 1/2”)
Solid Prestressed Concrete Piles	18” Square
Prestressed Concrete Pile Points	W8x58

2.1.20 Steel Pipe Pile Connection Details

The pile connection detail described in Item 2 of Section 19.2.6.3 of the SCDOT Bridge Design Manual does not apply for this project. Terminate steel pipe piles at the bottom of the end bent cap and footing. Connect the piles to the cap and footing using a reinforced concrete infill, with the reinforcing extending into the cap or footing. The minimum clearance of the reinforcement shall satisfy the requirement of SCDOT Design Memorandum DM0107.

2.1.21 Drilled Shafts

SCDOT Bridge Design Memorandum DM0111 contains a requirement to detail the portion of shaft below the construction casing with a diameter that is six inches smaller than the diameter of the casing. This six-inch reduction requirement does not apply to this project. For this project, detail the portion of the shaft below the bottom of the construction casing, whether in soil or rock,

with a diameter that is at least two inches smaller than the outer diameter of the casing.

When the design for the upper portion of a drilled shaft requires a column reinforcement cage to be inserted into a larger diameter drilled shaft reinforcement cage, provide a construction joint in the shaft just below the bottom of the column cage. Prior to casting the upper portion of the shaft, remove all drilling fluids and unsound concrete and roughen the surface of the construction joint. Arrange for CSL testing to be performed prior to placement of the column reinforcement cage. Install the column reinforcement cage in the upper portion of the shaft prior to drilled shaft concrete placement in the splice region.

Drilled shafts that have a diameter of 6 feet or greater and a length of 5 feet or greater are considered to be mass concrete elements. See Exhibit 5 for specifications regarding concrete mix design, concrete placement, and temperature control of these large diameter drilled shafts.

For single drilled shafts which support straddle bent columns, increase the loadings for foundation design by 20%.

2.1.22 Crosshole Sonic Logging (CSL) Testing

Design and detail drilled shafts to include access tubes in all drilled shafts in accordance with the SCDOT Standard Specifications for Highway Construction, 2007 Edition. Acceptance of drilled shafts will be based on separate SCDOT-conducted CSL testing.

2.1.23 Substructures

Construct Interior Bents at roadway and/or railroad grade separation bridges and the Saluda River bridges using cast-in-place reinforced concrete bent caps and columns supported on cast-in-place reinforced concrete drilled shafts or pile footings. Deep foundations are required to extend below any compacted fill.

Set the tops of footings in accordance with Section 19.5.5 of the SCDOT Bridge Design Manual. In cases where there is pavement above the footing, locate the top of footing a minimum of two feet below the bottom of the base course.

If a drilled shaft is extended above ground, above the scour line, or through liquefiable soil, structurally design the shaft as a column and detail the longitudinal reinforcing steel with a maximum spacing of 8 inches center-to-center.

Construct end abutments as either vertical abutments or spill through abutments with a 2:1 maximum slope. Vertical abutments include the end bents supporting the bridge spans along with the associated wall structures retaining the embankment of the bridge approaches. Construct vertical abutments and vertical abutment wing walls using cast-in-place reinforced concrete or MSE walls.

Vertical abutment wing walls refer to the part of the wall structure extending beyond the end of the end bent cap retaining the embankment of the bridge approaches, not the bridge wings connected to the end bent cap. For bridges crossing a highway, construct the vertical abutment and vertical abutment wing walls parallel to the adjacent travel lane passing beneath the bridge unless otherwise approved in advance by SCDOT. For stream crossings, vertical abutment walls and vertical abutment wing walls are not allowed within the limits of the 500 year water level. For spill through abutments, set the elevation of the berm so that the top of the berm is no greater than 4 feet below the superstructure.

For integral end bents, set the elevation of the berm so that the top of the berm is no greater than four (4) feet below the bottom of superstructure.

Cast-in-place end bents/abutments with berms greater than four (4) feet below the bottom of superstructure are to be free-standing end bents or semi-integral end bents that allow for longitudinal translation of the superstructure relative to the end bent.

At MSE walls, use bridge ends consisting of cast-in-place reinforced concrete caps supported with piles or cast-in-place reinforced concrete drilled shafts that are set back behind the MSE wall faces as shown in SCDOT Geotechnical Drawings and Details.

The following applies to bent cap cantilevers for pile supported end bents and interior pile bents:

- For a cap supported by prestressed concrete piles, provide a minimum of the equivalent of 2 pile widths of distance from the centerline of the exterior pile to the end of the cap.
- Do not detail the intersection of the centerlines of bent and exterior beam/girder on the bent cap cantilever.
- Provide a distance from the centerline of exterior pile to the edge of a slab superstructure, measured along the bent cap centerline, that is less than or equal to 30 percent of the average pile spacing of the bent.

The following applies to multi-column interior bents, except for “Straddle Bents” as described in the next section:

- The column spacing shall not exceed 25 feet center to center of columns.
- Provide a cantilever distance from the center of exterior column to the end of the bent cap that is less than or equal to 35 percent of the average column spacing of the bent.

2.1.24 Straddle Bents

A straddle bent is an interior bent where vehicular or rail traffic crosses beneath the bent cap between two supports/columns of the same bent. Each individual

support/column for straddle bents shall be considered as a single column/pier wall in accordance with DM0213 with regard to protection, size, and collision loading. Do not detail columns or supports for straddle bents within 25 feet of an existing or identified future railroad track regardless of column geometry or presence of crashwall. Where straddle bents are utilized over vehicular or rail traffic, provide a minimum of one foot of additional vertical clearance above requirements outlined in the BDM.

2.1.25 Approach Slabs

Where bridge ends are located near intersections or ramp merge/diverge locations, adjust approach slab and/or barrier geometry as necessary to accommodate attachment and appropriate clearances for guardrail or other roadway components required for roadside safety.

For bridge ends near intersections where approach slabs extend into the crossing roadway, extend the approach slab length beyond the required 20 feet as necessary so that the joint at the end of the approach slab lines up with the edge of a lane.

No reduction of minimum approach slab length outlined in the BDM, SDS, or GDM is permitted.

2.1.26 Integral Bent Caps

If integral bent caps are used on this Project, construct the caps using cast-in-place concrete.

2.1.27 Slope Protection

Provide concrete slope protection for the end fills under new bridges over interstate routes, ramps, or other roadways. If a bridge has a vertical abutment wall, provide concrete slope protection in the area under the bridge between the wall and the paved shoulder. Also provide concrete slope protection in the area on top of the abutment wall extending from the paved ditch on top of the wall up to the end of the bridge wing wall. Detail concrete slope protection with a minimum thickness of 4 inches and in accordance with Drawing No. 804-01 of the Bridge Drawings and Details and in accordance with the requirements of Section 804 of the Standard Specifications for Highway Construction.

For bridges crossing streams and rivers, protect the end fills with riprap in accordance with Standard Drawing 804-105-00.

2.1.28 Bearing Assemblies

Pot bearings may be used where required due to large loads and/or geometric constraints. See Exhibit 5 for Special Provision.

Seismic Isolation Bearings will not be permitted.

2.1.29 Bridge Plans

As required by the SCDOT Bridge Design Manual, include in the bridge plans Reinforcing Steel Schedules and Quantities Tables for each bridge component (end bents, interior bents, spans, etc.). When these components are required to be constructed in stages, break the Reinforcing Steel Schedules and Quantities Tables down by stage. Immediately following the title sheet, provide a quantities sheet that includes a tabulation of estimated quantities and a summary of estimated quantities.

2.2 Retaining Walls

2.2.1 Mechanically Stabilized Earth (MSE) Walls

Design and construct MSE walls in conformance with Supplemental Technical Specification SC-M-713 and SCDOT Geotechnical Drawings and Details, Drawings No. 713-01 and 713-02. If MSE wall is adjacent to an underground drainage feature (drainage structure, pipe, culvert, etc) the leveling pads of the MSE wall must be located to facilitate future maintenance of the drainage feature. The leveling pad elevation and offset distance from the feature shall provide sufficient slope stability for open trench working condition during future maintenance operations.

For all MSE walls on this project, construct wall facing using precast concrete panels with a deep fractured fin finish in accordance with Standard Drawing 701-950-01.

Provide a minimum of 3 feet of clear distance between the fill face of the MSE wall facing and the piles or drilled shafts. For two staged walls (walls with both temporary and permanent faces), provide a minimum of 3 feet of clear distance between the fill face of stage 1 (temporary face) and the piles or drilled shafts.

Design wall heights and lengths to provide adequate cover for roadway and bridge drainage inlets and pipes in the roadway approaches. In addition, design wall heights and lengths to provide adequate slope transitions to maintain stable shoulders and slopes and design clearances and templates in accordance with the design criteria.

Do not use MSE wall structures that exceed heights of 40 feet.

2.2.2 Reinforced Concrete Walls

Provide a concrete paved drainage ditch along the top of the wall as shown on the SCDOT Geotechnical Drawings and Details. Size the drainage ditch as necessary to prevent water from overtopping the wall during the design storm.

Design cast-in-place concrete cantilever walls in accordance with SCDOT Geotechnical Design Manual.

All exposed wall face other than integral traffic barrier (or area concealed by independent traffic barrier) and a two foot strip along the top to mimic MSE wall coping shall have a deep fractured fin finish in accordance with Standard Drawing 701-950-01.

Spread footings are permitted for concrete retaining walls that are not directly supporting bridges. Step the retaining wall footings when there is a change in grade.

2.2.3 Other Wall Types

Other acceptable wall types include Precast Counterfort walls (which are permitted in conjunction with traditional MSE walls in partial rock cuts), Tangent Pile/Secant Pile walls, Anchored walls, Sheet Pile walls having reinforced concrete coping, Soldier Pile and Lagging walls, and Soil-Nailed walls. Wall types proposed outside of those listed herein shall require submission through the ATC process for approval.

Prior to commencing any designs of other wall types as specified herein, submit to SCDOT the wall type selected, design methodology, design criteria, and material and construction specifications for review. In the design criteria, include wall geometry and location, resistance factors, soil properties, and material properties of the wall. If the walls support bridge embankments, also submit conceptual bridge plans in accordance with Section 3.2 of the SCDOT Bridge Design Manual. Submit shop plans and any calculations for other wall types in accordance with Section 725 of the SCDOT 2007 Standard Specifications for Highway Construction.

Provide a concrete paved drainage ditch along the top of the wall if the retained soil slopes towards the back of the wall. Provide drainage inlets as necessary to prevent water from overtopping the wall during the design storm.

Wall face shall be concrete and all exposed faces other than integral traffic barrier (or area concealed by independent traffic barrier) and a two foot strip along the top to mimic MSE wall coping shall have a deep fractured fin finish in accordance with Standard Drawing 701-950-01.

2.2.4 Requirements for Horizontal Layout of Walls

Locate walls adjacent to ramp or interstate travel lanes to accommodate appropriate barrier treatment and allow for future additional lanes and horizontal clearance as described in Sections titled “Dimensions” and “Horizontal Clearances/Pier and Abutment Protection” in this Exhibit.

For fill walls, locate wall and/or proposed new right-of-way line to provide a minimum horizontal distance of 1.2 times the wall height between the fill face of the wall and the right-of-way line.

For cut walls, locate wall and/or proposed new right-of-way line to provide the lesser of 15 feet or 1.2 times the wall height between the exposed face of wall and the right-of-way line.

In addition to the wall location criteria above, locate walls and/or proposed new right-of-way line such that all retaining wall footings, MSE wall reinforcing, and wall anchorages are within right-of-way.

2.2.5 Barrier Treatment

See Exhibit 4a for conditions where barrier treatment on or adjacent to retaining walls is required.

See section entitled “Concrete Barriers” for design and detailing requirements.

2.2.6 Anti-Graffiti Coating

Apply an Anti-Graffiti Coating to exposed surfaces of retaining walls. Apply at rate specified by manufacturer.

2.2.7 Plans Preparation

See supplemental criteria in Attachment B titled “Non-bridge Structure Plan Preparation Requirements.”

2.3 **Concrete Barriers**

2.3.1 Concrete Median Barrier

Construct concrete median barrier according to SCDOT standard drawings. Design 56” minimum height Test Level 5 median barrier with exception that if there is an elevation difference between the two sides, the higher side can be 46” minimum or Test Level 4.

For slip-formed elements, utilize a concrete slip forming mix design that achieves 4000 psi minimum 28-day compressive strength verified by test cylinders with reinforcing and details shown in the Standard Drawings. For all other cast-in-place barriers in accordance with Standard Drawings, including bridge pier protection, utilize Class 4000 concrete with the reinforcing and details shown in the Standard Drawings. Expansion joints in slip formed barriers are only required at the interface with other structures such as Zone of Intrusion barriers or foundations for lights or signs. Use only saw cut contraction joints. Install contraction joints early enough to control shrinkage cracking and to minimize damage due to saw cutting.

Condition A – Concrete Median Barrier with grade separations of 18 inches or less: Use details from the SCDOT Standard Drawings.

Condition B – Concrete Median Barrier with grade separations between 18 inches and 36 inches require a complete design. Calculate and detail the minimum expansion joint spacing required for stability analysis to resist the overturning of the Test Level 4 impact force at the increased moment arm generated by the grade separation.

Condition C – Concrete Median Barrier with grade separations 36 inches and greater: In addition to the design requirements of Condition B, design the cantilever wall barrier in accordance with SCDOT Geotechnical Design Manual requirements at the Extreme Event I limit state.

For Conditions B and C, when evaluating the stability of the barrier, use a transverse force of 10 kips. For Conditions B and C, design and detail the barrier to provide a minimum height, measured from top of higher pavement surface to top of barrier, of 46 inches. Use a 10:1 taper to transition between Condition A barriers and Conditions B and C barriers.

2.3.2 Concrete Roadside Barrier

Where Concrete Roadside Barrier is required by Exhibit 4a, design the barrier/wall for a Test Level 4 impact and provide a Test Level 4 barrier with a traffic face that is a minimum of 46 inches in height, measured from top of pavement to top of traffic face, and that has a vertical or near-vertical face that matches the shape of the SCDOT MASH compliant bridge barrier, except for the difference in height from 42 inches to 46 inches. For interface with bridge barriers, transition the 4" height difference with a 6H:1V taper. These requirements apply to both sides of the wall.

For cast-in-place concrete gravity and semi-gravity retaining walls serving as roadside barriers, the analysis/design methodologies and conditions outlined for Conditions B and C in the section entitled "Concrete Median Barrier" shall apply.

Except for barriers incorporated into cast-in-place concrete gravity and semi-gravity retaining walls, barriers must be detailed independently of the adjacent wall or obstruction and must be supported by a moment slab. An exception to this is that at the low side of a wall only, the detail entitled "Rigid Barrier Adjacent to Retaining Wall" in Attachment B, may be used in lieu of the barrier supported by moment slab.

2.3.3 Barriers Supported by Moment Slabs

When required, provide barriers supported by moment slabs that are designed in accordance with the AASHTO LRFD Bridge Design Specifications. Where moment slabs are required along the top of MSE walls or other earth retaining structures, detail the moment slabs independently of wall components as shown

on Drawing No. 713-01d of the SCDOT Geotechnical Drawings and Details. Extend moment slab as necessary to avoid conflicts with buried wall termination detail and approaching guardrail posts.

Detail moment slabs adjacent to other obstacles/obstructions independently with the details of the moment slab and barrier complying with Drawing No. 713-01d of the SCDOT Geotechnical Drawings and Details.

Detail barriers and railings on moment slabs in accordance with section entitled “Barriers, Railing Walls, and Sidewalks.”

Do not detail concrete roadside barriers with moment slabs in locations where the moment slab would block maintenance access to roadside drainage structures.

3. BRIDGE LOAD RATING

Perform bridge load capacity ratings in accordance with the SCDOT Load Rating Guidance Document and the Manual for Bridge Evaluation, latest edition.

Request a new bridge Asset ID at Preliminary Plan submittal as directed in the Load Rating Guidance Document.

In the event the load rating indicates the bridge would require load posting (any LRFR load factors <1), redesign the bridge and update the load rating until the required capacity is achieved. No new bridge will be accepted by SCDOT which indicates the need for load posting.

Submit load rating documentation in accordance with Chapter 20 of the Load Rating Guidance Document for review with final bridge plans. Update the load rating and submit final load rating documentation and software files with the as-built plans. All load ratings shall be signed and sealed by a South Carolina registered professional engineer.

4. BRIDGE INSPECTION

In the event the designer determines the need to design a bridge that contains fracture critical or complex components as defined in the SCDOT Bridge Inspection Guidance Document (BIGD), develop and submit bridge specific inspection procedures meeting the requirements of the BIGD. A copy of the BIGD is included in Attachment B.

EXHIBIT 4c

PAVEMENT DESIGN CRITERIA

1. GENERAL

Exhibit 4c contains requirements for:

- Interstate Widening and Reconstruction Hot Mix Asphalt (HMA) Pavement
- Temporary Pavement
- HMA Pavement and Base for Non-Interstate Routes
- Rehabilitation of Non-Interstate Routes

2. CRITERIA

2.1 General Notes

Milled-in rumble strips shall be used on all shoulders, both inside and outside, in accordance with Engineering Directive 53, SCDOT Standard Drawings and specifications for the entire project.

Cross-slope verification in accordance with Exhibit 5 – Special Provision is required for interstate pavement.

It is the Contractor's responsibility to confirm suitability of soils for placing pavement layers directly on subgrade. Contractor to modify or remove and replace in situ soils as necessary. Contractor to include appropriate notes and details on the roadway typical section sheets for subgrade stabilization technique(s) which will be used on the project as necessary.

All Cement Modified Reclaimed Base (CMRB) shall be Method B curing. Perform CMRB using a minimum of 2 passes with the reclaimer. This can include a pulverization and a mixing pass or two passes with cement. Additional passes may be needed to meet the requirements of the specification. SCDOT may utilize coring at its discretion for dispute resolution of final acceptance for CMRB material. If testing during production fails or the quality of material is uncertain to the SCDOT, acceptance may be based upon extraction of an intact core. The thickness of the intact core shall equal or exceed the design thickness of the CMRB.

Eradication of temporary markings shall not be allowed on the final pavement surface. Prior to placing the final permanent pavement markings, all asphalt areas requiring revised pavement markings shall be milled and/or resurfaced with the required mixture type for interstate pavements or non-interstate pavements. Existing pavement markings on bridge decks shall be removed and replaced to match new lane configurations.

The Contractor shall select from the options given for interstate mainline, shoulders and ramps, system to system, system to service routes, and non-interstate routes for Ultimate

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

and Interim Design components. Pavement designs ATC's may be submitted for consideration. However, no reduction in structure shall be allowed.

2.1.1 Criteria in addition to SCDOT Pavement Design Guide and requirements for the ATC process are as follows:

- Acceptable pavement materials are given in the SCDOT Pavement Design Guide Coefficient of Relative Strength for Flexible Pavement Components, included in this exhibit, or are subject to approval in the ATC process. <http://www.scdot.org/business/pdf/materials-research/PavementDesignGuide2008.pdf>
- Design of pavements or pavement system components not covered in the SCDOT Pavement Design Guide are subject to approval through the ATC process. Provide specifications for materials or processes not covered in current SCDOT specifications.
- Indicate pavement thickness in rate (psy) for HMA courses and inches for all other material types on typical sections. Utilize 110 psy/in for HMA thickness
- Utilize 25 or 50 psy increments for HMA rates
- Follow Asphalt Mix Design Guidelines found on SCDOT website for type and rate. http://www.scdot.org/business/pdf/materials-research/Guidelines_Aspphalt_Mix_Selection.pdf
- Cold Central Plant Recycled (CCPR), see Exhibit 5, rate 3 – 5 inches per lift. This material may be utilized as a substitute for HMA base up to 5 inches in thickness for interstate and 9 inches on non-interstate. It must be covered with a minimum of 500 psy of dense graded HMA on the interstate and 150 psy of dense graded HMA on non-interstate routes. The structural coefficient is 0.34 per inch. Interstate traffic shall not be placed directly on CCPR material.
- Soil-Cement, Section 301 Cement Modified Subbase. The Contractor shall confirm suitability of soils for modification and provide mix design with a minimum strength, during production, of 300 psi for approval. Ensure the full width of the lane/pavement area is mixed.
- Contractor is responsible for mix design of lime modified subbase, include specifications for mix design and final acceptance. Identify criteria for design and method of acceptance.
- Contractor is responsible for mix design of Cement Modified Recycled Base (CMRB). CMRB layers shall not be less than 8 inches or more than 12 inches. CMRB shall be covered with no less than 175 psy of asphalt surface course. Synthetic CMRB may be created by mixing a minimum of 50% of the thickness with graded aggregate base course (GABC) or recycled asphalt pavement (RAP). The Contractor shall confirm suitability of materials for modification. The design strength shall be between 450 and 600 psi.

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

- Roller Compacted Concrete (RCC) layer thickness shall be from 8 to 10 inches in thickness.
- Limited information indicating existing pavement condition is included in the project information package.
- Pavement designs may be dependent upon Contractor's selection of alignments. If ATC's are submitted for alignment changes they shall include pavement design for approval.
- HMA pavement designs considered for ATC must indicate perpetual design theory or demonstrate equivalent bottom up fatigue life, mechanistically, as compared to the options included in the RFP.

2.2 General Notes – HMA

If the final elevation is built up, and a new surface course of HMA is to be placed, mill and remove OGFC at a minimum.

SC-M-403 is revised as follows for Stone Matrix Asphalt (SMA) placed directly on top of a variable lift/cross slope correction:

- A limit of 80 inches/mile will be set on the acceptance of the cross slope corrected surface
- This cross slope corrected surface will be tested by the Department in accordance with SC-T-125 or other method specified in the contract special provisions
- If the results of this test are less than 80 inches/mile, then that number will be used to set the percent improvement target in accordance with Table 6 of Supplemental Technical Specification SC-M-403 (04/16)
- If the results of this test are greater than 80 inches/mile, then corrective action will be required until it is no greater than 80 inches/mile, and that number will be used to set the percent improvement target in accordance with Table 6 of Supplemental Technical Specification SC-M-403 (04/16)
- The final SMA surface will be evaluated to determine any incentive or pay reduction as per Supplemental Technical Specification SC-M-403 (04/16) and the revisions noted here.

Utilize surface planing for any areas intended to carry traffic on the milled/planed surface. The test section and rideability requirements in Exhibit 5 SECTION 401: SURFACE PLANING OF ASPHALT PAVEMENT shall not be required where HMA Intermediate or multiple lifts of Surface are being placed as subsequent lifts.

Construction joints for pavement shall be placed at the center of the lane or at lane lines for Ultimate Design configuration. Avoid placing construction joints in wheel paths during temporary alignments and Interim Conditions.

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

Intermediate B Special may only be placed in a confined condition and is limited to a maximum lift thickness of 550 psy.

Shoulder pavement designs shall match adjacent new pavement. Do not vary pavement section transversely for new location pavement.

2.3 Interstate Widening, New Location and Reconstruction HMA Pavement

Construct a new HMA pavement with the following characteristics. Select from the options below or provide an alternative in the ATC process. This includes interstate to interstate connections. Use these pavement designs on ramps connecting interstate to interstate. Pavement design for service ramps shall be selected from the options given for the crossing route. For ramps where both system to system and system to service traffic is combined, construct the interstate to interstate pavement structure until beyond the gore nose of the service ramp, at which point the service ramp pavement design can be constructed to the crossing route.

Layer Type	Option 1i	Option 2i	Option 3i
SMA	200	200	200
Intermediate B	200	200	200
Intermediate A	300	300	300
Base A, Intermediate A or B	600 ¹	1125 ¹	1600
GABC		10	
CMRB	12		

Notes: 1 – If proposed, CCPR shall be placed above the CMRB layer for option 1i or above the GABC for option 2i.

2.4 Existing Interstate Reconstruction and Rehabilitation

2.4.1 I-26

Final condition shall not reduce the total existing asphalt thickness.

Existing Lanes and Shoulders

- Mill 3 inches and replace with 200 psy Surface Type A in the same operation. Do not allow traffic on the milled surface.
- Perform Cross-slope correction or buildup as necessary. Milling for cross slope correction shall not exceed 1 inch. Surface Type E for cross-slope correction is limited to 1.5 inches in thickness.
- Overlay with 200 psy SMA (9.5mm).

2.4.2 I-126

Final condition shall not reduce the total existing asphalt thickness.

Existing Lanes and Shoulder

- Retain existing pavement, allowable milling 1 inch. Do not allow traffic on the milled surface.
- Perform Cross-slope correction or buildup as necessary. Surface Type E for cross-slope correction is limited to 1.5 inches in thickness.
- Overlay with 200 psy SMA (9.5mm)

2.5 Temporary Pavement

2.5.1 General

Temporary pavement is pavement outside of the existing travel lanes that is utilized to carry traffic for a period of time during construction of the project. Temporary pavement may be removed after use or incorporated into the final pavement by adding additional paving material to meet the final pavement design criteria.

Existing mainline shoulders on I-26 and I-126 are inadequate to carry temporary mainline traffic. It is required to reconstruct the existing shoulders. If reconstructing or providing additional structure for use as temporary pavement it shall be for the entire shoulder width.

2.5.2 Design and Performance Requirements

The Contractor shall include their temporary pavement designs in the technical proposals including proposed uses and durations of use. All temporary pavement designs must be approved during the design process prior to use on the project. Temporary pavement designs are only to be used for pavements that will be removed upon completion of this phase of the project and will not be considered for Interim Design components.

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

Design of temporary pavement is required and is the responsibility of the Contractor. Any existing pavement information provided in the Project Information Package should not be relied on for design and is given for information only. The design method selected for temporary pavement may vary from the SCDOT pavement design guide if approved by ATC.

Temporary pavement must provide a satisfactory rideability to the public prior to opening to traffic and during construction. Satisfactory rideability is defined as any 0.1 mile segment having roughness not to exceed 170 inches per mile when tested in accordance with SC-T-125. In addition to rideability, rutting shall not exceed 1/4" when the wheel paths are measured with a 4 foot straightedge.

If temporary pavement is to be incorporated in the final pavement structure, the pavement materials properties shall be verified in accordance with the Standard Specifications regardless of the width of pavement being placed. Prior to incorporating into the final pavement structure, it must be free of cracks and distortion prior to overlay. If the pavement has visible wear or deterioration, then take remedial action to improve or repair the pavement to the Department's satisfaction prior to overlaying or incorporation as final structure.

2.6 New Alignment and Reconstruction of Non-Interstate Routes

If new alignment or reconstruction is required for non-interstate routes, select from the options provided below for each routes assigned pavement group. If a design is not provided for a particular roadway affected by the project, it is the responsibility of the Contractor to submit a proposed design for approval.

Road Number	Road Name	Pavement Group
US 378	Sunset Boulevard	D
S-40-1276 S-40-2891	Morninghill Drive	A
S-40-1919	Latonea Drive	A
S-40-1019	Lawand Drive	A
S-40-287	Arrowwood Road	B
L-4514	Colonial Life Blvd. W	A
S-40-2890	Gracern Road	B
S-40-1918	Janice Drive	A

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

Intermediate (type)	325 (A)	200 (B)	275 (A)
Base A		300	450
GABC			10
CCPR	9		
CMRB		12	

2.7 Rehabilitation of Non-Interstate Routes

Perform the required rehabilitation treatment within the project limits for each route given below. Rehabilitation design required for any routes not listed below is the responsibility of the Contractor. Submit designs for approval.

- Colonial Life Blvd. (S-40-2963) – Mill and replace surface with 200 psy Surface Type B. Full depth patch as necessary.
- Bush River Road (S-40-31) – Full depth patch as necessary. Mill 2 inches uniform. Mill 2 inches uniform and replace with 200 psy Intermediate B in the same operation. Place 200 psy Surface A matching existing elevation.
- Group A and B Roadways – Tie in with milled joint utilizing the design surface for that roadway.

2.8 Pavement Safety and Patching

If potholes appear in the pavement the Contractor shall take action to temporarily fill all potholes for safety. Once a pothole is identified by the IQM or SCDOT as a safety hazard

EXHIBIT 4c – PAVEMENT DESIGN CRITERIA

and notification is made to the Contractor, the potholes(s) must be temporarily filled within 24 hours. Liquidated damages of \$420 will be assessed for every hour that a pothole is not temporarily filled after the initial 24-hour period. Temporarily filling of potholes shall be considered incidental and is not subject to additional payment.

Include full depth asphalt patching in accordance with the Special Provision in Exhibit 5. Patch interstate and non-interstate routes as directed by the Independent Quality Manager (IQM) or SCDOT and/or as outlined below.

At least once per month, all temporarily filled pot holes and any other areas required by the IQM or SCDOT to be patched shall be full depth patched, varying in depth as necessary but shall be no less than four (4) inches.

Any full depth patching required on temporary pavements is not to be debited from the amount of patching included in the Contractor's bid or paid for separately as outlined in Exhibit 5.

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 1 – Traffic Analysis

1. GENERAL

1.1 Traffic Analysis Requirements

Revisions to the Modified Selected Alternative that alter intersection or interchange locations or types shall be addressed in a traffic analysis. Changes including, but not limited to, number of lanes, merge, diverge, lane utilization, lane configuration, traffic control types, and storage lengths shall be analyzed in a traffic report.

All traffic analysis methods will be required to analyze 2020 Opening-year Build scenario, Horizon-year (2040) Build scenario, Failure Date (if applicable), and construction staging/temporary scenarios matching proposed MOT plans for AM and PM peak hours.

The design shall be evaluated with the same operational performance measures of effectiveness (MOEs) as the Modified Selected Alternative provided in the Approved IMR and TransModeler File. Traffic analyses of any Contractor originated design changes shall be performed using the requirements and parameters outlined in the RFP. Traffic analyses shall be “equivalent or better” than the Modified Selected Alternative to the satisfaction of the Department. The area of influence along arterials shall include, at a minimum, one signalized intersection beyond the interchange limits in each direction.

MOEs include:

1.1.1 Freeway Operations Performance

- AM and PM Mainline/Merge/Diverge/Weave Densities and LOS
- AM and PM Mainline and Ramp Volumes
- AM and PM Ramp Queue Lengths
- AM and PM Mainline Speeds

1.1.2 Arterial Operations Performance

- Intersection/Approach/Movement Delays and LOS
- Intersection Queue Lengths

1.1.3 Network Performance

- AM and PM Vehicle Miles Traveled
- AM and PM Vehicle Hours Traveled
- AM and PM Total Completed Trips
- AM and PM Total Denied Entry
- AM and PM Interstate End to End Travel Times

The Department values a design that reduces crash frequencies and eliminates crash patterns as compared to existing conditions.

The Department values a design that preserves the effectiveness of I-20, I-26, and I-126 as viable through-routes for all vehicle types, including oversize/overweight vehicles.

The Department values optimized intersection spacing throughout the interchange area to reduce or eliminate queueing and weaving effects and improved operations. FHWA and the Department value a design that does not have significant adverse impact on the safety and operations of I-20, I-26, and I-126.

Designs shall not include ramp metering or traffic demand strategies.

2. CRITERIA

2.1 Traffic Study Methodology Requirements

All evaluations of proposed changes to the Modified Selected Alternative may be conducted utilizing Highway Capacity Manual (HCM) methodology outputs with Synchro/SimTraffic and TransModeler software. It is recommended to start with HCM methodologies and Synchro/SimTraffic to start the screening of alternatives and transition to TransModeler for more complex analyses. SCDOT may require TransModeler simulations/analyses for design changes if deemed necessary. For example SCDOT may accept a Synchro/SimTraffic analysis for a change at a signalized intersection at a frontage road; however will require a TransModeler simulation for a change requiring a revised Interchange Modification Report.

Models shall use TransModeler (version 4 and build 6275) referenced in the Approved Interchange Modification Report (IMR) for necessary interstate mainline, collector distributor, and interchange simulations.

The consultant shall use the provided TransModeler files generated for the IMR as the base models for the development of all proposed alternatives if necessary. The consultant shall only change the model in regard to changing geometry, intersection control type, lane configurations, volumes, and speed (should be justified in traffic analysis). The consultant shall not change any other settings or model parameters that would affect the capacity of the model including, but not limited to, driver types, capacity, headways, and gaps.

2.1.1 Intersection Analysis

Intersection analysis shall be conducted using Synchro 10 or equivalent software for unsignalized and signalized intersections. Analysis shall evaluate overall intersection LOS and LOS of individual movements with HCM Reports. SimTraffic shall be run a minimum of 10 times for each scenario to provide the 95th percentile queueing for each intersection. SimTraffic intervals shall be a minimum of 15 minute seeding or sufficient duration to saturate the model and recordings of 60 minutes. Roadways with traffic signals shall be treated as coordinated systems for the model runs. Synchro 10 default settings are provided in Attachment B.

The consultant shall only change the Synchro and SimTraffic settings in regard to changing geometry, intersection control type, lane configurations, volumes, and speed (should be justified in traffic analysis). The consultant shall not change any other settings or parameters that would affect the capacity of the model including, but not limited to, driver types, capacity, headways, and gaps. The HCM Reports generated from the Synchro files and the SimTraffic 95th Percentile Queueing shall be reported in the Traffic Analysis and IMR (if necessary).

2.1.2 Roundabout Analysis

Roundabouts shall be analyzed using SIDRA software.

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 2 – Work Zone Traffic Control

1. GENERAL

The CONTRACTOR shall execute the item of Traffic Control as required by the Standard Specifications, the Standard Drawings For Road Construction, the Special Provisions, all Supplemental Specifications, the SCDOT Procedures and Guidelines for Work Zone Traffic Control Design, the MUTCD, the Plans, and the Engineer. This is an amendment to the Standard Specifications to require the following:

2. CRITERIA

2.1 General Regulations

These special provisions shall have priority to the plans and comply with the requirements of the MUTCD and the standard specifications. Revisions to the traffic control plan through modifications of the special provisions and the plans shall require approval by the Department. Final acceptance of any revisions to the traffic control plan shall be pending upon review by the member of the Design-Build team representing the Director of Traffic Engineering through the Design-Review Process.

In accordance with the document, *Rule on Work Zone Safety and Mobility: Implementation, Maintenance, and Safety Guidelines*, this project has been classified as “SIGNIFICANT” and all components of the Transportation Management Plan prepared by the CONTRACTOR are required and shall be implemented.

Install and utilize changeable message signs in all lane closures installed on high volume high-speed multilane roadways. Use of changeable message signs in lane closures installed on low volume low speed multilane roadways is optional unless otherwise directed by the plans and the Engineer. Install and use a changeable message sign within a lane closure set-up as directed by the *Standard Drawings For Road Construction*. When a lane closure is not present for any time to exceed 24 hours, remove the changeable message sign from the roadway. Place the sign in a predetermined area on the project site, as approved by the Engineer, where the sign is not visible to passing motorists. Utilize preprogrammed messages in accordance with the *Standard Drawings For Road Construction* when using the changeable message sign as part of the traffic control set-up for lane closures. Only those messages pertinent to the requirements of the traffic control situation and the traffic conditions are permitted for display on a changeable message sign at all times. At no time will the messages displayed on a changeable message sign duplicate the legends on the permanent construction signs.

During operation of changeable message signs, place the changeable message sign on the shoulder of the roadway no closer than 6 feet between the sign and the near edge of the adjacent travel lane. When the sign location is within 30’ of the near edge of a travel lane open to traffic, supplement the sign location with no less than 5 portable plastic drums placed between the sign and the adjacent travel lane for delineation of the sign location. Install and maintain the drums no closer than 3 feet from the near edge of the adjacent travel lane. This requirement for delineation of the sign location shall apply during all times the sign location is within 30’ of the near edge of a travel lane open to

traffic, including times of operation and non-operation. Oversized cones are prohibited as a substitute for the portable plastic drums during this application.

All signs mounted on portable sign supports shall have a minimum mounting height of 5' from the bottom of the sign to the ground. All signs mounted on ground mounted u-channel posts or square steel tube posts shall have a minimum mounting height of 7' from the bottom of the sign to the grade elevation of the near edge of the adjacent travel lane or sidewalk when a sidewalk is present.

On multilane primary routes, avoid placement of signs on portable signs supports within paved median areas utilized for two-way left turns unless otherwise directed by the RCE.

Temporary "Exit" signs (M1025-00) shall be located within each temporary gore during lane closures on multilane roadways. Mount these signs a minimum of 7' from the pavement surface to the bottom of the sign in accordance with the requirements of the MUTCD.

When mounting signs on ground mounted u-section or square steel tube posts, utilize either a sign support / ground support post combination with an approved breakaway assembly or a single direct driven post for each individual sign support of a sign assembly installation. Do not combine a sign support / ground support post combination and a direct driven post on the same sign assembly installation that contains two or more sign supports. Regarding sign support / ground support post combination installations, ensure that post lengths, stub heights and breakaway assemblies comply with the manufacturer's requirements and specifications. Use approved breakaway assemblies found on the *Approved Products List For Traffic Control Devices in Work Zones*.

When covering signs with opaque materials, the Department prohibits attaching a covering material to the face of the sign with tape or a similar product or any method that will leave a residue on the retroreflective sheeting. Residue from tape or similar products, as well as many methods utilized to remove such residue, damages the effective reflectivity of the sign. Therefore, contact of tape or a similar product with the retroreflective sheeting will require replacement of the sign. Cost for replacement of a sign damaged by improper covering methods will be considered incidental to providing and maintaining the sign; no additional payment will be made.

Overlays are prohibited on all rigid construction signs. The legends and borders on all rigid construction signs shall be either reversed screened or direct applied.

Signs not illustrated on the typical traffic control standard drawings designated for permanent construction signs shall be considered temporary and shall be included in the lump sum price bid item for "Traffic Control" unless otherwise specified.

Install "Grooved Pavement" signs (W8-15-48) supplemented with the "Motorcycle" plaque (W8-15P-30) in advance of milled or surface planed pavement surfaces. On primary routes, install these signs no further than 500 feet in advance of the beginning of the pavement condition. On interstate routes, install these signs no less than 500 feet in advance of the beginning of the pavement condition. Install two sign assemblies at each

sign location, one on each side of the roadway, on multilane roadways when the pavement condition is present. Install these signs immediately upon creation of this pavement condition and maintain these signs until this pavement condition is eliminated.

Install “Steel Plate Ahead” signs (W8-24-48) in advance of an area of roadway where temporary steel plates are present. Install these signs no further than 300 feet in advance of locations where steel plates are present. On multilane roadways, comply with the same guidelines as applied to all other advance warning signs and install two sign assemblies at each sign location, one on each side of the roadway, when roadway conditions warrant. Install these signs immediately upon installation of a temporary steel plate and maintain the signs until the temporary steel plates are removed. Steel plates are not allowed on interstates without approval from the Resident Construction Engineer.

Install and maintain any necessary detour signing as specified by the typical traffic control standard drawings designated for detour signing, Part VI of the MUTCD, these Special Provisions, and the Engineer. The lump sum price bid item for “Traffic Control” includes payment for installation and maintenance of the detour signing.

The CONTRACTOR shall maintain the travel patterns as directed by the traffic control plans and shall execute construction schedules expeditiously. The CONTRACTOR shall provide the Resident Engineer with no less than a two-week prior notification of changes in traffic patterns.

During nighttime flagging operations, flaggers shall wear a safety vest and safety pants that comply with the requirements of ANSI / ISEA 107 standard performance for Class 3 risk exposure, latest revision, and a fluorescent hard hat. The safety vest and the safety pants shall be retroreflectorized and the color of the background material of the safety vest and safety pants shall be fluorescent orange-red or fluorescent yellow-green.

During nighttime flagging operations, the CONTRACTOR shall illuminate each flagger station with any combination of portable lights, standard electric lights, existing street lights, etc., that will provide a minimum illumination level of 108 Lx or 10 fc.

During nighttime flagging operations, supplement the array of advance warning signs with a changeable message sign for each approach. These changeable message signs are not required during daytime flagging operations. Install the changeable message signs 500’ in advance of the advance warning sign arrays. Messages should be “Flagger Ahead” and “Prepare To Stop”.

During surface planing and milling operations, grade elevation differences greater than 1 inch in areas with pavements composed of hot mixed asphalt (HMA) base courses, intermediate courses or surface courses and Portland cement concrete are PROHIBITED unless otherwise directed by the Department. However, during surface planing and milling operations for removal of Open-Graded Friction courses ONLY, a grade elevation difference of 1½ inches between adjacent travel lanes opened to traffic may exist unless otherwise directed by the Department.

During the paving operations, the length of roadway with an acceptable grade elevation difference less than or equal to 2" shall be restricted to 2 miles.

During the milling and surface planing operations, the length of roadway with an acceptable grade elevation difference less than or equal to 1" shall be restricted to 2 miles.

During construction on the ramps, the CONTRACTOR shall conduct flagging operations. The flagging operations shall either stop traffic or direct the traffic around the work area. Installation and operation of these flagging operations shall be according to these special provisions and the MUTCD.

Supplement and delineate the shoulder edges of travel lanes through work zones with traffic control devices to provide motorists with a clear and positive travel path. Utilize portable plastic drums unless otherwise directed by the Department. Vertical panels may be used where specified by the plans and directed by the RCE. The installation of traffic control devices are required in all areas where those areas immediately adjacent to a travel lane open to traffic have been altered in any manner by work activities, including but not limited to activities such as grading, milling, etc. Install the traffic control devices immediately upon initiating any alterations to the areas immediately adjacent to or within 15 feet of the near edge line of the adjacent travel lane. When sufficient space is available, place the traffic control devices no closer than 3 feet from the near edge of the traffic control device to the near edge line on the adjacent travel lane. When sufficient space is unavailable, place the traffic control device at the maximum distance from the near edge of the adjacent travel lane available.

2.2 Lane Closure Restrictions

The lane closure restrictions stated below are project specific, for all other restrictions, see supplemental specification, "Lane Closure Restriction", dated July 1, 2019.

The CONTRACTOR shall install all lane closures as directed by the Standard Specifications For Highway Construction (latest edition), the Standard Drawings For Road Construction, these special provisions, the MUTCD, and the Engineer. The CONTRACTOR shall close the travel lanes of interstate routes as directed by the typical traffic control standard drawings designated for lane closures on interstate routes and primary and secondary routes as directed by the typical traffic control drawings designated for primary and secondary routes.

2.2.1 Primary and Secondary Routes –

On primary and secondary routes, the Department prohibits lane closures during any time of the day that traffic volumes exceed 800 vehicles per hour per direction. The Department reserves the right to suspend a lane closure if any resulting traffic backups are deemed excessive by the Engineer. Maintain all lane closure restrictions as directed by the plans, these special provisions, and the Engineer.

On Bush River Road, the Department prohibits lane closures Monday through Friday from 7:00 am to 9:00 am and 4:00 pm to 6:00 pm.

2.2.2 Interstate Routes (Single and Dual Lane Closures) –

1. I-26 Milepost 101 to Milepost 108 (I-126 split)

On Interstate 26 and its ramps, the Department prohibits single and dual lane closures during the hours listed in the table below.

Hourly Lane Closure Prohibitions (Single)		Hourly Lane Closure Prohibitions (Dual)	
Eastbound	Westbound	Eastbound	Westbound
MON-THU: 6A-7P	MON-THU: 7A-8P	MON-TUE: 5A-9P	MON-WED: 6A-10P
		WED-THU: 5A-10P	THU: 6A-11P
FRI: 6A-8P	FRI: 7A-8P	FRI: 5A-11P	FRI: 5A-11P
SAT: 8A-7P	SAT: 8A-7P	SAT: 6A-11P	SAT: 7A-11P
SUN: 9A-7P	SUN: 10A-8P	SUN: 8A-10P	SUN: 8A-10P

2. I-26 Milepost 108 (I-126 split) to Milepost 116

On Interstate 26 and its ramps, the Department prohibits single and dual lane closures during the hours listed in the table below.

Hourly Lane Closure Prohibitions (Single)		Hourly Lane Closure Prohibitions (Dual)	
Eastbound	Westbound	Eastbound	Westbound
MON-THU: 6A-7P	MON-THU: 7A-7P	MON-THU: 5A-10P	MON-THU: 6A-10P
FRI: 6A-8P	FRI: 7A-8P	FRI: 5A-11P	FRI: 6A-11P
SAT: 9A-7P	SAT: 9A-7P	SAT: 6A-11P	SAT: 7A-10P
SUN: 10A-7P	SUN: 10A-7P	SUN: 8A-10P	SUN: 8A-10P

3. I-126 from I-26 to Colonial Life Blvd (3 Lane Section)

On Interstate 126 and its ramps, the Department prohibits single and dual lane closures during the hours listed in the table below from a lane closure break point at station 60+00 for the westbound direction and station 30+00 in the eastbound direction.

Hourly Lane Closure Prohibitions (Single)		Hourly Lane Closure Prohibitions (Dual)	
Eastbound	Westbound	Eastbound	Westbound
MON: 7A-10A; 12Noon-2P; 5P-6P	MON-THU: 12Noon-7P	MON: 6A-8P	MON-WED: 6A-10P
TUE-THU: 7A-3P; 5P-6P		TUE-THU: 6A-8P	THU: 7A-9P
FRI: 7A-2P; 4P-6P	FRI: 11A-7P	FRI: 6A-9P	FRI: 7A-9P
SAT: ---	SAT: ---	SAT: 9A-8P	SAT: 9A-8P
SUN: ---	SUN: ---	SUN: 9A-7P	SUN: 11A-8P

4. I-126 from Colonial Life Blvd to Elmwood Ave. (4 Lane Section)

On Interstate 126 and its ramps, the Department prohibits single and dual lane closures during the hours listed in the table below from a lane closure break point at station 60+00 for the westbound direction and station 30+00 in the eastbound direction.

Hourly Lane Closure Prohibitions (Single)		Hourly Lane Closure Prohibitions (Dual)	
Eastbound	Westbound	Eastbound	Westbound
MON-THU: 7A-9A	MON-THU: 4P-6P	MON-THU: 7A-6P	MON-THU: 12Noon-7P
FRI: 7A-9A	FRI: 3P-6P	FRI: 7A-6P	FRI: 11A-7P
SAT: ---	SAT: ---	SAT: ---	SAT: ---
SUN: ---	SUN: ---	SUN: ---	SUN: ---

All other routes with lane closure prohibitions for this project are listed on the SCDOT website under Doing Business with SCDOT in the Publications and Manuals section for Traffic Engineering.

These restrictions also apply to all road closures and pacing operations. The Department reserves the right to suspend a lane closure if any resulting traffic backups are deemed excessive by the Engineer. Maintain all lane closure restrictions as directed by the plans, these special provisions, and the Engineer.

Installation and maintenance of a lane closure is PROHIBITED when the CONTRACTOR is not actively engaged in work activities specific to the location of the lane closure unless otherwise specified and approved by the Engineer. The length of the lane closure shall not exceed the length of roadway anticipated to be subjected to the proposed work activities within the work shift time frame or the maximum lane closure

length specified unless otherwise approved by the Engineer. Also, the maximum lane closure length specified does not warrant installation of the specified lane closure length when the length of the lane closure necessary for conducting the work activity is less. The length and duration of each lane closure, within the specified parameters, shall require approval by the Engineer prior to installation. The length and duration of each lane closure may be reduced by the Engineer if the work zone impacts generated by a lane closure are deemed excessive or unnecessary.

The presence of temporary signs, portable sign supports, traffic control devices, trailer mounted equipment, truck mounted equipment, vehicles and vehicles with trailers relative to the installation or removal of a closure and personnel are prohibited within the 15 to 30 foot clear zone based upon the roadway speed limit during the prohibitive hours for lane closures specified by these special provisions.

On multilane primary and secondary routes, a reduced regulatory speed limit of 35 MPH shall be in effect during lane closures. Erect temporary regulatory “Speed Limit” signs (R2-1-48-35) and “Speed Reduction 35 MPH” signs (W3-5-48-35) on temporary supports according to the typical traffic control standard drawings. Cover the existing regulatory speed limit signs when reduced speed limits are in place. Immediately remove or cover the “Speed Limit” signs (R2-1-48-35) and the “Speed Reduction 35 MPH” signs (W3-5-48-35) upon the removal of the lane closures.

On interstate routes, a reduced regulatory speed limit of 45 MPH shall be in effect during lane closures. Erect temporary regulatory “Speed Limit” signs (R2-1-48-45) and “Speed Reduction 45 MPH” signs (W3-5-48-45) on temporary supports according to the typical traffic control standard drawings. Cover the existing regulatory speed limit signs when reduced speed limits are in place. Immediately remove or cover the “Speed Limit” signs (R2-1-48-45) and the “Speed Reduction 45 MPH” signs (W3-5-48-45) upon the removal of the lane closures.

On interstate routes, the presence of temporary signs, portable sign supports, traffic control devices, trailer mounted equipment, truck mounted equipment, vehicles and vehicles with trailers relative to the installation or removal of a closure and personnel are prohibited within 30 foot clear zone during the prohibitive hours for lane closures specified by these special provisions.

Truck mounted changeable message signs shall be required during all interstate lane closures. The CONTRACTOR shall provide, install, and maintain these signs in accordance with all requirements of the Standard Specifications for Highway Construction (latest edition) and the typical traffic control standard drawings designated for interstate lane closures.

The truck mounted changeable message signs are in addition to the requirements for trailer mounted changeable message signs. Truck mounted changeable message signs and trailer mounted changeable message signs are not interchangeable.

The CONTRACTOR shall discontinue and remove a lane closure when the work activities requiring the presence of the lane closure are completed or are discontinued or disrupted for any period of time to exceed 60 minutes unless the presence of unacceptable grade elevation differences greater than 1” in milled areas or greater than 2” in all other areas are present unless otherwise directed by the Engineer.

2.3 Shoulder Closure Restrictions

2.3.1 Primary and Secondary Routes –

On primary and secondary routes, the Department prohibits the CONTRACTOR from conducting work within 15’ of the near edge of the adjacent travel lane on an outside shoulder or a median area under a shoulder closure during any time of the day that traffic volumes exceed 800 vehicles per hour per direction. The routes and times are listed above in Section 2.2. The hourly restrictions for lane closures shall also apply to work activities conducted under a shoulder closure within 15’ of the near edge of an adjacent travel lane or a median area. The Department reserves the right to suspend work conducted under a shoulder closure if any traffic backups develop and are deemed excessive by the Engineer. Maintain all shoulder closure restrictions as directed by the plans, these special provisions, and the Engineer.

On primary and secondary roadways, the Department prohibits the CONTRACTOR from conducting work within 1’ or less of the near edge of an adjacent travel lane under a shoulder closure. All work that may require the presence of personnel, tools, equipment, materials, vehicles, etc., within 1’ of the near edge of an adjacent travel lane shall be conducted under a lane closure.

2.3.2 Interstate Routes -

On Interstates 26 and 126, the Department prohibits the CONTRACTOR from conducting work within 15’ of the near edge of the adjacent travel lane on the outside shoulders or the median areas of eastbound or westbound I-26 and 126 during the same lane closure restriction times listed above in Section 2.2.

The hourly restrictions for lane closures shall also apply to work activities conducted under a shoulder closure within 15’ of the near edge of an adjacent travel lane or a median area. The Department reserves the right to suspend work conducted under a shoulder closure if any traffic backups develop and are deemed excessive by the Engineer. Maintain all shoulder closure restrictions as directed by the plans, these special provisions, and the Engineer.

On interstate highways, the Department prohibits the CONTRACTOR from conducting work within the limits of a paved shoulder or within 10’ of the near edge of an adjacent travel lane under a shoulder closure. All work that may require the presence of personnel, tools, equipment, materials, vehicles, etc., within the limits of a paved shoulder or within 10’ of the near edge of an adjacent travel lane shall be conducted under a lane closure.

The CONTRACTOR shall install all shoulder closures as directed by the typical traffic control standard drawings designated for shoulder closures, and the Engineer. Substitution of the portable plastic drums with oversized cones during nighttime shoulder closures is PROHIBITED.

2.4 Mobile Operations

A mobile operation moves continuously at all times at speeds of 3 mph or greater without any stops. The minimal traffic flow impacts generated by these operations involve brief traffic flow speed reductions and travel path diversions. Conduct work operations that cannot be performed at speeds of 3 mph or greater under standard stationary lane closures.

The Department prohibits the CONTRACTOR from conducting mobile operations during the hours when lane closures are prohibited. The hourly restrictions for lane closures shall also apply to work activities conducted under mobile operations. The Department reserves the right to suspend work conducted under mobile operations if any traffic backups develop and are deemed excessive by the Engineer. Maintain all mobile operation restrictions as directed by the plans, these special provisions, and the Engineer.

The distance intervals between the vehicles, as indicated in the *Standard Drawings For Road Construction*, may require adjustments to compensate for sight distance obstructions created by hills and curves and any other conditions that may obstruct the sight distance between the vehicles. However, adjustments to the distance intervals between the vehicles should be maintained within the range of variable distance intervals indicated in the standard drawings unless otherwise directed by the Engineer.

Maintain two-way radio communication between all vehicles in the vehicle train operating in a mobile operation.

Supplement the work vehicles and the shadow vehicles with amber colored flashing dome lights. The vehicles may also be supplemented with advance warning arrow panels and truck mounted attenuators as directed in the *Standard Drawings For Road Construction* and the Standard Specifications.

The CONTRACTOR shall install, operate and maintain all advance warning arrow panels, truck mounted attenuators and truck mounted changeable message signs as required by these special provisions, the manufacturer's specifications, the *Standard Drawings For Road Construction*, the Standard Specifications, the plans and the Engineer.

2.5 Typical Traffic Control Standard Drawings

The typical traffic control standard drawings of the "Standard Drawings For Road Construction", although compliant with the MUTCD, shall take precedence over the MUTCD. The typical traffic control standard drawings of the "Standard Drawings For Road Construction" shall apply to all projects let to contract.

Install the permanent construction signs as shown on the typical traffic control standard drawings designated for permanent construction signing.

2.6 Staging

Traffic Control Restrictions (Project Specific General)

Maintain the existing number of I-26 and I-126 mainline lanes of traffic in each direction during the times of the lane closure restrictions. Maintain the existing number of travel lanes for all on-ramps and off-ramps during the times of the lane closure restrictions unless otherwise approved by the Department. All ramps must remain open to traffic and maintain free-flow operation (no yield control) unless otherwise approved by the Department.

All routes shall remain open to traffic including no restriction/reduction in movements. No closure or restriction in movement or detour is allowed unless otherwise approved by the Department.

The presence of acceptable grade elevation differences less or equal to 1” in milled areas or less than or equal to 2” in paved areas adjacent to a travel lane open to traffic are prohibited during weekends from 8:00 am Friday to 9:00 pm Sunday unless otherwise directed by the Engineer. When necessary, the weekend restriction may be extended due to the proximity of a holiday as directed by the Engineer.

The existing lane widths for all loop ramps shall be maintained during construction. Other ramps should maintain their existing lane widths if possible; however can be reduced to 12 feet as a result of constructability or staging concerns. Sufficient lane width shall be provided for the appropriate design vehicle during construction.

The CONTRACTOR shall have no more than 72 hours to begin elimination of any grade elevation differences between or adjacent to the travel lanes of I-26 and I-126. The 72 hour time period shall begin upon creation of the grade elevation difference. This restriction shall apply to all acceptable grade elevation differences less than or equal to 1” in milled areas or less than or equal to 2” in paved areas.

During surface planing and milling operations, the length of roadway with a milled surface open to traffic is restricted to 6 miles. This restriction does not apply to concrete diamond grinding operations.

During surface planing and milling operations, the length of roadway with an acceptable grade elevation difference less than or equal to 1” adjacent to a single travel lane or between multiple travel lanes open to traffic is restricted to a maximum distance of 6 miles.

During asphalt paving operations, the length of roadway with an acceptable grade elevation difference less than or equal to 2" adjacent to a single travel lane or between multiple travel lanes open to traffic is restricted to a maximum distance of 6 miles.

The CONTRACTOR may conduct various work activities in the same direction at various locations concurrently if approved by the Department. Various work activities in the same direction requiring simultaneous closures in the same travel lane or shoulder shall be separated by no less than 2 miles from the end of the first closure that a motorist will encounter to the beginning of the taper of the second closure. Also, various work activities in the same direction requiring simultaneous right and left lane closures or shoulder closures shall be separated by no less than 4 miles from the end of the first closure that a motorist will encounter to the beginning of the taper of the second closure.

The contractor will be required to obtain approval from the Construction Manager for Mega Projects prior to blasting. The MUTCD shall be the basis for the traffic control requirements and SCDOT will work with the contractor to determine the appropriate traffic control measures required to perform blasting operations in a safe and effective manner at specific locations.

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 3 – Pavement Markings

1. GENERAL

1.1 Permanent Pavement Markings

Pavement marking work on this project consists of preparing detailed pavement marking plans and applying appropriate markings for the entire length of the project. All mainline, CD route, ramp edge lines, and lane lines shall be to interstate standards as detailed in the Standard Drawings. Interstate lane lines and edge lines shall be 6 inches in width. Exit and entrance gore markings, as well as mainline lane drop markings, shall be 12 inches in width. All other crossing route/service road lane lines and edge lines shall be 4 inches in width with the exception of 8 inch channelization/crosswalk markings. The final roadway surface material will determine which type of permanent marking material is to be applied. The CONTRACTOR shall use either polyurea or preformed tape (T-1) markings on concrete surfaces for the applications noted below. Thermoplastic markings shall be used on all asphalt surfaces. The CONTRACTOR shall install surface mounted raised pavement markers in accordance with the Standard Drawings.

2. CRITERIA

2.1 Permanent Pavement Markings

2.1.1 Thermoplastic Pavement Markings (Asphalt Surfaces)

All thermoplastic markings installed on the interstate mainline or any crossing routes shall meet the requirement of Section 627 of the Standard Specifications.

2.1.2 Polyurea Pavement Markings (Concrete Surfaces)

All polyurea markings installed on the interstate mainline, crossing routes or any bridge decks on this project shall be a liquid, multi-component system that includes highly reflective elements as recommended by the manufacturer of the polyurea binder. The CONTRACTOR may use 3M Stamark Liquid Pavement Marking Series 5000, Epoplex Glomarc 90, or an SCDOT approved equivalent.

The polyurea pavement marking lines shall have a minimum dry thickness of 20 mils when placed on concrete and asphalt pavements. The pavement marking material and highly reflective elements shall be applied in a simultaneous operation.

The CONTRACTOR shall apply the polyurea resin, mixed at the proper ratio according to the manufacturer's recommendations, to the pavement surfaces within the proper application temperatures as determined by the material manufacturer. Highly reflective elements shall be injected into the molten (liquid) polyurea pavement markings in accordance with the manufacturer's recommendations using a dispenser approved by the manufacturers of both the polyurea materials and the highly reflective elements.

Upon curing, the markings shall be uniformly reflectorized and have the ability to resist deformation caused by traffic throughout the entire length of the line.

If requested by the Engineer, the manufacturer of the selected polyurea material shall provide a technical representative, or a manufacturer's certified representative, to assure proper application technique by the CONTRACTOR during the initial installation of the product.

All materials will be accepted based on manufacturer's certifications.

Do not use polyurea pavement markings for Interim condition pavement markings on bridge decks. Use preformed tape in accordance with 2.1.3.

2.1.3 Preformed Patterned Tape (T-1) Pavement Markings (Options for Concrete Bridge Decks)

The CONTRACTOR may choose to apply preformed patterned tape markings to concrete bridge decks on this project. If this option is selected the markings shall be preformed patterned tape with a raised diamond pattern covered with ceramic elements having a refractive index of 1.9 or greater. All preformed tape markings installed on the bridge decks on this project shall be installed with a truck mounted application system or other motorized applicator approved by the manufacturer.

The CONTRACTOR shall provide to the Department the manufacturer's normal warranty which shall guarantee the tape materials for a period of 72 months from the date of installation from failure to retain the minimum reflectance values provided by the manufacturer and from failure due to loss of material adhesion or complete wear through. If failure occurs, the manufacturer will provide the replacement materials to restore the markings to their original effectiveness.

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 4 – Signing

1. GENERAL

1.1 Permanent Signing

Signing work on this project consists of preparing a detailed, comprehensive signing plan for Phase 1 of the CCR Program that is consistent and compatible with the plan for the entire I-20, I-26 and I-126 interstate corridor; and fabricating, furnishing, and erecting new ground mounted and overhead mounted signs, breakaway posts, overhead sign structures, sign lighting, and delineators. Also included is the removal and relocation of the signs, delineators, overhead structures and supports to be replaced or that are impacted. Impacts to signing include relocating, removing, or causing to be non-compliant. All existing signs, delineators, sign structures and supports shall be removed and replaced, with the exceptions of the signs called out by the notes in the Conceptual Signing Plans. Conceptual Signing Plans for Phase 1, which detail locations for all extruded panel signs to be mounted on I-beams or overhead structures, are provided in Attachment B. All signs and supports shall be replaced except for LOGO signs which should typically be retained and relocated. LOGO signs, unless damaged, shall be relocated to new supports upon coordination with SCDOT.

2. CRITERIA

2.1 Permanent Signing

2.1.1 Maintenance of Mainline and Ramp Directional and Information (LOGO) Signing Mounted on I-Beam Breakaway Posts

The existing mainline and ramp directional and information signs mounted on I-beam breakaway posts may have to be relocated due to the construction. Where relocation is necessary, the mainline signs should be mounted temporarily on 4"x6" wood posts using the method detailed on Standard Drawing 652-120-00. Ramp information signs (logo) should be mounted temporarily on 4"x4" wood posts. No separate payment will be made for these relocations. All signs are to be maintained throughout construction.

In addition, the CONTRACTOR will be responsible for replacing signs damaged during construction which are to be retained (i.e. logo signs) and erected as part of the permanent signing. A Department representative should conduct an inspection/evaluation prior to and at the conclusion of construction to determine if any damage occurred during execution of the contract. The CONTRACTOR shall be responsible for replacing damaged signs discovered by the Department.

2.1.2 Bridge Clearance and Crossing Route Information Signing

The CONTRACTOR will be required to erect bridge vertical clearance and crossing route number flat sheet signs on the new and existing bridges in both directions of travel. The signs shall be fabricated in accordance with the

SCDOT sign numbers shown in the table below. The CONTRACTOR shall determine the actual minimum vertical clearance in each direction after all interstate mainline or crossing route surfacing is completed.

SCDOT Sign Number	Sign Description	Crossing Route Type
W12-2P-78	Vertical Clearance	All
OHB M1-1-48	Crossing Route Information	Interstate – 2 or 3 digit
OHB M1-4-48	Crossing Route Information	US Route – 2 digit
OHB M1-4-60	Crossing Route Information	US Route – 3 digit
OHB M1-5-48	Crossing Route Information	SC Route – 2 digit
OHB M1-5-60	Crossing Route Information	SC Route – 3 digit
OHB M1-6-78	Crossing Route Information	Secondary Route – 2 digit
OHB M1-6-84	Crossing Route Information	Secondary Route – 3 digit

Detailed layouts for the signs in table are available from SCDOT – Director of Traffic Engineering, (803) 737-1462. Written requests for detailed layouts shall be addressed to the POC.

The vertical clearance sign shall be centered over the centerline of the interstate or crossing route travel way. The crossing route number sign shall be placed to the left of the vertical clearance sign with a minimum spacing of 8 feet between the right of the route number sign and the left of the clearance sign.

The flat sheet panels may be mounted on the outside beam on each side of the bridge using 3-M Very High Bond Tape in accordance with the tape manufacturer’s recommendations, or other method, such as direct bolting, as approved by the Engineer.

2.2 Overhead Sign Lighting

2.2.1 Overhead sign lighting will also be included on all overhead signs on this project. The CONTRACTOR will be responsible for:

- Designing and installing the complete electrical and sign lighting systems.
- Coordinate with the sign light manufacturer to produce a photometric analyses for the overhead assembly of signs in order to determine the number of sign lights required as well as the appropriate spacing. Photometric analyses will only be required for new structures that will remain in place as part of the Ultimate Design. For existing structures that will be removed as part of the Ultimate Design, modifications to the existing sign lighting systems will not be required even if signs are being modified or replaced as part of this Project.
- Include sign light spacing information as part of the signing plans on the overhead sign dimensional drawings as well as photometric analyses to support the spacing.
- Coordinating power supply with local utilities to provide connection from the nearest power supply lines to the lighting system which shall include all necessary conduit, power poles, conductors, etc., for connection to the meter base and from the meter base to the lighting system service panel.
- Submitting as-built electrical plans that show locations of power supply and conduit location. A schematic of the lighting control equipment and cabinet shall also be provided.

2.2.2 All work involving overhead sign lighting will be in accordance with the Department’s Supplemental Specification entitled Sign Lighting Systems dated September 25, 1998 located in Attachment B of which Section 4 entitled “Materials - Sign Lighting Luminaires” is revised as follows:

- LED sign lighting luminaires will be required on the project. The CONTRACTOR will be required to consult with fixture manufacturer to determine the number and appropriate wattage of fixtures (lumen output) that are necessary to properly illuminate the overhead signs. Sign luminaires shall be Holophane model SVLED2SVLPK1XX50KPLMGYSDP (6000 lumens) or SVLED2SVLPK2XX50KPLMGYSDP (9000 lumens – for larger/taller signs), or approved equal. “XX” in the model number represents the voltage type. Any fixtures other than those specified should be approved by the Director of Traffic Engineering prior to submitting project proposals.

Walkways shall be included in the design of all new overhead structures as noted in the Standard Specifications. Unistrut channels shall be installed on the walkway supports to support the new LED sign lights and shall be spaced to accommodate the hole pattern on the base of the fixtures cast aluminum housing. Placement (distance from the sign face) of the unistruts will be verified by the CONTRACTOR by contacting the lighting fixture manufacturer.

The CONTRACTOR will be required to install sign lighting systems on any existing sign structures on the interstate mainline that fall within the project limits which are scheduled to be retained and currently do not have sign lighting systems. Unistruts shall be added to the existing structure walkways to allow for proper mounting of the sign lighting systems.

Photometric analyses of all sign assemblies shall be submitted to the Engineer for review and approval.

2.3 Sign Damage

In the event an existing overhead structure is hit and damaged, the CONTRACTOR will be required to mobilize immediately and provide a professional evaluation and assessment of the structure damage. An engineering firm that specializes or has experience in this type of structural inspection and evaluation shall conduct a detailed on-site evaluation of the structure. If the major structural components or foundations exhibit obvious and significant/critical damage, the sign structure should be removed immediately. The damaged structure shall be placed at a location either protected by guardrail or beyond the clear zone as approved by SCDOT.

If the structure appears to be structurally sound and the damage appears to be limited to the sign hangers and/or walkway and lighting systems, the CONTRACTOR shall conduct a structural evaluation and provide the results of the evaluation within 24 hours of notification which should include verification that the structure is sound and can remain in service or if it should be removed as soon as possible. The results shall be stamped by a professional engineer registered in the state of South Carolina

If the inspector determines that the structure can remain in service, the evaluation should include recommendations of components that need to be replaced. The CONTRACTOR will be responsible to pursuing all repairs within an agreed upon schedule with SCDOT. The CONTRACTOR shall also provide all traffic control necessary for the proper inspection of the structure and any necessary repairs.

2.4 Special Instructions to the CONTRACTOR

A conceptual signing plan for Phase 1 is included in Attachment B of the RFP which shows the proposed sign locations and sign layouts for overhead signs as well as signs mounted on I-beam breakaway posts along the interstate mainline, CD roads, and crossing routes. To aid in estimating the costs of signing work, notes are provided on the conceptual plan for each sign location that details the sign size, sign identification numbers and a brief description of work to be accomplished. The conceptual plan does not show the location of flat sheet signs (intermediate reference location signs (mile markers), warning signs, regulatory signs, etc.) along the interstate mainline. These signs shall be included in the CONTRACTOR's Comprehensive Signing Plan and replaced as part of this contract. The conceptual plan does not include flat sheet signs for the interchange ramps and crossing routes. These signs shall also be included in the comprehensive signing plan.

Vertical clearances for existing sign structures shall be field verified and modifications made as necessary to provide appropriate vertical clearance.

There shall be a minimum 1 foot separation incorporated into the design of sign assemblies on all overhead signs.

The conceptual signing plan also notes where overhead sign structures constructed in Phase 1 may be required to carry a different sign as a result of a future phase of the CCR Program. Where the overhead sign structure is required to carry larger signs in the future, design the overhead structure to carry loads associated with sign(s) which are 35% larger sign area than the future signs shown in the conceptual signing plan.

The I-26 directional signs on Colonial Life Blvd and Bush River Road shall utilize D1-2/D1-3 and trailblazers signs similar to the existing signs. The destination signs shall use 8”D Copy. If interstate shields are incorporated into the design, they shall be 24’ size.

The CONTRACTOR shall contact the Director of Traffic Engineering within 30 days of the issuance of the Notice to Proceed to review the conceptual signing plan and the overall signing requirements of the contract. A complete as built set of signing plans should be submitted to the Director of Traffic Engineering at the conclusion of the project. The Director of Traffic Engineering will provide an example set of interstate signing plans to the CONTRACTOR at this meeting to use as a guide in preparation of the as built signing plans.

The signs shall be designed using SignCAD software using E Modified Fonts.

Walkways shall be included in the design of all new overhead structures as noted in the Standard Specifications.

Guard rail shall be included for all overhead uprights located within the clear zone on either side of the travel way. For guardrail installations that protect sign uprights, typically the face of the guardrail is located approximately 1 foot behind the edge of shoulder. The center of the upright should be located approximately 9 feet behind the face of guardrail.

The CONTRACTOR will be responsible for obtaining soil borings to be used for foundation designs for all new overhead sign structures.

The CONTRACTOR is advised that all signs have a unique barcode sticker attached to the back of each sign and each sign assembly has a unique barcode sticker attached to one post of the assembly. The CONTRACTOR will be required to record the barcode number for each sign and the associated assembly that is removed, replaced or relocated. These numbers and the date that the sign and assembly were removed, replaced or relocated shall be recorded on the Sign Barcode form. The form is included in the project information package. This form shall be turned in to the Resident Construction Engineer. SCDOT will place the new barcodes on signs.

Intermediate Reference Location Signs (Mile Markers) shall be installed on new and existing median barrier wall at two tenths (0.2) of a mile interval on I-26 from Station 0+00 to Station 470+00. The signs are to be installed in both directions back to back. Intermediate Reference Location Signs are not needed along I-126.

Intermediate Reference Location Signs will be mounted to the median barrier wall using Indexable Concrete Barrier Mount (ICBM) manufactured by Xcessories Squared or an approved equal on 2" 12-gauge square tube posts. Mounting bolts shall be expansion or resin anchors specified by the manufacturer.

All I-beam posts for LOGO signs will be designed to support full size LOGO panels. Full size mainline panels are 15' X 10' and full-size ramp panels are 8.5' X 6.5'. New LOGO signing shall be located along on the outside shoulder areas. If LOGO signs mounted on I-beam posts cannot be accommodated along the outside shoulder, coordinate with SCDOT regarding permanent removal of LOGO signs. Include in the Conceptual Signing Plans any existing LOGO signs which cannot be accommodated or become obsolete based on the proposed design.

Install flexible delineators on both sides of the concrete median barrier wall at a spacing of two hundred feet (200'). The mounting height of the delineators is thirty-four inches (34"). See SCDOT Standard Drawing 656-110-00 for detail of delineator and mounting method.

Temporary signing overlays will be allowed on guide signs as long as the messages and/or arrangement of arrows provide motorists proper direction. The overlays should be of the proper font and copy size if possible and should be constructed on flat sheet aluminum panels that will be fastened to the existing extruded panel signs.

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 5 - Traffic Signals

1. GENERAL

The CONTRACTOR shall repair and maintain all signal related equipment during the construction of this project. During construction, it is anticipated that there will be impacts associated to the detection at the existing traffic signals listed below. The project shall provide video detection cameras for each approach at each existing intersection listed below to maintain detection for the duration of the project. In addition, once the construction impacting the detection at the existing traffic signals is completed, the damaged inductive loops shall be replaced in accordance with the latest SCDOT design standards.

The CONTRACTOR is responsible for all interim traffic signal designs and operations due to revisions to intersection geometry, revisions to traffic patterns, lane closures or other construction activities. For major deviations from the existing signal geometry or operations (revisions to intersection laneage or phasing) temporary traffic signal plans shall be submitted for review and approval.

The CONTRACTOR shall be responsible for the efficient operations of all traffic signals throughout the duration of the project. Revised signal system timings shall be provided and implemented during major construction phases to accommodate traffic during revisions to intersection geometry, revisions to traffic patterns, lane closures or other construction activities.

In addition to maintaining the detection, any work at the ramps that impact the traffic signal, such as damage to fiber interconnect or any other signal appurtenances, shall be immediately repaired/replaced to SCDOT standards. Coordination with the District 1 Signal Staff should occur to ensure the work will avoid damaging traffic signal utilities as much as is feasible.

The existing signalized intersections are shown in the list below. **Maintain detection at ALL times at these intersections.**

- Bush River Road @ Zimalcrest Drive
- Bush River Road @ I-26 EB Off-Ramp/Driveway*
- Bush River Road @ Morninghill Drive*
- Bush River Road @ Arrowwood
- Bush River Road @ Colonial Life Blvd.

* Adjustments to signal location and timing, and/or removal of existing ramp signals, will be required after closure of the I-26 ramps to/from I-26.

The CONTRACTOR shall provide signal warrant analyses justifying the removal of any signals. The analyses shall be submitted to SCDOT for review with the Conceptual Traffic Signal and Communications Plans Deliverable.

Provide new traffic signals at the following intersection locations with all new appurtenances. The traffic signals shall be completely installed, inspected, tested and fully operational prior to opening the new roadways/intersections controlled by the signals to traffic. The new signal installations are:

- Colonial Life Blvd. @ I-126 WB Ramps
- Colonial Life Blvd. @ I-126 EB Ramps

All new permanent signals shall incorporate steel strain poles, span wire in standard box configuration, inductive loops, and ground-mounted cabinet and controller. Flashing yellow arrow heads shall be incorporated into the signal designs when permissive or protected-permissive phasing is warranted. The loops shall be installed in the binder course for all projects in Engineering District One. At locations where pedestrian signals are warranted, countdown pedestrian signal heads shall be utilized. At traffic signal locations without pedestrian signals or where no sidewalks are present, where a field study indicates a need based on evidence of regular pedestrian use, such as visible walking paths, a minimum pedestrian treatment of push button assembly with sign R10-4a (pay item 6865790) shall be utilized to ensure call and adequate minimum green time for pedestrians crossing over the main route.

Temporary signals shall utilize wooden poles or steel strain poles.

Traffic signal design plans shall be prepared at a scale of 1"=40' using SCDOT's standard traffic signal plan border and cell libraries. The signal plans will include placement of signal equipment, such as signal poles and pedestals, span wire; controllers and cabinets; vehicular and pedestrian signal heads; vehicle detection; pullboxes/splice boxes and conduits; signs; pedestrian features, such as pushbuttons, ramps, and crosswalks, and other information required for the signal design. The plans shall include Signal Equipment, NEMA Phasing, Phase in Operation, Signal Timings and Loop Detector Installation Charts and Tables.

Traffic signal clearance distance diagrams and clearance timing calculations shall be submitted for each intersection for temporary and final signal installations.

Traffic signal interconnect plans shall be prepared depicting the location and placement of overhead and/or underground communication equipment at and between each intersection. The interconnect plans will include the controllers and cabinets; fiber optic cable, conduit and splice boxes/pullboxes; and signal and utility poles used to mount communication equipment.

All traffic signals within the project limits along the existing Bush River Road signal system (between Zimalcrest Drive and Colonial Life Boulevard) and the proposed Colonial Life Boulevard signal system (between I-126 Eastbound and I-126 Westbound Ramps) shall be coordinated (see Section 2.5). Conduit with fiber-optic interconnect shall be installed between signals along the existing Bush River Road and proposed Colonial Life Boulevard system.

Current coordination plans for the existing Bush River Road system include AM Peak (Weekdays 7 – 9 AM), PM Peak (Weekdays 4 – 7 PM), and Off- Peak Plans (Weekdays 9 AM – 4 PM; 7 – 10 PM, and Weekend 8 AM – 10 PM). The proposed Colonial Life Boulevard system is anticipated to have, at a minimum, AM Peak, PM Peak, and Off-Peak timing plans.

2. CRITERIA

2.1 Traffic Signal Design Policies

All work under this Contract shall be performed under: the South Carolina Department Of Transportation, *Standard Specifications For Highway Construction*, latest edition; the SCDOT *Traffic Signals Technical Supplemental Specifications*; the SCDOT *Traffic Signal Standard Drawings*; these SCDOT *Traffic Signal Special Provisions*; the *Manual On Uniform Traffic Control Devices For Streets And Highways*, latest revision; the SCDOT *Traffic Signal Design Guidelines*, latest edition and as amended below; and the Plans.

The 2009 Edition of the SCDOT *Traffic Signal Design Guidelines* are amended as follows: Loop detector design shall utilize the (attached “Interim SCDOT Loop Design – March 2018”) in all permanent traffic signals in this project.

2.2 Equipment

2.2.1 SCDOT Supplied Equipment

The Department will furnish signal communications equipment as described in the attached “SCDOT IT Services PIF - Signals”. Any equipment provided by the SCDOT IT Services group shall be paid for by SCDOT. The CONTRACTOR shall make all SCDOT IT Services requests a minimum of 60 days in advance of the expected need for the equipment or service to ensure adequate time for equipment delivery and integration.

2.2.2 CONTRACTOR Supplied Equipment

All CONTRACTOR supplied equipment shall be in accordance with the SCDOT Traffic Signal Supplemental Technical Specifications, 675.0 General Provisions.

2.3 Maintenance and Operations During Construction

Section 1.4 Operations during Construction and Section 1.5 Maintenance/Repairs of the SCDOT Traffic Signal Supplemental Specifications, 675.0 General Provisions, are amended as follows: the design build team shall be responsible for the maintenance and operations of all existing and newly installed signals, from the commencement of any signal construction activities until the final acceptance of the project. The CONTRACTOR shall be responsible for temporary controller time settings with approval of the Engineer.

At that point in the project when construction activity is about to occur which could affect the operation of any traffic signal within this project, the CONTRACTOR shall request the Department’s concurrence, and the CONTRACTOR shall assume responsibility for maintenance of all traffic signals within this project. This request shall be in writing to the District Traffic Engineer and shall have a written response. In the absence of the request, any activity of the CONTRACTOR which affects the operation of any traffic

signal within this project shall be deemed evidence of the CONTRACTOR's assumption of responsibility for the maintenance of all traffic signals within this project.

The Maintenance of Traffic (as provided in the Traffic Control Plan), and the safety of traffic is of prime importance. Safety will be enhanced by providing for the continuous operation of traffic signals. Full Continuity of Operation shall be maintained by the CONTRACTOR and temporary signal devices shall be in place prior to construction activities that will affect signal operation. Damage to or failure of the existing traffic detection during the project shall be repaired by the CONTRACTOR.

Signals shall NOT be arbitrarily turned off for the convenience of the CONTRACTOR. When the Department gives permission to briefly turn off a signal, complete intersection control using a flagger and/or Police to direct traffic shall be provided.

Any damage to or failure of the detection shall require the contractor to be onsite and actively repairing or replacing the detection with temporary detection within seventy-two (72) hours. The CONTRACTOR shall provide temporary detection equipment until the final detection is installed and operational. Upon installation of the final detection equipment, the CONTRACTOR shall remove the temporary detection equipment.

Associated liquidated damages for failure to re-establish/maintain detection shall be \$1500 per intersection per day.

The CONTRACTOR shall coordinate installation and removal of temporary detection equipment with the Department's designated signal inspectors.

Unless noted otherwise on the Plans or stated in the Special Provisions, it is not permissible to adopt "uncoordinated" operation of adjacent signals. Damage to the interconnection cable between adjacent signals shall be repaired immediately by the CONTRACTOR, at no cost to the Department.

Temporary Signals shall be fully reliable, fully functional, and of professional appearance. This includes placing the signal heads at the proper height above the road, correctly aligning the signal heads with the lanes of traffic, and placing the signal heads at the proper distance from the stop line (see SCDOT Standard Drawings). The installation of a temporary Controller shall include transferring operation while simultaneously turning off the old controller.

2.4 Maintenance of Traffic

The CONTRACTOR shall execute the item of Traffic Control as required by the Standard Specifications, the plans, the Standard Drawings For Road Construction, these special provisions, all supplemental specifications, the MUTCD, and the Engineer.

2.5 Coordinated System Requirements

The CONTRACTOR shall perform the following coordinated signal system timing tasks: Timing Plan Development, and Implementation and Fine Tuning of Signal Timing Plans.

2.5.1 Timing Plan Development

Preliminary Assessment: Prior to beginning the development of the signal timing plans, the CONTRACTOR will evaluate the operations of all coordinated system project intersections to determine any operational and/or geometric changes that would benefit the overall system operations. Additionally, the assessment will also include preliminary recommendations and cycle lengths. The preliminary assessment will be submitted in memo form and will consist of the following:

- Proposed number of timing plans up to 4.
- Proposed cycle lengths.
- Proposed clearance intervals.
- Recommended time-of-day for each plan's time periods.
- Recommended day-of-week for each plan's time periods.
- Preliminary Assessment includes the evaluation of existing equipment and plan testing process.
- Development of timing plans will begin after the approval of proposed clearance intervals has been received from SCDOT.

Development of Base System Timing Plans: The CONTRACTOR will prepare timing plans for systems using SYNCHRO and develop up to four (4) separate time-of-day plans. SYNCHRO inputs shall use the current version of SCDOT's Synchro Default Settings. Default yellow and red clearance times shall be replaced with the signal clearance timing calculations prepared at each intersection.

To prepare the timing plans, traffic turning movement count data shall be collected in 15-minute intervals between 7 AM and 7 PM at the signalized intersections on a typical weekday at the following intersections:

- Bush River Road System
 - Bush River Road @ Zimalcrest Drive
 - Bush River Road @ I-26 EB Off-Ramp/Driveway*
 - Bush River Road @ Morninghill Drive*
 - Bush River Road @ Arrowwood
 - Bush River Road @ Colonial Life Blvd.
- Colonial Life Boulevard System
 - Colonial Life Blvd. @ I-126 WB Ramps
 - Colonial Life Blvd. @ I-126 EB Ramps

The following shall be submitted as part of the development of the base system timing plans: Synchro output sheets from HCM 6th and SimTraffic Intersection Queues reports, the Synchro files, and the timing plan development methodology for department review and approval. Time space diagrams will be developed in Synchro and submitted with the timing plans for review. Based on the results of SCDOT's review, the CONTRACTOR will finalize the Synchro timings. Once finalized, the CONTRACTOR will export the files for importing into ATMS for SCDOT maintained signals.

2.5.2 Implementation and Fine Tuning of Signal Timing Plans

Proposed timing plans will be loaded and tested in the signal shop by the District signal shop or local government signal maintainer with the CONTRACTOR. After successful testing a time plan shall be established for field implementation: CONTRACTOR shall be present in the field during field implementation. The CONTRACTOR will begin to fine tune each system for each time-of-day plan. During the fine tuning, the CONTRACTOR will make recommendations for timing adjustments that will be made in the controllers by the District signal staff.

2.5.3 Final Documentation

The CONTRACTOR will prepare a final project report for each signal system. The report shall include:

- Implemented and fine-tuned TOD schedule.
- Implemented and fine-tuned signal timing plans (Final Synchro plans)
- Databases for each plan.
- Synchro files for each plan

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 6 – Intelligent Transportation System (ITS)

1. GENERAL

The Project involves maintaining and replacement/installation of an existing fiber line that houses South Carolina Department of Administration (SCDOA) and SCDOT Intelligent Transportation System (ITS) communications along I-126. The CONTRACTOR shall maintain connectivity of this fiber line for the duration of this project except for the downtime allowed by SCDOT and SCDOA for transferring the connection to the new line. This project will include removal and disposal of existing ITS elements, furnishing and installing fiber optic cable in the conduits, service boxes, electrical services, and all miscellaneous hardware to make an operational fiber line system. The CONTRACTOR is not responsible for the maintenance or construction of permanent SCDOT ITS elements; however permanent ITS elements should be considered when designing the fiber line and service boxes for future connectivity. The Work Zone Intelligent Transportation System (WZITS) on this project is the responsibility of the CONTRACTOR.

2. INTELLIGENT TRANSPORTATION SYSTEM (ITS) / FIBER OPTIC CABLE (FOC)

The Project includes the removal and disposal of existing ITS elements, maintenance and replacement of an existing fiber line along I-126 through the entire project limits. See Exhibit 5 - Special Provisions and Attachment B - ITS Standard Drawings for details regarding the fiber and ITS system. This is a turn-key project, with the CONTRACTOR removing existing ITS elements, furnishing and installing 120 Single Mode or 144 Fiber Optic Cable in conduits, service boxes, electrical services, and all miscellaneous hardware to make an operational fiber system, as listed, complete to the satisfaction of the SCDOT.

The existing fiber line is single 120 CT FOC that is shared between SCDOT and SCDOA. The CONTRACTOR shall maintain connectivity of this fiber line for the duration of this project except for the downtime allowed by SCDOT and SCDOA for transferring the connection to the new line. This connectivity exception will be allowed over a Saturday night/Sunday morning for a duration of 10 hours between the hours of 20:00 Saturday to 06:00 Sunday. The SCDOT and SCDOA will provide the date of the disconnection when the CONTRACTOR is ready for the transfer.

The CONTRACTOR is advised that the fiber downtime will be strictly enforced. Should the fiber connection go offline or be reduced to negatively affect state operations as a result of this project, liquidated damages will be assessed per incident at a rate of \$10,000.00 (Ten Thousand Dollars) in addition to a rate of \$10,000.00 (Ten Thousand Dollars) for each 1/4 hour interval the system is offline (or any portion thereof).

SCDOT will provide locations to tie the proposed fiber line to the existing fiber line indicated in the map labeled "Fiber Connection Locations" in Attachment B. The CONTRACTOR shall not impact the fiber line or ITS equipment outside of those locations. Please note there is an ITS hub station located in the gore area bordered by WB I-26 Exit Ramp to Bush River Road, EB I-126, and WB I-26 Exit Ramp to EB I-126 that shall not be impacted.

The fiber line shall be placed no more than ten feet from the right of way line on the south side of I-126.

The CONTRACTOR shall provide one additional conduit and service boxes adjacent to the fiber line for use by “others” to house a future ITS fiber line to be installed by SCDOT. The CONTRACTOR is not responsible for the maintenance or construction of permanent SCDOT ITS elements; however permanent ITS elements should be considered when designing the fiber line and service boxes for future connectivity.

No temporary or permanent aerial fiber optic cable installation is allowed.

3. WORK ZONE INTELLIGENT TRANSPORTATION SYSTEM (WZITS)

The Work Zone Intelligent Transportation System (WZITS) shall be the responsibility of the CONTRACTOR and shall cover I-126, I-26, and I-20 for a sufficient distance to cover any anticipated or observe queue lengths. Prior to any construction activities, the CONTRACTOR shall submit a WZITS plan for SCDOT review and approval. The scope of work will include the system set-up, project deployment, project maintenance and project management for all phases of the Work Zone ITS system. All the WZITS components must be operational and online prior to any portion of the existing system going offline. The components will consist of the following to achieve maximum efficiency of the system as well as provide the SCDOT personnel with the most accurate real time traffic data:

- Operations system
- Device communication package
- Portable variable message boards
- Portable queue detectors
- Portable PTZ cameras
- On-site Adjustment of Project

The WZITS shall notify selected SCDOT personnel and/or CONTRACTOR staff by email alerting of the current traffic conditions when the speeds have decreased below 30 MPH for a minimum length of two miles beginning one mile prior to the project limits. The SCDOT shall have the ability to view and remotely control portable cameras in the work zone. The portable cameras shall be placed to provide full coverage in the project limits and all signed detour routes (if applicable). The maximum spacing for WZITS components shall not exceed one mile (1) for portable cameras, two miles (2) for VMS, and one-half mile (1/2) for queue detectors unless specifically approved by the ITS Operations Program Manager. The system shall remain in operation until project completion or until final ITS components have been installed and made operational by SCDOT.

3.1 WZITS Specifications

3.1.1 Operations

The operations shall include at a minimum an interface for operation and control of the WZITS devices. The interface shall allow operators and other SCDOT staff

as well as the CONTRACTOR to interface with the devices for control and operations. The private interface shall also show the health of the devices as well as their communications for maintenance purposes. The interface shall be password protected and allow different levels of security for operations and viewing of the devices.

This item shall also include the necessary decision support system by which the queue detectors are used to provide real time information to the motoring public. The decision support system shall monitor the queue detectors and automatically change messages on the portable message boards as needed. The messages provided by the decision support system shall be derived by the CONTRACTOR and approved by SCDOT.

WZITS will be a stand-alone system for monitoring queue lengths.

All queue sensors, VMS and PTZ cameras used to monitor queue length that report to the smart WZITS system and display real time travel information to the public will NOT be integrated into PALguide. The only devices that will be integrated into PALguide will be PTZ cameras where SCDOT modems are installed. These cameras will not be available for the CONTRACTOR's automated software to monitor queue length and speeds.

The WZITS system shall be pre-programmed to allow messaging for any slow/stopped condition regardless of cause. Depending on the length of the project influence area, multiple portable VMS may need to be placed to ensure proper coverage. The CONTRACTOR (WZITS Design Engineer) shall coordinate with the Statewide TMC to ensure there are no operations overlaps between SCDOT's existing ITS equipment (portable CMS) and the WZITS system in the event of a major crash.

3.1.2 Device Communication Package

The CONTRACTOR shall coordinate with a provider of wireless communications to provide the necessary communications for each device.

SCDOT will install a SCDOT owned modem in the existing pole mounted cameras impacted by the fiber cut. The camera will be available to the CONTRACTOR and the public through SCDOT's 511 app and website. Air time for the SCDOT installed modems will be the responsibility of SCDOT.

3.1.3 Portable Message Board Trailer with Communications

This item shall consist of providing a portable variable message board capable of conveying text messages to the motoring public. The device shall provide at a minimum 3 lines of text, eighteen (18) inches high, eight characters per line. The device shall be self-contained and powered and require no commercial power or hard wired connections. The device shall be capable of communicating to the

CONTRACTOR's communication and control system to support decision making for other WZITS devices.

3.1.4 Queue Detector with Sensor and Communications

The device shall be self-contained and powered and require no commercial power or hard wired connections, and be capable of detecting speed, volume and occupancy of traffic. The device shall be capable of communicating to the CONTRACTOR's communication and control system to support decision making for other WZITS devices.

3.1.5 Portable Camera with Communications

The camera shall provide images remotely to be used to monitor traffic conditions. The camera shall have full pan tilt and zoom capabilities and shall be mounted at a minimum thirty feet above the roadway. The device shall be self-contained and powered and require no commercial power or hard wired connections. The device shall be capable of communicating to the CONTRACTOR's communication and control system to support decision making for other WZITS devices. The CONTRACTOR shall provide a web interface or website that allows SCDOT full access to operate the cameras and also allows the CONTRACTOR/Vendor access.

3.1.6 On-Site Adjustment of Project

The CONTRACTOR shall provide the necessary labor and equipment to move devices as needed throughout the project. This shall include the re-positioning of queue detectors, cameras and sign boards as conditions change throughout the construction project. Movement of devices shall be at the direction of the ITS Operations Program Manager or designee, the Resident Construction Engineer for the construction project, or at the discretion of the CONTRACTOR when deemed necessary.

3.1.7 WZITS Liquidated Damages

The CONTRACTOR is advised that the WZITS downtime will be strictly enforced. Should the total WZITS go offline or the project effect any other SCDOT ITS components, liquidated damages will be assessed at the rate of \$2,500.00 (Two Thousand Five hundred Dollars) for each 1/4 hour interval the system is offline (or any portion thereof). Should any portion of the WZITS go offline, at which the criteria above is not met, liquidated damages will be assessed at the rate of \$500.00 (Five hundred Dollars) for each 1 hour interval each item is offline (or any portion thereof).

EXHIBIT 4d

TRAFFIC DESIGN CRITERIA

Part 7 – Lighting

1. GENERAL

1.1 Permanent Lighting

The work on this project consists of designing, fabricating, furnishing, and installing new roadway lighting and operating electrical systems for the Carolina Crossroads Phase 1 project, which includes the I-126 interstate mainline from the Phase 1 / Phase 3 project limits to east of Greystone Blvd, interchange ramps at Greystone Blvd and Colonial Life Blvd, the system to system ramps between I-126 and I-26, and the I-26 mainline from south of Saluda River to north of Sunset Blvd. In addition, crossing routes at interchanges shall be lighted either a minimum of 750' measured from the ramp terminal, or a minimum of 1,000' measured from the interstate centerline, whichever is greater. The Department will require Continuous Freeway Lighting as defined in the SCDOT Lighting Supplemental Specification for this project.

A conceptual lighting plan for Phase 1 is included in the Project Information Package (PIP) of the RFP which shows proposed light locations and types. Note that additional lights beyond what are depicted in the conceptual lighting plan may be required to properly light the project area as defined in the RFP.

The lighting systems shall consist primarily of high mast poles (100' or 120'), supplemented with standard poles (35') and under bridge lighting fixtures, all of which shall utilize LED technology meeting the requirements of the SCDOT Supplemental Specifications for Roadway Lighting dated December 6, 2018 located in Attachment B. In addition to installation of the lighting systems, the CONTRACTOR will also be responsible for the following:

- Designing all electrical systems
- Submitting Lighting Design Analysis Report
- Coordinating power supply with local utilities
- Submitting as-built electrical plans and system operational manuals
- Providing field demonstration and instruction on system operation and maintenance

All work in the contract shall be in accordance with all of the design criteria in Exhibit 4 and any local codes or requirements.

2. CRITERIA

2.1 Permanent Lighting

The CONTRACTOR shall provide all components to the lighting system to be fully functional upon completion of the project. The components shall include, but not be limited to, high mast poles, breakaway poles, lamps, ballasts, foundations, lowering rings splice boxes, control cabinets, breakers, photocells, and wiring.

The proposed lighting system shall be designed to be compatible with the existing standard lighting system along I-126 east of Greystone Blvd, the existing High Mast lighting systems within the I-126 / I-26 interchange and at Sunset Blvd, and the overall Carolina Crossroads lighting plan.

The lighting systems for the projects shall include high mast pole (100' or 120') structures equipped with lowering rings for system maintenance, supplemented with standard (35') brush spun aluminum poles when high mast are impossible or impractical. In addition to the design and installation of the lighting systems, the CONTRACTOR will also furnish SCDOT with 2 lowering devices (winches) approved by the manufacturer of the high mast poles and lowering systems.

180 degree House Side Shields (HSS) shall be utilized on the High Mast luminaires where possible to minimize light spillback to residential, commercial, and environmental areas.

Bridge mounted Standard 35' light poles shall be installed on the I-26 WB to I-126 EB ramp as shown on the Lighting Concept Plan. The luminaires shall be designed to minimize light spillback along Saluda River.

With the exception of the location identified above, Standard poles (35') should only be utilized in areas such as ramp terminal ends or other perimeter locations where a photometric analysis indicates the high mast systems will require supplementation or in areas where installation of high mast systems is determined to be impossible or impractical.

The locations for the light standards shall be based on a photometric analysis of the roadway design /alignment approved for construction. The CONTRACTOR shall submit the photometric analysis and preliminary lighting plan to The DEPARTMENT for review with the Preliminary Road Submittal Package. Minor shifts in pole locations may be permitted during final design and during construction to accommodate design features that are subject to field changes such as drainage structures.

The pole setback for standard poles will vary based on the speed and cross section design of the roadway. Standard 35' light poles located within the right of-way or within the clear-zone of the roadway shall be equipped with breakaway supports designed so that no fixed part of the support extends further than three inches above ground level. When used, the breakaway capability of the support shall incorporate the use of breakaway electrical connectors so that no live electrical wires exist after impact by a vehicle.

All high mast poles located within the clear zone shall be protected by guardrail or barrier wall.

The CONTRACTOR will be responsible for obtaining boring data to properly design high mast foundations.

Underdeck lighting shall be utilized at bridge overpasses as needed per the photometric analysis. Underdeck luminaires shall be a wall mounted assembly mounted on the bridge

pier or cap as indicated in the SCDOT Supplemental Specifications for Roadway Lighting.

Any disturbed soil resulting from foundation installation, pull box installation or open trenching shall be backfilled, compacted and/or leveled in accordance with the Supplemental Specifications for Roadway Lighting. Disturbed soil shall be seeded in accordance with Section 810 of the Standard Specifications. In addition, prior to leveling and seeding around foundation installations, The CONTRACTOR shall remove all forms and dispose of all excess or waste materials, including concrete, at an offsite location. This site will be approved by the Engineer. No dumping will occur on the highway right-of-way or adjacent lands.

Upon acceptance of the completed project, SCDOT will assume maintenance and operational responsibilities for the lighting systems. The CONTRACTOR will be required to provide SCDOT with operational manuals for all elements of the systems as well as as-built electrical plans. Field instruction and demonstration of such items as, but not limited to, the high mast lowering devices will also be included as part of the contract.

2.2 Photometric Analysis Parameters

The CONTRACTOR shall use the illuminance calculation method described in the AASHTO Roadway Lighting Design Guide for lighting system design. The design shall include a light loss factor (LLF) of 0.9 for LED luminaires. The photometric analysis using 6 feet by 6 feet grid mentioned in Section 1.7 of the SCDOT Design Build LED Roadway Lighting Spec (12-6-18) is intended for all road areas.

EXHIBIT 4e

HYDRAULIC DESIGN CRITERIA

1. GENERAL

Perform all hydrologic and hydraulic drainage designs in accordance with the “SCDOT’s Requirements for Hydraulic Design Studies”, May 2009, Stormwater Quality Design Manual, and Project Design Criteria as listed in Exhibit 4. Designs, at a minimum, to address:

- Best Management Practices
- Bridge-Sized Culverts, Bridges, and Scour
- Cross-line Pipes and Non-Bridge Sized Culverts
- Ditch Capacity and Stability Analyses
- Sediment and Erosion Control
- Stormwater Quality and Post Construction Designs
- Storm Sewer Systems, Temporary and Permanent

2. CRITERIA

2.1 Roadway Drainage

Evaluate the pre- and post-developed hydrologic and hydraulic conditions for roadway drainage. Ensure offsite areas that affect the hydraulic systems and outfalls of this Project are accounted for and are assigned appropriate impervious cover factors depending on hydrologic method.

Perform hydraulic analyses, to include headwater and tail-water effects, on all crossline and median drainage structures for the design storm event. Additionally, evaluate the 50-year surcharging event for median inlets in sag locations, the 100-year, and overtopping event for crosslines. Pipes or culverts crossing multiple alignments shall be designed to the criteria of the highest roadway classification crossed by the pipe or culvert.

Any crossline pipes identified in Attachment B or by the CONTRACTOR as undersized in the Ultimate Project Design Footprint and requiring additional capacity to meet SCDOT requirements shall be replaced or supplemented with an additional crossline for its entire length. The crossline pipe’s capacity shall be based on the larger of the estimated flows resulting from the conditions at the conclusion of the Interim Work or the future construction of the Ultimate Design. Use HY-8 for culverts and GEOPAK Drainage when a crossline is part of a storm sewer system.

Any closed drainage system pipes and inlets (new or retained existing) within the Ultimate Project Design Footprint shall be designed based on the larger of the estimated flows resulting from the conditions at the conclusion of the Interim Work or the future construction of the Ultimate Project Footprint. In situations where the Project requires that existing pipes outside of the project limits need to be replaced to provide additional capacity, the capacity for the new pipes shall be based on the larger of the estimated flows resulting from the conditions at the conclusion of the Interim Work or the future construction of the Ultimate Project Footprint.

When sizing pipes and other drainage features which include consideration of a portion of the Ultimate Project Design Footprint which will not be constructed as part of this Project, increase the proposed future change to impervious area within the drainage basin that is within right-of-way by 20% to account for future design modifications.

Maximum allowable deflection without a radius for proposed box culverts or box culvert extensions is 15 degrees measured along the centerline of the box culvert. Use a minimum radius of 30 feet for deflection angles greater than 15 degrees.

Design new and analyze existing closed-drainage systems with GEOPAK drainage software. Use Type-25 catch basin along new median barriers. Place inlets at staggered stations when a grade separation exceeds eighteen (18) inches or cantilever walls are used. Do not include upstream systems in the designs but do account for the upstream drainage areas at the first inlet that the upstream drainage system ties into. When tying into existing systems flowing off the project limits, at a minimum, include one downstream pipe link of the system in the design to verify pipe capacity. In locations where future phases will be constructed, ensure proposed drainage systems are designed to account for the Ultimate Project Design Footprint, and inlets and longitudinal pipes are not constructed under future lanes. Provide inlets along barriers or retaining walls to meet spread requirements for future widening conditions.

Perform open channel designs, to include ditch capacity and stability analyses on the median, gores, sideline, and outfall ditches within the limits of the project. When existing ditches are filled in due to new slopes, design and construct means to convey the runoff to an outfall. Provide additional information and analyses for those locations where structures are upsized to verify post conditions will not create nor contribute to adverse downstream impacts. Minimize velocities to non-erosive rates. Summarize the pre- and post-developed outfall conditions.

Provide drainage design for each phase of traffic control. Design temporary storm drainage systems, as may be required, using a rainfall intensity of 2 inches/hour. Minimize ponding at flood sensitive locations and the low side of barrier walls. Demonstrate a positive drainage plan at staging transition points. Include drainage sheets within each phase of the traffic control plans to show locations of temporary drainage networks, outfall locations, and temporary drainage details.

Replace all 15-inch pipes with minimum 18-inch pipes at all locations where design warrants retaining 15-inch pipes, to include driveways.

If pipes need to be abandoned, do so by filling with flowable fill. Note pipe locations that are filled with flowable fill on drainage sheets.

All new pipes under rigid or flexible pavement shall not encroach into the bottom of the pavement structure.

When retaining Type-5 and Type-6 catch basins, convert to Type-17 (719-017-RX). When retaining Type-7 catch basins, convert to Type-18 (719-018-RX). When conversions are not practical, replace with new structures. Replace all damaged Type-9

catch basins with Drop Inlet Type-112 (719-112-XX) within controlled access locations only. Replace all damaged Type-9 catch basins with Type-9 Ditch Installation (719-009-03) where practical. Replace all other damaged Type-9 catch basins using Type-9 Top Slabs with Integral Throat walls only (719-009-01). Replace damaged inlets such as DI 24x24, Type-12 and Type-112. Include notes on the drainage sheets when retaining or replacing these structures. All drainage structures shall be immediately accessible to the final surface grade by either a manhole or grate access. Blind junctions are prohibited in new storm sewer systems.

At locations where fill height is greater than or equal to ten feet, provide a minimum five foot buffer between the toe of fill and the nearest top of bank of any proposed sideline ditch or swale. A detail is included in Attachment B.

Provide drainage conveyance structures to intercept offsite runoff prior to reaching the toe behind constructed walls. Design the structures to convey the 10-year storm event.

Perform field and video inspections on retained cross-line structures that have not been inspected, in accordance with the SCDOT's Pipe and Culvert Inventory and Inspection Guidelines (2011) with exceptions noted herein:

- Inspect retained pipes 18-inches and greater in diameter using a pipe camera system (no laser).
- Inspect retained box culverts via direct measure techniques utilizing a video camera to document condition, jointing, and obstructions.
- Perform a condition assessment to evaluate inlets, outlets, joints, cracks, spalling, slope, sediment, debris, efflorescence, and rust staining. Additionally, note all drop inlet structural deficiencies and outfalls in need of regrading for positive drainage or armoring.
- Prepare an inspection report and summary table for recommended alternatives. Acceptable remedial alternatives are replace, retain and seal, retain and clean, retain and clean and line, or a combination of these. Label one table column *Recommendations for Pipe* as depicted in Attachment B and list the chosen alternatives. Additionally, include a summary of the inlets with structural deficiencies and outfalls that are in need of repair to promote positive drainage. A SC Registered Professional Engineer shall sign the report. Submit report a minimum of 90 days before the submittal of any plans that incorporate the remedial alternative proposed.
- SCDOT will take necessary measures to ensure the deficiencies are remediated, or rendered harmless. Such measures will include self-performing, retaining a qualified firm, or negotiating a construction change order with the CONTRACTOR.

Implement the alternatives as directed in the column *Recommendations for Pipe* in the Video Pipe Inspection Summary located in Attachment B. Pipes within the project limits may be replaced in lieu of repaired. Verify the hydraulic capacity of the pipes. When analyses do not demonstrate compliance with the Hydraulic Design Requirements and other Criteria, replace the pipes or make other improvements to the system to achieve compliance. Analyses shall reflect the “n” value for the liner material

and any reduction in diameter. Add notes to the plan sheets for the chosen alternatives when existing pipes are retained.

Avoid placing drainage structures under pavement and adjacent to pavement where excavation for maintenance of the structure would impact the pavement structure in roadway sections without curb and gutter. Avoid placing drainage structures in locations where access can only be obtained with a lane closure. In addition to the drainage structures covered in the Standard Drawings, this applies to locations where two different pipe sizes and shapes are connected, such as with collars, headwalls, and bulkheads.

Investigate post-construction impacts at all right-of-way outfall locations to ensure post-construction discharges will not create adverse downstream impacts nor contribute to existing adverse downstream impacts.

The CONTRACTOR shall coordinate with the CSX Railroad when proposed construction activities will affect the drainage facilities within or across the CSX right-of-way. Post-developed discharges and volumes shall be equal to or less than pre-developed discharges and volumes for all locations draining to or on CSX right of way. See Exhibit 6 for information regarding Railroad requirements and CONTRACTOR's responsibilities.

Underground detention is not allowed.

At a minimum, allow less than 0.2 cfs bypass flow at the superelevation rollover point (0% cross slope) in the 10-year event.

Drainage structures and pipes placed along temporary concrete median barriers that will remain in place for a duration longer than one (1) year or will remain after the Project completion, shall be designed to final design standards for the highway classification.

Bridge deck drains shall not be allowed to discharge directly into surface waters or CSX's right-of-way.

Bridge end drainage may consist of a single or series of standard concrete flume(s), catch basin(s), or other SCDOT approved methods employed individually or in combination to limit bypass gutter flow onto an erodible surface to 0.20 cubic feet per second. Include calculations showing discharge at each bridge inlet, each end collector, and bypass flow at each end collector in the Preliminary Hydraulic Report. Do not provide end collectors at locations where the gutter-line is located on the high side of superelevation.

2.2 Bridge Hydraulics

Model natural, existing, and proposed conditions for bridges and bridge-sized culverts that are to be constructed, replaced, widened, or extended over water crossings using the 1-D model HEC-RAS. Include backwater effects from any downstream controls. Refer to the HEC-RAS Reference Manual v4.1 or latest edition for guidance on setting

up cross sections and other inputs within the model(s). In addition to the four cross sections described within the Manual, include additional cross sections, a minimum 500 feet upstream and downstream, as necessary to achieve a downstream limit where a change in starting elevation will not affect the computed high-water depth at the bridge and the upstream limit extends to the limit of backwater from the bridge caused by the bridge. The hydraulic model can be executed starting at normal depth then subsequent runs can be started three feet below and above normal depth to see if the model converges before the location of the proposed bridge. Use the USGS gage at Riverbanks Zoo as the minimum downstream model limit. See Attachment B item 3 for additional instructions on pier/pile placement and other setbacks.

Summarize the inputs and results. Include at a minimum, natural, existing, proposed, and FEMA conditions, freeboard, and backwater.

The CONTRACTOR shall perform the scour analysis for the 100-yr and 500-yr storms in accordance with the Department’s Requirements, USGS Scour Envelope Curves, and the latest FHWA’s HEC-18 and HEC-20 editions. Plot the 100-yr and 500-yr total scour lines on the bridge plan and profile sheet.

The modeling efforts for all crossings shall demonstrate no adverse impacts to the upstream and downstream properties outside of the SCDOT right-of-way as a result of project construction. When adverse impacts are unavoidable, the CONTRACTOR shall acquire flood easements for properties affected.

For the new bridge over the Saluda River, the bridge length may not be decreased and the conveyance opening may not be reduced. The following two scenarios shall be modeled:

- To determine the minimum low chord, the new bridge shall be modeled with the upstream I-26 structure being replaced to the meet freeboard requirements in this section below. Assume the future I-26 bridge will have bents in line with the proposed bridge’s bents and have 6-foot diameter columns.
- To verify no impacts to upstream structures in the 100-yr storm, the new bridge shall be modeled with the existing upstream I-26 structure remaining following Phase 1 construction.

For the new bridge over the Saluda River, piers shall not be placed within the center/thalweg of the channel, shall not be placed within 10 feet of the existing pier line extended off the I-26 bridge, and shall be placed at the same skew as the existing upstream I-26 bridge. See Attachment B for further guidance.

In determining the minimum low chord for the new bridge over the Saluda River , in addition to designing the bridge with a minimum freeboard over the design storm event per the Hydraulic Design Requirements, the low chord shall remain above the water surface elevation produced by a 67,000 cfs discharge at the bridge crossing without pressure flow. Use the latest high water marks for the Saluda River recorded by the USGS.

The CONTRACTOR shall evaluate and mitigate for scour by using HEC-14 for bridge-size culvert structures.

The CONTRACTOR shall design and construct all bridges consistent with final models that do not demonstrate any adverse impacts and otherwise meet the constraints and performance requirements in this Section 2.2 and other applicable requirements of the Contract.

2.3 Floodplains and Floodways

This project falls within FEMA Flood Insurance Rate Maps (FIRMs):

- 45063C0163J for Lexington County dated July 5, 2018.
- 45079C0238L and 45079C0239L for Richland County dated December 21, 2017.

The CONTRACTOR shall coordinate with the local County Floodplain Administrators for Lexington and Richland Counties to request for floodplain management compliance.

2.4 Sediment and Erosion Control and Water Quality

Determine the classification of the receiving waterbodies and note downstream impairments.

Develop a plan to meet the requirements of SCDOT's Construction Permit SCR160000 for erosion and sedimentation control during construction for the entire project length. Include inlet structure filters, sediment dams, and other BMPs.

Provide additional water quality treatment when outfalls discharge to 303(d) listed, TMDL, and other sensitive waters. The Saluda River from below the Lake Murray Dam to the confluence with the Broad River is a state scenic river. Exhaust all options prior to implementing structural controls.

Provide a 6-inch asphaltic concrete curb and flume on the low sides of the roadway where fill slopes are greater than 10 feet in height and are steeper than 3:1. Use curb detail (5) and placement detail (2) from Standard Drawing 803-105-00. Use flume details from Standard Drawings. Hand shape radius for curb at flumes. Space flumes a maximum of 100 feet as needed to accommodate drainage for the facility. Provide riprap and geotextile for erosion control under riprap at the toe of the flume. At bridge ends, utilize Standard Drawing 805-325-XX.

2.5 NPDES Permitting

Prepare the NPDES permit package(s), to include the Stormwater Prevention Plan (SWPPP) checklist found in Attachment B, and perform the coordination with SCDHEC to obtain the permit. The SCDOT reviews, signs and submits the package to SCDHEC.

EXHIBIT 4e – HYDRAULIC DESIGN CRITERIA
--

The CONTRACTOR shall coordinate a meeting with the SCDOT's Mega Projects Office Construction Manager, Environmental Coordinator, and the Hydraulic Support Office to discuss project segmentation (if applicable) and schedule for NPDES permitting.

EXHIBIT 4f

GEOTECHNICAL DESIGN CRITERIA

1. GENERAL

All subsurface exploration, geotechnical design, and construction for the Project shall be carried out in accordance with SCDOT Geotechnical Design Manual (GDM), 2019, Version 2.0 and the design criteria herein.

2. CRITERIA

The Geotechnical Base Line Report (GBLR) prepared by F&ME Consultants, Inc. dated November 9, 2018, has been provided in the Project Information Package for geotechnical information. Subsurface investigation field testing data files have also been provided electronically in Attachment B.

All geotechnical testing shall comply with the requirements of the SCDOT GDM. Geotechnical design shall comply with the requirements stated below and the Special Provisions listed in Exhibit 5. Geotechnical information provided in the Appendix of the GBLR (field and lab data only) as part of this RFP may be used in the design of this project at the CONTRACTOR's discretion. If the CONTRACTOR elects to use the geotechnical information in the Appendix of the GBLR, the CONTRACTOR shall verify that the information provided is applicable to the CONTRACTOR's specific design. The CONTRACTOR shall verify that geotechnical information provided in Attachment B meets the requirements for a geotechnical investigation for this specific project as required by the GDM. If the requirements of the GDM are not met, then the CONTRACTOR shall provide additional geotechnical investigation to meet the geotechnical requirements for this specific project.

Where required by design and construction, all temporary and permanent shoring submittals shall be reviewed and approved by the Lead Design Engineer and Geotechnical Engineer of Record (GEOR) for the Project prior to submitting to SCDOT's Resident Construction Engineer (RCE).

2.1 Bridge

Design the proposed bridge structures in accordance with the GDM.

The CONTRACTOR shall be responsible for the load testing of all foundations used on this project if required by design. All testing reports for driven piles shall bear the legible seal, signature, and date of the testing firm's engineer registered as a Professional Engineer in the State of South Carolina. The CONTRACTOR's EOR and GEOR shall review and approve, in writing, all load test reports prior to submitting the reports to SCDOT for review and acceptance or comment. Comments made by SCDOT shall be reviewed and rectified by the CONTRACTOR's designer prior to the results of the load testing being used in design.

2.1.1 Driven Piles

The CONTRACTOR shall provide a Pile Installation Plan (PIP) that shall include the pile index testing program in addition to the requirements of the

Standard Specifications. The pile index testing program, if index piles are used, shall at a minimum include the Bent and Pile number of each pile to be tested as well as the number of index piles to be tested. The number of index piles shall conform to the SCDOT GDM. The GEOR and EOR shall provide a QC review of the CONTRACTOR's PIP prior to submitting to SCDOT Owner Verification Firm (OVF) for QA review. After performing QA review, OVF will submit the PIP to the SCDOT Construction Manager for Mega Projects (CMMP) for final acceptance.

If Pile Driving Analyzer (PDA) testing is required for driven piles by the GEOR's design, the CONTRACTOR's PDA testing shall be performed by a PDA certified operator with a Certificate of Proficiency from Pile Dynamics, Inc. of Advanced or higher. The PDA certification shall have been renewed within 4 years of the date of pile installation. In addition to the PDA testing, Case Pile Wave Analysis Program (CAPWAP) analysis shall also be performed.

The GEOR shall review the PDA testing data and reports and develop driving criteria for the production piles. Following installation of the production piles, the GEOR shall perform a QC review of all production pile driving logs, PDA testing reports, and RFC plans to verify that all criteria have been met. If all criteria have not been met, the CONTRACTOR shall perform additional work as necessary to ensure all criteria have been met. The EOR shall submit an As-Installed Driven Pile Foundation Package for each structural element supported on driven pile foundations that includes all PDA testing reports and production pile driving logs with a certification statement that all criteria have been met.

The As-Installed Driven Pile Foundation Package shall be submitted to OVF for QA review. After performing QA review, OVF will submit the As-Installed Driven Pile Foundation Package to the SCDOT CMMP for final acceptance. As-Installed Driven Pile Foundation Packages submitted with any deficiencies in criteria that have not been specifically addressed will be rejected. This process shall also be followed when PDA testing is not required by the GEOR's design.

2.1.2 Drilled Shafts

The CONTRACTOR shall provide a Drilled Foundation Installation Plan (DFIP) in accordance with the requirements of the Standard Specifications. The GEOR and EOR shall provide a QC review of the CONTRACTOR's DFIP prior to submitting to OVF for QA review. After performing QA review, OVF will submit the DFIP to the SCDOT (CMMP) for final acceptance.

Following installation of the drilled shafts, the GEOR shall perform a QC review of all production drilled shaft logs, CSL and TIP test reports, and RFC plans to verify that all criteria have been met. If all criteria have not been met, the CONTRACTOR shall perform additional work as necessary to ensure all criteria have been met. The EOR shall submit an As-Installed Drilled Shaft

Foundation Package for each structural element supported on drilled shaft foundations that includes all testing reports and production drilled shaft logs with a certification statement that all criteria have been met.

The As-Installed Drilled Shaft Foundation Package shall be submitted to OVF for QA review. After performing QA review, OVF will submit the As-Installed Drilled Shaft Foundation Package to the SCDOT CMMP for final acceptance. As-Installed Drilled Shaft Foundation Packages submitted with any deficiencies in criteria that have not been specifically addressed will be rejected.

2.2 Roadway

The CONTRACTOR shall obtain SCDOT approval prior to using reinforced soil slopes (RSS). The CONTRACTOR shall obtain SCDOT approval prior to using fill slopes or ditch slopes steeper than 2H:1V. Prior to submitting any design submittals, the CONTRACTOR shall obtain SCDOT approval prior to using fill slopes or ditch slopes steeper than 2H:1V.

Miscellaneous overhead structure foundations such as lighting and signage shall be designed in accordance with AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, effective as of the Final RFP release date.

2.3 Seismic

Seismic design of the bridge structures and bridge embankments shall be required in accordance with the SCDOT Geotechnical Design Manual and SCDOT Seismic Design Specifications for Highway Bridges.

Three-Point Acceleration Design Response Spectrum (ADRS) curves have been generated for the Carolina Crossroads project. The ADRS curves shall be used in the design of each bridge structure and bridge embankment on the project.

SEE	0.39	0.82	0.28

The range of natural period of the soil profiles on the project have been calculated at different locations within the limits of the CCR Program, based on the shear wave velocity and soil thickness measurements made at those locations. The locations correspond to boring locations provided in the boring location plan in the GBLR. The Structural Engineer of Record (SEOR) shall calculate the fundamental period range of interest of each seismically designed structure and compare the earthquake period, soil column period, and structure period. If these three fundamental periods coincide, the SEOR shall demonstrate that structural design has accounted for this greatest potential

PROJECT DESIGN DELIVERABLES

1.0 GENERAL

This exhibit describes the makeup of submittal packages used for Design Review and permanent record retention by SCDOT. All submittals shall be in accordance with Departmental guides, including but not limited to, the Road Design Reference Material for Consultant Prepared Plans, as amended herein, and shall include all checklists, indexes and electronic files in the specified format and folder structure.

2.0 SUBMITTAL PACKAGES

SUBMITTAL PACKAGE CONTENTS	HARD COPIES
Preliminary Submittal Packages	
Preliminary Roadway Submittal Packages shall include:	
<ul style="list-style-type: none"> • Preliminary Roadway Plans 	1HS
<ul style="list-style-type: none"> • Conceptual Signing Plans

• Foundation Installation Plan Submittals	
• Foundation Testing Submittals	
• Hazardous Materials Testing Submittals	
• Shop Plans	
• Working Drawings	
• NPDES Submittals	
• Revised Permit Drawings	
• Coordinated Traffic Signal System Deliverables	
• As-Built Plans	

* Reviews for these submittals are not held to the standard periods as outlined in Article II, Section D of the Agreement.

3.0 SUBMITTAL PACKAGE CONTENTS

3.1 All Submittals Packages

- Partial submittal of the required contents of the preliminary, right of way, or final submittal packages will not be allowed.
- Include the following stamp in the upper right corner of all Road Plan Sheets “Right of Way secured under Project ID P027662”. Cross Section Sheets do not need to contain this note.
- Perform a thorough QC review of the submittal packages prior to submitting them to SCDOT.
- Digital or inked signatures are allowable for RFC documents. However, only one method of signature, digital or inked, is allowed per Project ID.
- Plans shall be submitted electronically as a landscape 22”x36” pdf file.
- Reports shall be submitted electronically as a portrait 8.5”x11” pdf file. Larger sheets may be included for charts, diagrams, etc.
- At the request of SCDOT or its representative, Contractor shall submit calculations and/or design files, including computer aided drafting files for review with a submittal package.

3.2 Preliminary Submittal Packages

3.2.1 Preliminary Roadway Plans

- The plans shall include, but not be limited to, the following:
 - title sheet
 - roadway typical section
 - roadway plan and profile
 - cross sections
 - existing right-of-way

3.2.2 Conceptual Signing Plans

- The plans shall:
 - include SCDOT Typical Signing border sheet;
 - be overlaid with the proposed roadway plan with stationing, lane lines, paved shoulders, guardrail, and bridge, culvert and other overhead structures clearly indicated;
 - be commensurate with the Interchange Modification Report;
 - reference special instructions in Exhibit 4d – Part 4, Section 2.4 ;
 - at minimum include, a level of detail consistent with the conceptual signing plans included in Attachment B including future signs necessary for the Ultimate Design;
 - include all necessary information to clearly demonstrate the signing requirements for the Project.

3.2.3 Conceptual Lighting Plans with Photometric Analysis

- The submittal shall include, but not be limited to the following:
 - Photometric Analysis
 - Initial Lighting Roll Plot

3.2.4 Conceptual ITS Design Plans

- The Contractor shall develop and furnish conceptual design plans as indicated in Exhibit 5

3.2.5 Preliminary Bridge Plans

- The plans shall include, but not be limited to, all items described in Chapter 3 of the SCDOT Bridge Design Manual.

3.2.6 Preliminary Hydraulic Reports

- Preliminary Roadway Drainage Design Reports shall include, but not be limited to, the following:
 - Pre/post outfall summaries
 - HW/D summaries for crosslines
 - Open channel designs
 - Address permitting requirements
 - Field Investigation and Pipe Inspection Report
- Preliminary Bridge Hydraulic Design Reports shall include, but not be limited to, the following:
 - Preliminary Hydraulic Model Design and Supporting Documentation including Hydrology Data Sheets, the Hydraulic Design and Risk Assessment Form, FEMA Compliance Report and the NEPA Bridge Replacement Scoping Trip Risk Assessment Forms (for each applicable location)
 - Modeling files and survey data
 - Address permitting requirements (for each applicable location)
- NPDES permitting-if permitting is going to be phased, address how submittals will be phased and anticipated submission schedules.

3.2.7 Preliminary Roadway & Bridge Geotechnical Reports

- The geotechnical reports shall include, but not be limited to, the following:
 - all items described in Chapter 21 of the SCDOT Geotechnical Design Manual and the latest design memorandums

3.2.8 Signal Warrant Analysis

- Contractor shall provide any necessary Signal Warrant Analyses for removal or installation of signals in the Preliminary Roadway Submittal Package.

3.2.9 Preliminary Seismic Design Summary Report

- In the report, document the seismic design strategy that is planned to achieve the required seismic performance criteria for the bridge and describe the seismic design approach for the bridge. The report shall include the following at a minimum:
 - A description of the project including bridge location (Longitude and Latitude), the geological and hydrological features of the site, bridge preliminary configuration including layout, superstructure, substructure, bearing types, span lengths, end bent and interior bent type, skew angle, shear keys, expansion joints, wingwalls, backwalls, shearwalls, etc.

- Seismic design specification references
- SEE and FEE Design Earthquakes, ADRS data, the Operational classification, and the Seismic Design Category (SDC)
- The analysis strategy to capture the structure seismic performance, including seismic models to be analyzed and how structure elements are going to be modeled
- A discussion of the expected performance of the bridge in regard to elastic and inelastic behavior (locations where plastic hinging is expected) and the expected service performance and damage levels
- Displacement and ductility criteria
- The name(s) of computer software that will be used for modeling
- Any unique structural or geotechnical issues affecting the seismic design or the design response spectrum (when a site-specific study is required)

3.2.10 Traffic Analysis and/or Interchange Modification Report

- See Requirements for Interchange Modification Report in Attachment B.

3.2.11 30% Contractor Managed Utility Adjustment Plans

- The Contractor shall develop and furnish conceptual design plans as indicated in Exhibit 7

3.3 Right of Way Submittal Packages

3.3.1 Right of Way Plans

- The plans shall include, but not be limited to, the following:
 - title sheet
 - roadway typical section
 - Special paving details such as jointing, dowelling, tie bar placement, etc.
 - strip map, including property closures
 - right of way data sheet
 - roadway plan and profile
 - cross sections (include sediments basins, dams and crosslines)
 - clearing limits on plan view and cross sections
 - drainage features
 - existing right of way
 - proposed right of way

3.3.2 Signing Plans

- The plans shall:

- include SCDOT Typical Signing border sheet;
- be overlaid with the proposed roadway plan with stationing, lane lines, paved shoulders, guardrail, and bridge, culvert and other overhead structures clearly indicated;
- be commensurate with Interchange Modification Report;
- reference special instructions in Exhibit 4d – Part 4, Section 2.4 for special instruction for this submittal;
- include, at minimum, a level of detail consistent with the conceptual signing plans included in Attachment B including future signs necessary for the Ultimate Design;
- indicate that all signs and sign structures are within SCDOT right of way;
- include all necessary information to clearly demonstrate the signing requirements for the Project.

3.3.3 Conceptual Work Zone Traffic Control Plans

- The plans shall include, but not be limited to, the following:
 - Staging Narrative
 - Concept Staging Plans
 - Widening/Rehabilitation Typical Sections for each Stage of Construction and any critical points
 - Show areas where additional Right-of-Way is warranted for the purposes of Staging
 - Show the Separation of Adjacent Travel Lanes / Traffic Splits as described in the SCDOT Procedures and Guidelines for Work Zone Traffic Control Design
 - Show areas where the travel lane leaves the existing roadway bed or direction on new alignment (transition area) and returns (termination area)

3.3.4 ITS Design Plans

- The Contractor shall develop and furnish conceptual design plans as indicated in Exhibit 5

3.3.5 Work Zone ITS Plans

- The Contractor shall develop and furnish work zone ITS design plans for all phases of the Project

3.3.6 Conceptual Traffic Signal and Communications Plans

- Conceptual Traffic Signal and Communications Plans shall include, but not be limited to, the following:
 - SCDOT Typical Signal Plan Border Sheet

- Utilize proposed/anticipated Pavement Marking Plan as base plan
- North arrow
- Traffic Signal poles, spanwire, heads, detection, and communication runs/equipment indicated on plan
- Signal Equipment Chart completed
- NEMA Phasing Chart completed
- Preliminary Yellow and Red timing calculations
- Diagrams indicating clearance distances
- Communications Plans shall detail Fiber Optic and Wireless communication paths, attachments, directional bores, or other appurtenances necessary for proper operation of the communications system
- If temporary traffic signals are utilized with this project, Temporary Traffic Signal Plans and calculations shall be submitted concurrent to any review periods established for Traffic Signal Plan review or any Work Zone Traffic Control Plan review.

3.3.7 60% Contractor Managed Utility Adjustment Plans

- The Contractor shall develop and furnish conceptual design plans as indicated in Exhibit 7

3.3.8 Right of Way Hydraulic Reports

- Roadway Drainage Design Reports shall include, but not be limited to, the following:
 - Updates to the preliminary roadway drainage designs
 - Inlet spacing calculations and bridge deck drainage calculations
 - Geopak drainage summaries
 - Storm sewer system profiles for the design storm and the 50-yr event at sag locations
 - Sediment and erosion control designs
 - Water quality and post construction designs
 - Detention designs and supporting documentation
- NPDES package shall be provided for review in preparation for submittal to SCDHEC/OCRM.

3.4 Final Submittal Packages

3.4.1 Final Roadway Plans

- The plans shall include, but not be limited to, the following:
 - title sheet
 - roadway typical section
 - Special paving details such as jointing, dowelling, tie bar placement, etc.

- right-of-way data sheet
- roadway plan and profile
- cross sections
- clearing limits on plan view and cross sections
- drainage design (include drainage tables behind each drainage sheet)
- existing right-of-way
- proposed right-of-way
- summary of estimated quantities
- strip map including property closures
- sediment and erosion control design
- proposed barrier locations
- permanent signing plans
- permanent pavement markings plans
- work zone traffic control plans
- traffic signal and communications plans
- permanent lighting plans and lighting design analysis report
- Electronic files submittals: Information herein is an abbreviated list of electronic deliverables taken from the Road Design Reference Material for Consultant Prepared Plans. Submit Checklists, Indexes and files in accordance with the format and attachments specified in the document.
 - CADD electronic files index with the detailed descriptions of the contents of each file must be provided in a “readme” file. The index should also include detailed descriptions and names of horizontal and vertical alignments and profiles utilized by the GEOPAK software on the project. A copy of the file folder structure is shown in Road Design Reference Material for Consultant Prepared Plans.
 - All surveyed mapping, control points, benchmarks, GPS setup, 2D or 3D contours, spot points, survey notes, DTM, breaklines, TIN files, aerial photos and all other CADD files and data used in developing surveys for the project. Also, the survey points should be provided in ASCII file format (Point number, N, E, Z, and Descriptions). Contact information for the survey company should be provided. All electronic survey files are to be placed in a separate folder.
 - All MicroStation files including all files that would supplement the ability to view files correctly such as reference files and cell libraries.
 - All .gpk files and any other Geopak files, such as input and criteria files that are needed to facilitate the review of plans should be submitted.
 - If other Civil Engineering software packages were utilized for project development then all binary or ASCII files that are software dependent for that package shall be submitted

- All electronic files that pertain to the construction stake out. Files will be in SMI format and will include all horizontal controls, vertical controls and templates. SMI data will be provided in a separate folder.
- Copies of all hand written or electronic calculations or notes (non-CADD) that will facilitate verification and review of the plans.
- On each printed sheet in the plans, the electronic folder name, filename, and date must be shown.
- Provide plot setting to include levels used, symbology, line weights and pen tables in order to reproduce all plans sheets
- All roadway structures' design criteria with calculations will be provided in a separate folder.
- Pavement Design will be provided in a separate folder with soil support data, traffic volumes, and ESAL's
- Electronic files for specifications and special provisions in Adobe PDF or Microsoft Word format
- Approved Design Exceptions to AASHTO and/or SCDOT design standards developed during design

3.4.2 Final Bridge Plans

- The plans shall include, but not be limited to all items described in Chapters 3 and 6 of the SCDOT Bridge Design Manual. Partial submittal of the required contents of the final set of plans will not be allowed for this project. However, the Contractor may divide the bridge into segments, with each segment having a stand-alone final set of plans which accounts for interaction of adjacent segments.
- Electronic files submittals:
 - All MicroStation files including all files that would supplement the ability to view files correctly such as reference files and cell libraries.
 - Copies of all hand written or electronic calculations or notes (non-CADD) that will facilitate verification and review of the plans.
 - Electronic files for specifications and special provisions in Adobe PDF or Microsoft Word format
- Approved Design Exceptions to AASHTO and/or SCDOT design standards developed during design

3.4.3 Final ITS Design Plans

- The Contractor shall develop and furnish ITS design plans as indicated in Exhibit 5

3.4.4 Work Zone ITS Plans

- The Contractor shall develop and furnish work zone ITS design plans for all phases of the Project

3.4.5 100% Contractor Managed Utility Adjustment Plans

- The Contractor shall develop and furnish conceptual design plans as indicated in Exhibit 7

3.4.6 Final Hydraulic Report

- Final Roadway Drainage Design Reports shall include, but not be limited to, the following:
 - Updates to the Right-of-Way hydraulic drainage designs
- Final Bridge Hydraulic Design Reports shall include, but not be limited to, the following:
 - Final Hydraulic Model Design and Supporting Documentation including all updated forms
 - Final Modeling files
 - Scour Study- additionally plot the 100- and 500-year lines on the bridge triple profile sheet (for each applicable location)
 - Address CLOMR and/or “No Impact” Certifications (for each applicable location)
 - Include the hydrology data for bridges, culverts and pipes greater than 48 inches on the bridge triple profile sheets
- Complete NPDES package

3.4.7 Final Road & Bridge Geotechnical Reports

- The geotechnical reports shall include, but not be limited to, the following:
 - all items described in Chapter 21 of the SCDOT Geotechnical Design Manual and the latest design memorandums
 - design details and plan notes along with data that are consistent with that shown in the final bridge and road plans
 - Contractor’s designer shall prepare the required geotechnical bridge and roadway plan sheets that clearly detail any geotechnical requirements outlined in the reports
- All soil test boring logs and laboratory testing results shall be provided electronically in both a .PDF file and as a gINT® file. In addition, all CPT and DMT data shall be provided electronically as both a .PDF file and as an Excel® (2010) spreadsheet following the order provided in Sections 6.2.2 and 6.2.3 of the SCDOT GDM, respectively. As indicated in Section 6.4.1, the results of shear wave velocity (Vs)

testing shall be presented as a graph in .PDF and Excel® (2010) spreadsheet formats including the data table.

3.4.8 Final Seismic Design Summary Report

- In the report, describe the seismic design approach for the bridge. The report shall include the following at a minimum:
 - A project description
 - Seismic design specification references
 - Seismic design criteria and objectives, including Operational Classification, design earthquake(s), ADRS, and SDC
 - Expected service performance and damage levels
 - Seismic design approach and strategy to achieve the required seismic performance; including seismic load path, potential plastic hinges, and any unique aspects of the project
 - Soil shear strength loss (SSL) assessment and any geotechnical hazards that may impact the bridge
 - Seismic analysis/design software used in the project (include discussions regarding the structural and geotechnical modeling aspects for the bridge)
 - Mass participation achieved, including longitudinal and transverse fundamental periods
 - Tabulated results from the design earthquake(s) tension and compression models and pushover models as applicable for variations of SSL and scour scenarios if applicable, including the following at a minimum:
 - displacement demand vs. displacement capacity
 - yield displacement
 - ductility demand check
 - ductility capacity check
 - Seismic detailing, including design of cap support length, hinge region detailing, shear keys, anchor bolts, bearings, wingwalls, backwalls, shear walls, etc.
 - Discussion of approved seismic design variances and justifications
 - Seismic hazard mitigation if applicable

3.4.9 Bridge Load Rating Documentation

- See Chapter 20 of the SCDOT Load Rating Guidance Document for load rating deliverables.

3.5 RFC Submittal Packages

- RFC submittal packages shall be submitted once all comments have been closed on all submittals for each phase (ex. Preliminary/ROW/Final/RFC) of

a segment or structure and a request for RFC plans has been issued by the Construction Office.

- After all comments are closed, no changes shall be made to the design deliverables before providing a RFC submittal package.
- Insert RFC Plans into plan folders as detailed in the SCDOT Plan Preparation Guide and the SCDOT Bridge Design Manual if not submitted with digital signatures.
- The Engineer of Record, a licensed and registered Professional Engineer in the State of South Carolina, shall sign and seal all RFC plans and reports. RFC documents shall be original documents if not submitted with digital signatures.
- RFC documents submitted with digital signatures shall comply with the SCDOT Digital Signatures Manual.
- A complete set of design calculations shall be included with the RFC submittal package and at any point prior when requested by SCDOT.

3.6 Revisions to RFC Plans and Reports

- After providing a RFC submittal package, any subsequent changes to the RFC plans and reports will be considered revisions. Revisions shall be denoted as detailed in the design manuals or as directed by the Department.

3.7 Traffic Management Plan

- The Contractor shall submit a Traffic Management Plan in accordance with the document, Rule on Work Zone Safety and Mobility: Implementation, Maintenance, and Safety Guidelines.
- All components of the Transportation Management Plan shall be submitted for review by SCDOT and must be approved before any construction activities can begin.

3.8 Paving Plan

- The Contractor shall submit a Paving Plan identifying layout and configuration of slip form paving widths, geometry and location of hand pours.
- Provide any necessary detail/standard drawings for construction of concrete pavement or asphalt pavement to SCDOT for review and approval.

3.9 Foundation Installation Plan Submittals

- Prepare Drilled Foundation Installation Plans (DFIP) and/or Pile Installation Plans (PIP) in accordance with the SCDOT Standard Specifications for Highway Construction, 2007 Edition. Submit all foundation installation plan submittals electronically. The Contractor's designer shall review and approve all DFIP and PIP (including pile driving criteria) prior to submitting

the foundation installation plans to SCDOT for review and acceptance. SCDOT will review the foundation installation plans and provide either acceptance or comments. The Contractor's designer shall resolve all comments prior to re-submittal to SCDOT. SCDOT will review the DFIP and/or the PIP only to verify that the specifications have been addressed. The Contractor shall provide a supplement to the report containing the actual field conditions encountered and as-built foundation data and information after construction of the foundations is complete.

3.10 Foundation Testing Submittals

- Submit to SCDOT an electronic copy of all applicable foundation testing reports for all bridge and roadway structures to include but not limited to Shaft Load Test and Pile Driving Analyzer test reports.

3.11 Hazardous Materials Testing Submittals

- The Contractor shall submit to SCDOT:
 - Results of any hazardous materials analytical testing of sampled or excavated subsurface materials as outlined in the Agreement.
 - Manifests of all hazardous materials requiring disposal.

3.12 Shop Plans

- Submit shop plans, as defined by the Standard Specifications for Highway Construction, to the Contractor's designer for review and approval. Route all approved shop plans to SCDOT for review and distribution. Provide shop plan submittals that meet the criteria of Subsection 725.1.1 of the Standard Specifications for Highway Construction. After reviewing the plans, SCDOT will either distribute the plans or provide comments. If comments are provided, the Contractor's designer shall review the comments prior to resubmitting to the SCDOT for further review. The Contractor's designer shall stamp the shop plans "approved" prior to submittal to SCDOT. SCDOT will stamp and distribute the plans. Do not commence fabrication and construction/erection until after SCDOT distributes the plans. The responsible engineer, registered as a Professional Engineer in the State of South Carolina, shall seal, sign, and date all design calculations and shop plans.

3.13 Working Drawings

- Submit working drawings and design calculations, as defined by the Standard Specifications for Highway Construction, to the Contractor's designer for review and approval. Route all approved working drawings and design calculations to the SCDOT for review and distribution. Provide working drawings and design calculation submittals that meet the criteria of

Subsection 725.1.2 of the Standard Specifications for Highway Construction. SCDOT will review the drawings and calculations and either provide acceptance of the drawings as prepared or provide comments. If comments are provided, the Contractor's designer shall review the comments prior to resubmittal to SCDOT for further review. The Contractor's designer shall stamp the working drawings and design calculations "approved" prior to submittal to SCDOT. SCDOT will stamp and distribute the drawings and calculations. Do not commence construction/erection until after SCDOT distributes the drawings and calculations. The responsible engineer, registered as a Professional Engineer in the State of South Carolina, shall seal, sign, and date all design calculations and working drawings. SCDOT will review the working drawings and design calculations only to verify that the specifications have been addressed.

3.14 NPDES Submittals

- The appropriate level of design and review shall be completed prior to any NPDES package submittal.

3.15 Revised Permit Drawings

- Contractor shall provide to SCDOT revised permit drawings that show ROW limits that differ from those in the approved USACE Permit.

3.16 Coordinated Traffic Signal System Deliverables

- Preliminary Assessment Report which includes the Development of Base System Timing Plans
- Draft Effectiveness Study
- Final Effectiveness Study

3.17 Plans for Utility Work Performed In-contract by Contractor

3.17.1 City of Columbia

- See Exhibit 7 and Attachment B for plan submittal requirements.

3.17.2 Department of Administration

- See Exhibit 4d – Part 6 –ITS for plan submittal requirements.

3.18 As-Built Plans

- Provide a copy of the as-built plans in accordance with the Manual of Instruction for the Preparation of As-built Plans.

- Provide a final copy of all electronic data as noted in section 3.4.1 and 3.4.2 which captures all changes to electronic data since the final plans submittal.
- A complete as-built set of signing plans, including SignCAD copies of all layouts, shall be submitted to the SCDOT as directed by the Director of Traffic Engineering at the conclusion of the project.
- ITS - The CONTRACTOR shall provide as-built plans to include: directional bore logs, conduit offsets every 500', GPS data of device locations, all service and pull boxes, power metering points, mid span and reel end splices (three complete sets). An electronic copy of all GPS data will be turned in at the same time as the as-built plans. Allocation drawing and Fiber Trak data entry will be furnished by the Department as part of the integration.
- Provide As-Built “red-lined” signal plans to the District Signal Shop after the signal work is completed.
- Provide as-built load rating(s), updated as needed, with as-built plans if there have been any changes to the bridge(s) that affect the load rating. If no changes are made that affect the load rating(s), provide a certification signed by the engineer of record stating the original load rating(s) remain accurate for the bridge(s).

SPECIAL PROVISIONS

(1) SECTION 101: CAROLINA CROSSROADS MANAGEMENT ROLES:

In recognition of the specially established contract management structure for the Carolina Crossroads Project. The roles of the SCDOT OFFICIALS shown in the table below where mentioned in the contract documents are re-assigned to the appropriate Carolina Crossroads Official shown.

The Quality Assurance Program (QAP) is comprised of two major components. The acceptance program includes quality acceptance (QA) performed by the Contractor’s Independent Quality Firm (IQF) and Owner Verification (OV) performed by SCDOT or SCDOT’s Owner Verification Firm (OVF). The QAP allows the use of IQF’s QA as part of the acceptance program when QA results are verified by OV results performed by SCDOT or SCDOT’s Owner Verification Firm (OVF). The independent assurance program consists of Independent Assurance (IA) performed by SCDOT to verify equipment and personnel performing testing as part of the acceptance program. Contractor-performed Quality Control (QC) cannot be used as part of the acceptance program and is not subject to the IA program. The OV, IA and referee functions will only be performed by an SCDOT group or an entity contracted directly by SCDOT. There are six functions identified in the QAP and shown below.

- Contractor Production
- Contractor Quality Control (QC)
- IQF Quality Acceptance (QA)
- SCDOT Owner Verification (OV)
- SCDOT Independent Assurance (IA)
- SCDOT Referee

The role of the SCDOT Resident Construction Engineer RCE is now split between the Contractor’s IQF and SCDOT’s OVF. References to the SCDOT RCE involving QA of workmanship and materials as defined in the QAP for Carolina Crossroads will be the responsibility of the Contractor’s Independent Quality Manager (IQM). References to the SCDOT RCE involving contractual decisions that do not obligate SCDOT to time or money will be the responsibility of the SCDOT’s OVF–Resident Engineer (OV-RE).

(2) SECTION 101: STANDARD DRAWINGS:

The Bidders are hereby advised that this project shall be constructed using the Current Standard Drawings with all updates effective at the time of this letting. For this design-build project, the time of the letting is the most recent Standard Highway Letting that occurred on or before the Final RFP release date. The Standard Drawings are available for download at <https://www.scdot.org/business/standard-drawings.aspx>. All drawings that are updated are labeled with their effective letting date in red.

All references in the plans, standard specifications, supplemental specifications, supplemental technical specifications or special provisions to drawings under the previous numbering system (prior to 2007) are hereby updated to the new drawing numbers. Refer to sheets 000-205-01 through 000-205-07 to find new drawing numbers when looking for references to older drawing numbers. “Old sheet numbers” are also visible on the website when using the full set of drawings “current” search and are sortable by clicking the header over the appropriate column on the results page. Be aware that some older drawings now span over multiple pages due to detailing changes.

(3) SECTION 102: IMMINENT STANDARD DRAWINGS

On the Standard Drawings search page, entre status of Imminent with other fields blank to see a list of upcoming Standard Drawings and their corresponding effective let date. Imminent drawings may be used at any time they are available if approved by the Construction Manager for Mega Projects. Follow procedure shown in imminent drawings when noted in this section.

Imminent Drawings will be made available as soon as they are signed.

(4) SECTION 102: STANDARD DRAWING ERRATA:

The Bidders are hereby advised that the following note changes apply to the published Standard Drawings.

On sheet **000-205-05**, add the following information under the columns below:

OLD DRAWING NAME	NEW DRAWING NAME
720-905-01 to 720-905-05	720-901-01 to 720-993-32

On sheet **605-005-05 (ver 1-1-2013)**, replace entire text of General Note #4 with the following text:

4. The square footage of sign panels attached to 2½” x 2½” 12 gauge sign support secured to a 3” x 3” 7 gauge breakaway anchor shall not exceed 20 square feet.

On sheet **610-005-00 (ver 5-1-18)** added the following definition to Note 1 of Flagging Operations section:

SIDE ROAD FLAGGER – This flagger is stationed on an intersecting side road and controls the side road traffic entering into the roadway where the work activity area is located.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

On sheet 610-005-20 (ver 5-1-18) added Note 5 :

5. When the work proceeds through a “STOP sign controlled “SIDE ROAD” intersection continue the work operations through the intersection to a specific location point within the “DEPARTURE LANE” no less than 300 FT to 500 FT beyond the limits of the intersection to allow the work train and all portions of the lane closure to clear the intersection.

On sheet 610-005-20 (ver 5-1-18)

Added dimension “300’-500” for the work activity area after the intersection.

On sheet 610-005-30 (ver 5-1-18) added Note 5 :

5. When the work proceeds through a “STOP SIGN CONTROLLED“ intersection continue the work operations through the intersection to a specific location point within the “DEPARTURE LANE” no less than 300 FT to 500 FT beyond the limits of the intersection to allow the work train and all portions of the lane closure to clear the intersection.

On sheet 610-005-40 (ver 5-1-18) added Note 5 :

5. When the work proceeds through a “TRAFFIC SIGNAL CONTROLLED“ intersection continue the work operations through the intersection to a specific location point within the “DEPARTURE LANE” no less than 300 FT to 500 FT beyond the limits of the intersection to allow the work train and all portions of the lane closure to clear the intersection.

On sheet 610-005-50 (ver 5-1-18) added Note 5 :

5. When the work proceeds through a “TRAFFIC SIGNAL CONTROLLED“ intersection continue the work operations through the intersection to a specific location point within the “DEPARTURE LANE” no less than 300 FT to 500 FT beyond the limits of the intersection to allow the work train and all portions of the lane closure to clear the intersection.

On sheet 610-005-60 (ver 5-1-18) Title block changed :

Title block now reads “Flagging Operations – Work Zones Beginning @ Intersections with Two-Lane Two-Way Roadways – Departure Lane.”

On sheet 610-005-70 (ver 5-1-18) Title block changed :

Title block now reads “Flagging Operations – Work Zones Terminating @ Intersections with Two-Lane Two-Way Roadways – Approach Lane.”

On sheet 610-005-80 (ver 5-1-18) Note 6 revised:

6. Dependent upon the location of the work zone in the “Departure Lane” or the “Approach Lane” of the two-lane two-way road, when the work zone progresses to a location that requires conversion from this flagging operation traffic control setup to a standard flagging operation traffic control setup or vice versa, comply with the requirements of Standard Drawing No. 610-005-60 or Standard Drawing No. 610-005-70 as necessary regarding these conversions.

On sheet 610-005-90 (ver 5-1-18) Note 6 revised:

6. Dependent upon the location of the work zone in the “Departure Lane” or the “Approach Lane” of the two-lane two-way road, when the work zone progresses to a location that requires conversion

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

from this flagging operation traffic control setup to a standard flagging operation traffic control setup or vice versa, comply with the requirements of Standard Drawing No. 610-005-60 or Standard Drawing No. 610-005-70 as necessary regarding these conversions.

In Section 714-000 – Pipe Culverts (Permanent) (ver January 2011)

Delete and replace all references to P1 Biaxial Geogrid with B4 Geogrid on all Drawings within this Section of the Standard Drawings.

On sheet 720-305-00 (ver May 2008), delete the entire note directly above main detail:

On sheet 720-405-00 (ver May 2009) Detail 2 replace dimension 2'-6" maximum with:

2'-6" minimum

On sheet 720-901-01 (ver Feb 2015) replace note 5.04 with:

5.04 When a mid-block crossing is required, consider mid-block staggered crossing (720-955-41) to encourage eye contact between the pedestrian and the oncoming traffic. Always angle the stagger so that the pedestrian travels through the refuge facing the oncoming traffic.

On sheet 722-305-00 (ver May 2010) Detail 4 replace note "French Drain see note 21" with:

French Drain see note 4.5.

On sheet 722-305-00 (ver May 2010) table 722-305A, 4th column, change the following:

Delete (SF)

Replace text "up to 36" with "up to 3'X3' "

Replace text "larger than 36" with "larger than 3'X3' "

On sheet 722-305-00 (ver May 2010) change general note 3.3 2nd sentence & Detail 4:

Place Class 2 Type C Geotextile for Erosion Control under riprap as specified in SCDOT Standard Specification.

On sheet 804-105-00 (ver May 2008) Title Block replace text "Rirap (Bridge End)" with:

Riprap (Bridge End)

On sheet 804-105-00 (ver May 2008) Change Note 2: Geotextile Pay Item to:

8048210 Geotextile for Erosion Control under riprap (Class 2) Type C.... SY

On sheet 804-205-00 (ver May 2009) Change Note 2: Geotextile Pay Item to:

8048210 Geotextile for Erosion Control under riprap (Class 2) Type C.... SY

On sheet 804-305-01 (ver Jul 2017) Change Note 4: Geotextile Pay Item to:

8048210 Geotextile for Erosion Control under riprap (Class 2) Type C.... SY

On sheet 804-305-02 (ver Jul 2017) Change Section A: Geotextile Note to:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Geotextile for Erosion Control under riprap (Class 2) Type C

On sheet 804-310-00 (ver Jul 2017) Change Note 3: Geotextile Pay Item to:

8048210 Geotextile for Erosion Control under riprap (Class 2) Type C.... SY

On sheet 805-001-01 Jan 2019 version, replace note 25.06 with:

25.06 FOR PROJECTS THAT SPECIFY PREMASH DEVICES (W-BEAM, TYPE T, TBBC, TYPE B, ETC.) INSTALL W-BEAM RAIL HEIGHT AT 29" +/- 1" (PREVIOUSLY NOTED AS 27.75" +3"/-0".)

On sheet 805-220-00 (ver Jul 2018) replace note 5:

FOR SITES WITH BRIDGES, BOLT GUARDRAIL TO BRIDGE PARAPET AS REQUIRED IN STIFFNESS TRANSITION, AND HOLD FACE OF GUARDRAIL POSITION (TYPICALLY 5'-3" FROM FACE OF CURB) THROUGH STIFFNESS TRANSITION. Make any necessary adjustments to face of guardrail within the LONGITUDINAL BARRIER. INSTALL END TREATMENT so that impact head is beyond the back of sidewalk.

On website, drawings between 805-500-00 and 805-779-99 are reserved as PREMASH standards. Do not value engineer or otherwise substitute PREMASH devices in any location where it has been determined that MASH devices fit and are specified. If MASH devices do not fit site condition, install PREMASH only upon approval by the Resident Engineer. Note that during MASH implementation, some PREMASH details may be published with old drawing numbering and a cover sheet that addresses drawing and pay item changes.

On sheets 805-860-xx (05, 10, 15, 20, 24, 30) (ver Jan 2016):

All references to toe drain details are revised to refer to drawing 805-875-10 (correct all notes pointing to drawings 805-895-00 or other incorrect drawing numbers).

(5) SECTION 103: BONDS AND INSURANCE:

Bonds and Insurance consists of all Bonds and Insurance required of the contractor. A maximum allowable amount of 2.0% of the total contract amount will be paid on the first pay estimate after work begins. If there is a remaining amount of the lump sum price for Bonds and Insurance after payments are made according to the limit above, then the remaining amount will be paid on the final estimate.

If special insurance is required by the contract provisions, such as railroad or coastal insurance, no maximum limit will apply to this bid item.

Item No.	Pay Item	Unit
1032010	BONDS AND INSURANCE	LS

(6) SECTION 104: CONTRACT CHANGES:

A. PURPOSE

To define and establish the responsibilities and procedures for processing Requests for Information (RFI), Design Change Notifications (DCN), Field Change Notifications (FCN), and Contract Change Requests (CCR) after the execution of the contract for SCDOT design-build projects. These actions require review and either acceptance or approval prior to implementation. The timely review and response to Contractor/SCDOT submittals by the appropriate project officials is imperative to maximize the benefits of design-build contracting and reduce project delays.

B. DEFINITIONS

The following are the four different types of Contract Requests (CR).

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

1. **Request for Information (RFI):** A written request, typically by the Contractor to SCDOT, requesting clarifications or interpretations of the contract, plans, and specifications, including input required to resolve discrepancies. An RFI can also be used to obtain concurrence for construction means and methods that differ from traditional practice. In addition, SCDOT may initiate an RFI to the Contractor requesting clarification of means and methods.
2. **Design Change Notification (DCN):** A written notification by the Contractor that states changes within the contract requirements are needed to the design after the plans have been released for construction. These changes to the design will be subject to the same level of quality assurance and quality control reviews as the original design, including SCDOT and Contractor review, respectively.
3. **Field Change Notification (FCN):** A written notification by the Contractor to SCDOT to construct the project differently than shown in the Released for Construction (RFC) plans, but still within the contract requirements and SCDOT accepted practices. FCNs typically capture minor changes that do not require review and approval from the Engineer of Record (EOR), but will be noted on the as-built plans.
4. **Contract Change Request (CCR):** A written request to change contract requirements or deviate from SCDOT accepted practices. CCRs shall document all changes to contract time and price. CCRs, if approved, will be processed individually or in groups via a Change Order in SiteManager.

C. PROCEDURES

1. General
 - a. Utilize SCDOT CR Form for all RFIs, DCNs, FCNs, and CCRs.
 - b. Contractor will submit a form to the SCDOT RCE via ProjectWise, or vice versa, for all RFIs, DCNs, FCNs, and CCRs. FHWA shall be copied on Projects of Division Interest (PoDI).
 - c. A sequential project-specific numbering system should be used for each CR submittal (e.g. CR-001).
 - d. The RCE shall track the review progress for all documents in real time in a single spreadsheet in ProjectWise. This spreadsheet shall include:
 - 1) The CR number
 - 2) The duration agreed to for review completion
 - 3) The status of each submittal in each update
 - 4) The party that is currently responsible for reviewing and responding
 - e. Initial review times for each of these documents will be 10 business days, unless otherwise agreed upon by the RCE and the Contractor. Review times may be extended if SCDOT's initial comments are not addressed. The Contractor and RCE are responsible for ensuring all parties fully understand the magnitude of potential schedule impacts of each submittal.
 - f. If an approved CCR impacts contract time or price, it should be documented expeditiously as a Change Order in SiteManager.
 - g. If a CR requires revision, it shall supersede all previous submittals and therefore must include all necessary attachments. A new CR form shall be submitted with the original identification number and applicable revision number (e.g. CR-001-R1).

2. Requests for Information

An RFI may be initiated by the Contractor or SCDOT. RFIs that are internal to the Design-Build Team, i.e. Contractor, should not be tracked by SCDOT.

a. RFIs submitted by the Contractor to SCDOT:

- 1) All RFIs are to be submitted by the Contractor's Project Manager to the RCE using Form XXX. The form and supporting documentation shall be placed in a designated

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

ProjectWise folder that the Contractor, RCE, DOC's Office, and Preconstruction may access. A Bluebeam session may be initiated by SCDOT if multiple reviewers are involved.

- 2) Upon receipt, discipline experts for the Contractor, EOR, or SCDOT may discuss details independently, but any conclusions and supporting information must be documented in a formal response by the RCE utilizing the original CR Form.
- b. RFIs sent by SCDOT to the Contractor:
 - 1) The RCE will develop the RFI in coordination with SCDOT staff as needed using Form XXX. The RCE will provide all RFIs via a designated ProjectWise folder that the Contractor, RCE, DOC's office, and Preconstruction may access.
 - 2) The Contractor will submit the response and supporting information to the RCE in this same ProjectWise folder.
 - 3) The RCE will review the Contractor's response and determine whether a separate notification or request is needed.
3. Design Change Notification
 - a. The Contractor shall notify the RCE of any design changes being considered on any documents or plans that have been released for construction by utilizing CR Form. Supporting the form should be all revised documents that clearly identify all proposed changes. The form and supporting documentation shall be placed in a designated ProjectWise folder that the Contractor, RCE, DOC's Office, and Preconstruction may access. A Bluebeam session may be initiated by SCDOT if multiple reviewers are involved.
 - b. Once the DCN is reviewed and if all comments are resolved, the RCE will accept the DCN using CR Form and submit to the Contractor along with all necessary attachments. If any SCDOT comments cannot be resolved in accordance with the contract requirements, the DCN will be rejected, and SCDOT will provide an explanation for the rejection and comment on the favorability as a CCR.
 - c. Digital and hard copies of revised plans that will become revised RFC plans shall be submitted by the Contractor following the procedures outlined in the contract and as agreed to for the original RFC plans. The Contractor shall provide revised Released for Construction (RFC) plans after SCDOT accepts the DCN.
 - d. The Contractor is to ensure that all parties affected by any design changes and/or plan revisions receive revised RFC plans, i.e. utility companies, subcontractors, sub-consultants, railroad company representatives, etc.
4. Field Change Notification
 - a. The Contractor shall notify the RCE of any FCN under consideration utilizing CR Form.
 - b. The Contractor shall clearly identify all proposed changes on CR Form and attach all supporting documents and details needed for SCDOT to fully understand the proposed changes. A Bluebeam session may be initiated by SCDOT if multiple reviewers are involved.
 - c. If the FCN does not require any design changes to the RFC plans, does not violate the contract requirements, and in the opinion of the RCE, complies with SCDOT accepted practices, the RCE will accept the FCN.
 - d. If the FCN requires design changes to the RFC plans, the FCN will be rejected and SCDOT will provide an explanation for the rejection and the need to resubmit as a DCN.
 - e. If the FCN violates the contract requirements, the FCN will be rejected and SCDOT will provide an explanation for the rejection and comment on the favorability as a CCR.
 - f. If the FCN does not comply with SCDOT accepted practices, the FCN may be accepted or rejected. If rejected, SCDOT will provide an explanation for the rejection and comment on the favorability as a CCR.

- g. The Contractor shall document all SCDOT accepted FCNs as redlines in the as-built plans.
5. Contract Change Request
- a. CCRs sent by Contractor to the SCDOT:
 - 1) The Contractor shall submit a CCR to the RCE using Form XXX with sufficient description, information, calculations, justification, and any impacts to cost and time for SCDOT to make an informed decision. The Contractor shall provide the RCE with additional supporting documents or justification upon request.
 - 2) The RCE is to review the submittal and seek input from SCDOT discipline experts as needed. A Bluebeam session may be initiated by SCDOT if multiple reviewers are involved.
 - 3) Upon concurrence with SCDOT and FHWA staff, the RCE will approve or reject any CCR using CR Form.
 - 4) If the CCR is approved, including any changes to cost and time, a SiteManager Change Order will be issued to the Contractor for review and concurrence.
 - 5) If the CCR is determined to be necessary to the project but cost and time cannot be agreed upon, SCDOT reserves the right to direct the Contractor to perform the work under Force Account Procedures in lieu of rejection. Upon completion of the changed work, a SiteManager Change Order will follow for contractor review and concurrence.
 - b. CCRs sent by SCDOT to the Contractor:
 - 1) The RCE shall submit a CCR to the Contractor using Form XXX with sufficient description and information for the Contractor to respond.
 - 2) The Contractor must respond with sufficient information, calculations, and justification for all cost and time changes.
 - 3) The RCE is to review the response and seek input from SCDOT discipline experts as needed. A Bluebeam session may be initiated by SCDOT if multiple reviewers are involved.
 - 4) Upon concurrence with SCDOT and FHWA staff, the RCE will approve or reject any cost or time changes associated with the CCR using CR Form.
 - 5) If the CCR is approved, including any changes to cost and time, a SiteManager Change Order will be issued to the Contractor for review and concurrence.
 - 6) If the CCR is determined to be necessary to the project but cost and time cannot be agreed upon, SCDOT reserves the right to direct the Contractor to perform the work under Force Account Procedures in lieu of rejection. Upon completion of the changed work, a SiteManager Change Order will follow for contractor review and concurrence.

(7) SECTION 105: CROSS SLOPE VERIFICATION:

A. DESCRIPTION

The cross slopes of the roadway are to be constructed as described in the RFP and within the tolerances listed in this specification. It is the responsibility of the Contractor to ensure that the roadway cross slopes meet the requirements of the RFP and this specification.

B. CALCULATING CROSS SLOPE

The cross slope of a travel lane in the cross section view is the ratio or percent based on the change in horizontal compared to the change in vertical. Cross slope is calculated by subtracting the difference in elevation between the two edges of the travel lane and dividing this difference by the lane width. For example, a typical 48:1 Normal Crown (NC) pavement cross slope is calculated as -0.0208 ft/ft or -2.08% for a 12 foot lane.

C. ACCEPTABLE TOLERANCES OF CROSS SLOPES:

Tolerance Level 1 for cross slopes shall be ± 0.00174 ft/ft of the design cross slopes.

Tolerance Level 2 for cross slopes shall be ± 0.00348 ft/ft of the design cross slopes.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

D. FINAL PAVEMENT CROSS SLOPE VERIFICATION:

Verify cross slopes along all interstate mainline lanes.

Calculate the pavement cross slopes after placing the final surface (prior to OGFC if specified). Verify that the correct cross slopes have been obtained. Elevation data is to be collected at the edge of each travel lane perpendicular to the roadway centerline at the following locations:

6. Even 100-foot stations in tangent sections and even 50-foot stations in curves
7. Begin and end of superelevation, flat cross slopes within superelevation transition, remove crown, begin and end of maximum superelevation, PC's, and PT's
8. Cross slopes on begin and end of bridges

Submit to the RCE a summary of the final pavement measurements. The data submitted for review shall include the following information for each travel lane:

Station	LETL Elevation	RETL Elevation	Lane Width	Calculated X-slope	Plan X- slope	Deviation	Tolerance Level
---------	-------------------	-------------------	---------------	-----------------------	------------------	-----------	--------------------

9. Station
10. Left Edge of Travel Lane Elevation (LETL) in ft
11. Right Edge of Travel Lane Elevation (RETL) in ft
12. Lane width in ft
13. Calculated cross slope in ft/ft
14. Plan cross slope in ft/ft
15. Deviation between calculated cross slope and plan cross slope
16. Tolerance Level (1, 2, or Out of tolerance)

Areas outside of **Tolerance Level 1 and within Tolerance Level 2** will be subject to review by the RCE and the DCE. The DCE will either require corrective measures at the Contractor's expense, or will provide a memo of acceptance with a pay reduction.

Areas outside of **Tolerance Level 2** will be subject to review by the DCE and the Director of Construction. The Director of Construction will either require corrective measures at the Contractor's expense, or will provide a memo of acceptance with a pay reduction.

E. PERFORMANCE ADJUSTMENTS:

For Final Pavement Measurements within **Tolerance Level 1**, no pay adjustment will be made.

For Final Pavement Measurements outside of **Tolerance Level 1**, the DCE will either require corrective measures at the Contractor's expense, or will provide a memo of acceptance with a pay reduction of \$200/100' for each travel lane over the length of the section. The section length(s) will be determined as follows:

The beginning of each section will be halfway between the first point outside Tolerance Level 1 and the previous (adjacent) point within full compliance. The end of each section will be halfway between the last point outside Tolerance Level 1 and the adjacent point which is within full compliance. The minimum section length will be 100 feet. This amount will be deducted from monies due for pavement mixes.

For Final Pavement Measurements outside of **Tolerance Level 2**, the DOC will either require corrective measures at the Contractor's expense, or will provide a memo of acceptance with a pay reduction of \$300/100' for each travel lane over the length of the section. (This pay reduction will be in addition to the \$200 pay reduction for being outside of Tolerance Level 1.) The section length(s) will be determined as follows:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The beginning of each section will be halfway between the first point outside Tolerance Level 2 and the previous (adjacent) point within Tolerance Level 2. The end of each section will be halfway between the last point outside Tolerance Level 2 and the adjacent point which is within Tolerance Level 2. The minimum section length will be 100 feet. This amount will be deducted from monies due for HMA mixes.

F. AS-BUILT PLAN SHEETS AND ELECTRONIC DELIVERABLES

After any Performance Adjustments have been settled, provide final pavement cross sections on full size (22" x 36") plans sheets and submit to the RCE for inclusion in the as-built plans. Include the final disposition of cross slopes outside of the specified tolerances (i.e. corrected survey data, memo of acceptance from DOC, etc).

The as-built construction plans should include the following:

1. Control points, horizontal alignment, and stationing used to construct the project
2. Superelevation with horizontal curve data
3. Cross sections as defined in the Final Pavement Cross Slope Verification section
4. Corresponding electronic files on CD-ROM or DVD to include all files used to develop the survey for the project, all files used to verify the cross slopes for the project, superelevation calculations, and any MicroStation CADD files that pertain to the cross sections

(8) SECTION 105: EXTENDED JOB SITE OVERHEAD

Delete Paragraph 1, item D of Subsection 105.16.5 of the Standard Specifications and replace it with the following:

D. EXTENDED JOB SITE OVERHEAD AS DETERMINED BY THE FORMULA SET FORTH BELOW:

$$D = A \times C / B$$

Where: A = Original Contract Amount

B = Original Contract Time

C = 6%

D = Extended Jobsite Overhead rate per calendar day for compensable delays

(9) SECTION 105: BRIDGE INSPECTION ACCESS

A. DESCRIPTION:

The contractor shall cooperate with and allow SCDOT personnel or their designee's access to all existing bridges within the project limits to perform periodic bridge condition evaluations. The purpose is to ensure that SCDOT complies with National Bridge Inspection Standards (NBIS) requirements. These evaluations may include routine, underwater, fracture critical, or special inspections. The Department or their designee shall give two weeks' notice to the Contractor of planned inspections. The Contractor shall schedule construction activities to allow unimpeded access to such bridges during NBIS Inspections.

The contractor shall notify the Construction Manager for Mega Projects four weeks prior to opening any new, widened, stage constructed or rehabilitated bridge to traffic to allow an initial bridge condition evaluation, an inventory inspection and an inventory underwater inspection (if needed). The contractor shall perform all repairs necessary to correct deficiencies noted in the condition evaluation report. Bridges, to include temporary bridges, should not be opened to traffic prior to completion of the NBIS Inspection(s).

(10) SECTION 106: SOURCE OF PRODUCTION OF IRON AND STEEL PRODUCTS:

Delete Paragraph 1 of Subsection 106.11 of the Standard Specifications and replace it with the following:

“On this project where steel or iron materials are used, all manufacturing processes for iron and steel material, including tie wire for reinforcing steel, must occur in the United States in accordance with 23 CFR Section 635.410(b)(1)(ii). This requirement includes the application of coating for these materials. Coating includes all processes that protect or enhance the value of the material to which the coating is applied.”

(11) SECTION 106: SOURCE OF SUPPLY AND QUALITY OF MATERIALS:

Delete Paragraph 3 of Subsection 106.1 of the Standard Specifications and replace it with the following:

“When materials, components, or elements that are not specifically covered in the Standard Specifications, Supplemental Specifications, Supplemental Technical Specifications, or Project Special Provisions are proposed to be incorporated into the work, submit to the Construction Manager for Mega Projects a specification covering the proposed material, component, or element for review and acceptance prior to incorporating it into the work. Ensure that such materials, components, or elements meet the requirements of the AASHTO specifications that were effective as of the date of the Final RFP. If the materials, components, or elements are not covered in the AASHTO specifications, ensure that they meet the requirements of the ASTM specifications that were effective as of the date of the Final RFP. Submission of a specification for a material, component, or element not covered in the Standard Specifications, Supplemental Specifications, Supplemental Technical Specifications, or Project Special Provisions does not guarantee approval for use on the Project.”

(12) SECTION 106: PLANT/FABRICATOR INSPECTION:

Subsection 106.4, **Plant Inspection**, of the Standard Specifications shall be amended with the following:

Change the subsection title to **Plant/Fabricator Inspection** and add the following sentence after the first sentence:

“Provide 14 calendar days written notice to the Materials and Research Engineer prior to beginning fabrication work for Department projects.”

(13) SECTION 106: QUALIFIED PRODUCT LISTINGS:

All references to “Approval Sheet” or “Approval Policy” are to be replaced with “Qualified Products Listings (QPL)” and “Qualified Products Policies (QPP)” respectively. This change includes all references in the SCDOT Standard Drawings, SCDOT Standard Specifications, SCDOT Supplemental Specifications, SCDOT Special Provisions, SCDOT Supplemental Technical Specifications, SCDOT Internet and Intranet websites, and all other documents produced by SCDOT.

(14) SECTION 106: SOUTH CAROLINA MINING ACT:

The South Carolina Mining Act Supplemental Specification dated March 20, 2003 is hereby modified as follows:

Paragraph 9 is hereby deleted and replaced with the following:

The deputy secretary for engineering, or his duly appointed representative, will make a final inspection of the reclaimed area and keep a permanent record of his approval thereof. A map or sketch providing the location and approximate acreage of each pit used on the project will be provided to the resident construction engineer for inclusion in the final plans.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The last paragraph is hereby deleted and replaced with the following:

The contractor shall comply with the provisions of the plan that are applicable to the project as determined by the engineer. Seeding or other work necessary to comply with the plan on pits furnished by the contractor shall be at the expense of the contractor. Seeding shall be in accordance with SC-M-810 (latest version) which can be found at <https://www.scdot.org/business/road-technical-specs.aspx>.

(15) SECTION 107: PROJECT BULLETIN BOARDS:

In accordance with the Required Contract Provisions Federal-Aid Construction Contracts Section II, Item 3, Part d, add the following:

Single Location Projects – On projects in which work is performed at a single location (such as bridge replacement projects, two-lane to five-lane widening projects, etc.), mount the project bulletin board in a permanent location within the project limits so that it is visible and accessible at all times.

Multiple Location Projects – On projects in which work is being performed or has the capability of being performed at multiple locations (such as resurfacing projects, pavement marking projects, etc.), display a portable bulletin board with at least one of the prime contractor's work crews. If the prime contractor is not performing work, display the portable bulletin board with at least one of the subcontractor's work crews. Display the portable bulletin board in a location and a manner that is acceptable to the RCE. Notify the RCE and all subcontractors as to the location of the portable bulletin board. On resurfacing projects, mount an additional project bulletin board in a permanent location at the asphalt plant supplying asphalt mix to the project so that it is visible and accessible at all times.

(16) SECTION 107: FAIR LABOR STANDARDS ACT OF 1938, AS AMENDED:

Attention is directed to this Federal Legislation, which has been enacted into law. The contractor will be responsible for carrying out all of the provisions of this legislation, which may affect this contract.

(17) SECTION 107: CARGO PREFERENCE ACT REQUIREMENTS:

A. Use of United States-flag vessels – General Provisions:

"(1) Pursuant to Pub. L. 664 (43 U.S.C. 1241(b)) at least 50 percent of any equipment, materials or commodities procured, contracted for or otherwise obtained with funds granted, guaranteed, loaned, or advanced by the U.S. Government under this agreement, and which may be transported by ocean vessel, shall be transported on privately owned United States-flag commercial vessels, if available.

"(2) Within 20 days following the date of loading for shipments originating within the United States or within 30 working days following the date of loading for shipments originating outside the United States, a legible copy of a rated, 'on-board' commercial ocean bill-of-lading in English for each shipment of cargo described in paragraph (A)(1) of this section shall be furnished to both the Contracting Officer (through the prime contractor in the case of subcontractor bills-of-lading) and to the Division of National Cargo, Office of Market Development, Maritime Administration, Washington, DC 20590."

B. Use of United States-flag vessels - The contractor agrees:

"(1) To utilize privately owned United States-flag commercial vessels to ship at least 50 percent of the gross tonnage (computed separately for dry bulk carriers, dry cargo liners, and tankers) involved, whenever shipping any equipment, material, or commodities pursuant to this contract, to the extent such vessels are available at fair and reasonable rates for United States-flag commercial vessels.

"(2) To furnish within 20 days following the date of loading for shipments originating within the United States or within 30 working days following the date of loading for shipments originating outside the United States, a legible copy of a rated, 'on-board' commercial ocean bill-of-lading in

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

English for each shipment of cargo described in paragraph (B)(1) of this section to both the Contracting Officer (through the prime contractor in the case of subcontractor bills-of-lading) and to the Division of National Cargo, Office of Market Development, Maritime Administration, Washington, DC 20590.

"(3) To insert the substance of the provisions of this clause in all subcontracts issued pursuant to this contract."

(18) SECTION 107: CONTRACT PROVISION TO REQUIRE CERTIFICATION AND COMPLIANCE CONCERNING ILLEGAL ALIENS:

By submission of this bid, the bidder as the prime contractor does hereby agree:

- A. to certify its compliance with the requirements of Chapter 14 of Title 8 of the S.C. Code of Laws regarding Unauthorized Aliens and Public Employment;
- B. to provide SCDOT with any documents required to establish such compliance upon request; and
- C. to register and participate and require agreement from subcontractors and sub-subcontractors to register and participate in the federal work authorization program to verify the employment authorization of all new employees, or to employ only workers who supply the documents required pursuant to S.C. Code 8-14-20(B)(2).

(19) SECTION 107: IRAN DIVESTMENT ACT:

By submission of this bid/proposal, the bidder/proposer as the prime contractor/consultant/vendor does hereby certify his compliance to the following:

- A. **CERTIFICATION:** (a) The Iran Divestment Act List is a list published pursuant to Section 11-57-310 that identifies persons engaged in investment activities in Iran. Section 11-57-310 requires the government to provide a person ninety days (90) written notice before he is included on the list. The following representation, which is required by Section 11-57-330(A), is a material inducement for the SCDOT to award a contract to you. (b) By signing your Offer, you certify that, as of the date you sign, you are not on the then-current version of the Iran Divestment Act List. (c) You must notify the SCDOT immediately if, at any time before posting of a final statement of award. You are added to the Iran Divestment Act List.
- B. **ONGOING OBLIGATIONS:** (a) You must notify SCDOT immediately if, at any time during the contract term, you are added to the Iran Divestment Act List. (b) Consistent with Section 11-57-330(B), you shall not contract with any person to perform a part of the Work, if, at the time you enter into the subcontract, that person is on the then-current version of the Iran Divestment Act List.
- C. **OPTION TO RENEW RESTRICTION:** Contractor acknowledges that, unless excused by Section 11-57-320, if the contractor is on the then-current Iran Divestment Act List as of the date of any contract renewal, the renewal will be void ab initio.

(20) SECTION 107: APPLICATION OF DAVIS-BACON AND RELATED ACTS TO INDEPENDENT TRUCK DRIVERS AND MISCELLANEOUS CONSTRUCTION ACTIVITIES:

June 13, 1990

- A. The Davis-Bacon and Related Acts apply when:
 - 1. A Contractor or Subcontractor hires a trucking firm or fleet of trucks to haul materials from a plant, pit, or quarry, which has been established specifically to serve (or nearly so) a particular project or projects covered by Davis-Bacon and Related Acts.
 - 2. A Contractor or Subcontractor hires a trucking firm or fleet of trucks to haul material from a non-commercial stockpile or non-commercial storage site outside the limits of the project to the project site.
 - 3. A Contractor or Subcontractor hires a trucking firm or fleet of trucks to haul excavated materials away from a Davis-Bacon covered project.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

4. A contractor or Subcontractor rents or leases equipment with an operator to perform work as called for under a Davis-Bacon construction contract.
5. A common carrier is used for the transportation of materials from an exclusive material supply facility to fulfill the specific need of a construction contract.

The fleet owner is not considered a Subcontractor with regard to the 70% subcontracting limitations and would not have to be approved as a Subcontractor. However, payrolls must be submitted by truck fleet owner covering the truck drivers, and all requirements such as predetermined wages, overtime, etc., are applicable. Legitimate owner-operators (truck owner driving his own truck) must appear on the payroll by name and notation "truck Owner Operator" with no hours, etc. shown.

B. The Davis-Bacon and Related Acts do not apply when:

1. A Contractor or Subcontractor hires a trucking firm or fleet of trucks to haul materials from a commercial plant, pit, or quarry which had previously been established for commercial use and regularly sell materials to the general public.
2. A Contractor or Subcontractor hires a trucking firm or fleet of trucks to haul materials from an established commercial plant, pit, or quarry to a stockpile outside the limits of the project.
3. Bona fide owner-operators of trucks, who are independent contractors, use their own equipment to haul materials to or from or on a Davis-Bacon covered project. (One man-One truck)

The fleet owner is not considered a Subcontractor with regard to the 70% subcontracting limitation and would not have to be approved as a Subcontractor.

(21) SECTION 107: REQUIREMENTS FOR FEDERAL AID CONTRACTS WHICH AFFECT SUBCONTRACTORS, DBE HAULERS, MATERIAL SUPPLIERS AND VENDORS:

March 1, 2010

- A. The contractor's attention is directed to the requirements of Section I.2 in Form FHWA 1273 that is included in your contract documents as the Supplemental Specification "Required Contract Provisions Federal-Aid Construction Contracts". Section I.2 requires that "the contractor shall insert in each subcontract all of the stipulations contained in the Required Contract Provisions". This requirement also applies to lower tier subcontractors or purchase orders. These provisions must be physically included in your subcontracts. A reference to the applicable specification will not suffice.
- B. The contractor's attention is directed to the requirements of the Supplemental Specification "Standard Federal Equal Employment Opportunity Construction Contract Specifications". Section 2 requires that the provisions of this specification must be physically included in each subcontract with a value of \$10,000 or greater.
- C. The contractor's attention is directed to the requirements of the Equal Employment Opportunity Performance certifications in the Proposal Form Certifications and Signatures section of the contract. Section 1 concerning Equal Employment Opportunity must be physically included in each subcontract.
- D. Prior to the issuance of formal approval, all DBE subcontracts must include a signed copy of the subcontract agreement between the Prime Contractor and the DBE Subcontractor.
- E. Prior to the issuance of formal approval, of any DBE haulers, the contractor must submit a signed copy of the hauling agreement.
- F. The contractor's attention is further directed that sections 1, 2, 3, 8, 9, and 11 of Form FHWA 1273, or Sections 1, 3, 8 and 10 of Form 1316 (for Appalachian contracts only) must be physically included in each purchase agreement with a value of \$10,000 or greater with a vendor or supplier, and in open-end contracts where individual purchases are less than \$10,000 but where the total purchases accumulate to \$100,000 or more per year.

(22) SECTION 107: DISADVANTAGE BUSINESS ENTERPRISE (DBE) CAROLINA CROSSROADS SPECIAL REQUIREMENTS:

In addition to the DBE requirements shown in the contract documents, the PROPOSER shall implement the items listed below.

- In regards to special considerations due to Federal, State and local guidelines regarding COVID-19 and the restriction of large gatherings, the proposer is required to establish three one-week sessions for firms certified as DBEs to meet one-on-one in-person with the proposer beginning 30 days after project award. These sessions will afford DBE firms the ability to meet and offer their services for sub-contracting opportunities. This will be in lieu of the Department's DBE outreach sessions usually held within 30 days of when the short-listed firms are identified. It is recommended the proposer hold additional in-person sessions within 90 days prior to the beginning of construction.
- Proposer is required to identify an experienced point-of-contact responsible for administrative matters related to the DBE program. The Project Manager will be the point of contact to address issues related to DBE program compliance.
- Proposer will make key managers and field supervisors available for a one-time SCDOT provided training sessions concerning DBE program compliance. Newly hired managers and field supervisors shall attend a training session within 90 days of hire for this project.

The SCDOT Minority & Small Business Affairs DBE Mega Project Support, Technical Assistance and Compliance team is available to assist with the successful implementation and understanding DBE program requirements and meeting the project's DBE goal.

(23) SECTION 107: LATE DISCOVERY OF ARCHAEOLOGICAL/HISTORICAL REMAINS ON FEDERAL AID PROJECTS AND APPROVAL OF DESIGNATED BORROW PITS:

August 7, 1991

A. LATE DISCOVERY OF ARCHAEOLOGICAL/HISTORICAL REMAINS ON FEDERAL AID PROJECTS

1. Responsibilities:

The Contractor and subcontractors must notify their workers to watch for the presence of any prehistoric or historic remains, including but not limited to arrowheads, pottery, ceramics, flakes, bones, graves, gravestones, or brick concentrations. If any such cultural remains are encountered, the Resident Construction Engineer shall be immediately notified and all work in the vicinity of the discovered materials or site shall cease until the Department's Staff Archaeologist or the State Highway Engineer directs otherwise.

2. Applicability:

This provision covers all areas of ground disturbance resulting from this federal - aid contract, including but not limited to road construction, Department designated borrow pits, Contractor furnished borrow pits, and/or staging areas.

3. Cost Reimbursement and Time Delays:

Any extra work required by A(1) above within the project right of way or on Department designated borrow pits (see below) will be paid for in accordance with Subsection 104.05 of the Standard Specifications. Extra contract time may be provided under Subsection 108.06 of the Standard Specifications for archaeological work within the project right of way or on designated borrow pits.

NOTE: On Contractor furnished borrow pits the contractor is not entitled to any additional time or money for delay on impact resulting from A(1) above or for extra work required by A(1) above. Therefore, contractors may wish to retain professional archaeological services to

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

better ensure that borrow pit areas are cleared of archaeological/historical remains prior to use on Federal aid projects.

B. APPROVAL OF DESIGNATED BORROW PITS ON FEDERAL AID PROJECTS (PLANT SITES WHICH QUALIFY AS COMMERCIAL ARE NOT INCLUDED)

In instances where the Department specifically designates the location of borrow pits on project plans or in contract specifications for use on a Federal aid project, an archaeological survey will be performed by Department archaeologists prior to award of contract.

This provision also applies to designated disposal sites, staging areas, haul roads, and job site field offices.

(24) SECTION 107: SPECIFIC EQUAL EMPLOYMENT OPPORTUNITY RESPONSIBILITIES TRAINING SPECIAL PROVISIONS:

August 20, 1975
Revised April 1, 2004

This Training Special Provision supersedes Subparagraph 7b of the Special Provision entitled "Specific Equal Employment Opportunity Responsibilities", (Attachment 1), and is in implementation of 23 U.S.C. 140(a).

As part of the contractor's equal employment opportunity affirmative action program, training shall be provided as follows:

The contractor shall provide on-the-job training aimed at developing full journeymen in the type of trade or job classification involved.

THE NUMBER OF TRAINEES TO BE TRAINED UNDER THE SPECIAL PROVISION WILL BE.

Road – 11 (at 520 hours each).
Bridge – 6 (at 1040 hours each).

In the event that a Contractor subcontracts a portion of the contract work, he shall determine how many, if any, of the trainees are to be trained by the subcontractor, provided however, that the Contractor shall retain the primary responsibility for meeting the training requirements imposed by this Special Provision. The Contractor shall also insure that this training Special Provision is made applicable to such subcontract. Where feasible, 25 percent of apprentices or trainees in each occupation shall be in their first year of apprenticeship or training.

The number of trainees shall be distributed among the work classifications on the basis of the Contractor's needs and the availability of journeymen in the various classifications within a reasonable area of recruitment. Prior to commencing construction, the Contractor shall submit to the State Highway Agency for approval the number of trainees to be trained in each selected classification and training program to be used. Furthermore, the Contractor shall specify the starting time for training in each of the classifications. The Contractor will be credited for each trainee employed by him on the contract work who is currently enrolled or becomes enrolled in an approved program.

Training and upgrading of minorities and women toward journeyman status is a primary objective of this Training Special Provision. Accordingly, the Contractor shall make every effort to enroll minority trainees and women (e.g., by conducting systematic and direct recruitment through public and private sources likely to yield minority and women (trainees)) to the extent that such persons are available within a reasonable area of recruitment. The contractor will be responsible for demonstrating the steps that he has taken in pursuance thereof, prior to a determination as to whether the Contractor is in compliance with this Training Special Provision. This training commitment is not intended, and shall

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

not be used, to discriminate against any applicant for training, whether a member of a minority group or not.

No employee shall be employed as a trainee in any classification in which he has successfully completed a training course leading to journeyman status or in which he has been employed as a journeyman. The Contractor should satisfy this requirement by including appropriate questions in the employee application or by other suitable means. Regardless of the method used the Contractor's records should document the findings in each case.

The minimum length and type of training for each classification will be as established in the training program selected by the Contractor and approved by the State Highway Agency and the Federal Highway Administration. The State Highway Agency and the Federal Highway Administration shall approve a program if it is reasonably calculated to meet the equal employment opportunity obligations of the Contractor and to qualify the average trainee for journeyman status in the classification concerned by the end of the training period. Furthermore, apprenticeship programs registered with the U.S. Department of Labor, Bureau of Apprenticeship and Training, or with a State apprenticeship agency recognized by the Bureau and training programs approved but not necessarily sponsored by the U.S. Department of Labor, Manpower Administration, Bureau of Apprenticeship and Training shall also be considered acceptable provided it is being administered in a manner consistent with the equal employment obligations of Federal Aid highway construction contracts. Approval or acceptance of a training program shall be obtained from the State prior to commencing work on the classification covered by the program. It is the intention of these provisions that training is to be provided in the construction crafts rather than clerk-typists or secretarial-type positions. Training is permissible in lower level management positions such as office engineers, estimators, timekeepers, etc., where the training is oriented toward construction applications. Training in the laborer classification may be permitted provided that significant and meaningful training is provided and approved by the division office. Some off-site training is permissible as long as the training is an integral part of an approved training program and does not comprise a significant part of the overall training.

Except as otherwise noted below, the cost for the training will be included in the contract price. There will be no reimbursement given by SCDOT for the hours of training that are provided on this project. However, a "Statement of Completed Training" will be required at the end of the project. The fact that the cost of the training must be included in the contract does not prohibit the contractor from receiving training program funds from other sources, if he so desires. Training hours may be counted if training is done off-site where the contractor does one or more of the following and the trainees are concurrently employed on a Federal Aid project: contributes to the cost of the training, provides the instruction to the trainee, or pays the trainee's wages during the off-site training period.

The training requirement will not be considered completed by the Contractor if either the failure to provide the required training, or the failure to hire the trainee as a journeyman, is caused by the Contractor and evidences a lack of good faith on the part of the Contractor in meeting the requirements of this Training Special Provision. It is normally expected that a trainee will begin his training on the project as soon as feasible after start of work the skill involved and remain on the project as long as training opportunities exist in his work classification or until he has completed his training program. It is not required that all trainees be on board for the entire length of the contract. A Contractor will have fulfilled his responsibilities under this Training Special Provision if he has provided acceptable training to the number of trainees specified. The number trained shall be determined on the basis of the total number enrolled on the contract for a significant period.

Trainees will be paid at least 60 percent of the appropriate minimum journeyman's rate specified in the contract for the first half of the training period, 75 percent for the third quarter of the training period, and 90 percent for the last quarter of the training period, unless apprentices or trainees in an approved existing program are enrolled as trainees on this project. In that case, the appropriate rates approved by the Departments of Labor or Transportation in connection with the existing program shall apply to all trainees being trained for the same classification who are covered by this Training Special Provision.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The Contractor shall furnish the trainee a copy of the program he will follow in providing the training. The Contractor shall provide each trainee with a certification showing the type and length of training satisfactorily completed.

The Contractor will provide for the maintenance of records and furnish periodic reports documenting his performance under this Training Special Provision, as required under the SCDOT approved training program.

Meeting the On-the-job Training Requirements or Making Good Faith Efforts to Meet the On-the-job Training Requirements. It is the Contractor's responsibility to meet the On-the-job Training Requirements stated in this section. Failure to meet the requirement or demonstrate good faith efforts, as determined by SCDOT, to meet the requirement may result in any one or more of the following sanctions:

- A. Withholding monthly progress payments;
- B. Declaring the Contractor in default pursuant to Section 108.10 of the Standard Specifications and terminating the contract;
- C. Disqualifying the Contractor from bidding pursuant to Regulation 63-306, Volume 25A, of the S. C. Code of Laws; and/or
- D. Requiring the Contractor to obtain On-the-job Training participation on future contracts to the extent the Contractor failed to meet or use good faith efforts to meet the On-the-job training contract requirement.

(25) SECTION 107: MONITORING OF CONSTR.-RELATED EARTHBORNE VIBRATIONS:

July 8, 2015

A. DESCRIPTION

The project construction will generate vibrations that will travel through the earth, which will subsequently be received or "sensed" by nearby structures and inhabitants. Specific procedures that will generate earthborne vibrations during bridge and roadway construction include (but are not limited to) the installation of piles, earthquake drains, shoring walls, general foundation construction, and vibratory compaction of unclassified or borrow excavation. To mitigate the risk of vibration-related damage to nearby structures, this specification outlines the Contractor's responsibility for performing a program of pre-construction condition assessment and vibration monitoring during construction.

This specification is based, in part, on AASHTO R 8-96 (2004) *Standard Recommended Practice for Evaluation of Transportation-Related Earthborne Vibrations*. As discussed in AASHTO R 8-96 (2004), humans respond to a much broader range of vibration frequencies and intensities than structures. Intrusive vibration levels can annoy humans at much lower intensities than levels considered critical for structures. Thus, occupants of adjacent properties may perceive that the construction-induced vibrations may present risk to their structures. The recommended safe vibration limits are intended to mitigate the risk of structure damage, and more specifically, reduce the development of "threshold cracks" or cosmetic cracking. Such cracks may appear at lower vibration levels than the level at which architectural or minor structural damage would be expected to occur.

B. PRE-CONSTRUCTION CONDITION ASSESSMENT

The Contractor shall retain a geotechnical engineering firm to perform a pre-construction condition assessment to document the conditions of nearby buildings and other sensitive nearby structures prior to the beginning of construction. The assessment shall be performed on all properties adjacent to the project site and any other properties as directed by the Engineer. The assessment shall include any structures within 300 feet of any vibration inducing construction activity. The assessment should include video and photographic documentation of all exteriors and interiors, and installation of crack monitors on cracks that might propagate due to construction vibrations. All documentation of existing building conditions and information concerning the type and location of crack monitors shall be presented to the Engineer in a report prior to construction.

C. CRACK MONITORING DURING CONSTRUCTION

During all construction, the Contractor shall perform periodic readings of the crack monitors that were installed during the pre-construction condition assessment. All readings shall be provided to the Engineer within 48 hours of taking the reading. Provided that the crack readings confirm that vibrations are not contributing to increasing the crack width, the crack monitors may be read once per week. More frequent readings may be directed by the Engineer during activities that are expected to have greater earthborne vibrations (e.g., pile driving). If the crack readings suggest that vibrations from the project site are contributing to crack width, then the Contractor shall immediately notify the Engineer and review those activities that are generating the earthborne vibrations. The Contractor and his or her geotechnical firm shall then submit a detailed plan for repair, perform the repair at no cost to the Department and develop and submit for review a revised construction plan to address the vibration problems and minimize further damage and complaints.

D. VIBRATION MONITORING DURING CONSTRUCTION

1. Procedure - The Contractor shall monitor vibrations at no less than eight locations at each specific site of construction activity along the perimeter of the project during all foundation and embankment construction activities. The locations shall be selected by the Contractor based on the location of the construction activities and their relative position to nearby offsite structures. Prior to construction, a plan of the monitoring locations shall be submitted to the Engineer for acceptance. The locations of the vibration monitors shall be adjusted during construction with acceptance by the Engineer. The vibration monitors shall be established at the site so that background vibrations may be determined prior to beginning foundation or embankment construction. The sensitivity range of the seismograph shall be selected so that the recording is initiated below the maximum allowable particle velocity shown in Figure 1 and extends above the highest expected intensity. Specific activities of the vibration source shall be indexed in time to allow correlation with the arrivals on the vibration
2. Project Vibration Criteria - The maximum allowable particle velocity is shown in Figure 1. If the data from the monitors indicate that vibrations are exceeding the established criteria, then the Contractor shall immediately notify the Engineer and suspend those activities which are generating the earthborne vibrations, until the Contractor and his or her geotechnical firm have developed a revised construction plan to resolve the problem. The problem shall be resolved at no additional cost to the Department.
3. Instrumentation – The vibration monitors shall consist of digital seismographs that display the particle velocities and associated frequencies plotted against the criteria for this project (i.e., Figure 1). Each seismograph shall contain geophones with response capability in three mutually perpendicular axes or components: one vertical and two horizontal (radial and transverse). The frequency response of the geophones shall be linear from at least 4 Hz to more than 200 Hz. The sensitivity shall range from less than 0.02 in/sec to more than 5.0 in/sec. The BlastMate III by InstanTel is one type of seismograph that is suitable for this project.
4. Calibration and Instrument Use - The Contractor shall field calibrate the vibration monitors before the start of each recording period. The transducer shall be positioned with the longitudinal axis toward the vibration source. Transducers must be adequately coupled with the ground. Operation of all vibration monitors shall be in accordance with the instrument manufacturer's instructions and recommendations. Vibration records shall be collected in waveform plot or strip chart plot. The peak vector sum of the particle velocity in longitudinal, transverse, and vertical planes shall be shown along with the respective dominant or principle frequencies. The highest recorded particle velocity (i.e., the vector sum of the three orthogonal directions), when indexed to a particle vibration event, shall be reported as the peak particle velocity. The recorded peak particle velocity shall be compared to criteria appropriate for the subject of concern.
5. Complaints - In the event of a complaint, the Contractor shall immediately contact the Engineer and review those construction activities that are inducing vibrations into the earth. The Contractor shall prepare a report documenting all relevant data such as the time and date presented in the complaint, a description of the construction activities during the subject time/date, data from the monitoring instruments for the subject time/date, complaint

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

information and a description (including photographs, if possible) of the alleged damage. The Contractor and his or her geotechnical firm shall then submit a detailed plan for repair, perform the repair at no cost to the Department and develop and submit for review a revised construction plan to address the vibration problems and minimize further damage and complaints.

E. METHOD OF MEASUREMENT

In addition to the pre-construction condition assessment report, the Contractor shall also provide monthly reports containing the results of the crack monitors and vibration monitors during those activities that generate earthborne vibrations, including (but not limited to) ground improvement and foundation construction. The reports shall document that the Contractor is providing the work described by this specification.

F. BASIS OF PAYMENT

Payment shall be made in proportion with the percent of the project that is complete. Final payment of the remaining lump sum balance shall be made when vibration monitoring is complete as approved by the Engineer. Payments shall be made under:

Item No.	Pay Item	Pay Unit
1075001	MONITORING OF CONSTRUCTION-RELATED EARTHBORNE VIBRATIONS	LS

Figure 1 - Vibration Criteria (adapted from AASHTO R8-96)

(26) SECTION 107: COMMUNITY AND PUBLIC RELATIONS SUPPORT PLAN:

A. SCDOT ROLES AND RESPONSIBILITIES

SCDOT will be the Public Involvement lead on this Project and be responsible for directing the public relations and communications efforts. Unless noted otherwise elsewhere in this Contract, SCDOT's responsibilities include:

1. Develop and manage a comprehensive Communications Plan.
2. Develop and maintain Project brand and other identifying materials including logo and templates to be used in outreach efforts during Project. The Project logo will also be used on all official materials. The Project logo shall not be used by the Contractor on any promotional materials without SCDOT Approval.
3. Develop, maintain, and update Project website.
4. Solicit and administer advertisements and media announcements.
5. Review and distribute all communications materials.
6. Manage and maintain 24-hour project hotline.
7. Manage and maintain a dedicated Project e-mail account.
8. Develop and maintain a stakeholder database.
9. Log, respond to, and document stakeholder and public comment, contact and inquiry.
10. Manage and maintain project social media.
11. Manage and plan public information meetings.
12. Review and approve the Community and Public Relations Support Plan on a quarterly basis.

B. CONTRACTOR ROLES AND RESPONSIBILITIES

The Contractor's Community and Public Relations Support Plan shall include full details and descriptions for how the Contractor will fulfill the following responsibilities to assist SCDOT with public relations and communications efforts. SCDOT will review and approve the Plan on a quarterly basis.

1. **Point of Contact:** The Contractor shall designate a communications point of contact to be available 24/7/365 to support the identification of community relations issues and rapid resolution of conflicts as well as provide content support for press releases and public notifications.
2. **Activity Reports:** The Contractor shall provide activity reports to notify SCDOT of construction activities as listed below. The Contractor shall provide a written activity report to SCDOT on a weekly basis consisting of a four week look-ahead to assist the program for community awareness and to avoid major congestion or other site-specific conflicts. Any unplanned changes to the look-ahead need to be presented immediately without waiting for the next week's update.
 - a. Construction activities may include but are not limited to: start of construction, major traffic shifts, lane closures, road closures, ramp closures, detours, earthwork activities, night work, utility interruptions, general construction progress updates, travel impacts for holiday traffic and special events as defined in subsection 601.1.3 of SCDOT's Standard Specifications for Highway Construction (2007), and Project completion.
 - b. Construction activity reports shall use visuals to clearly explain concepts and provide accurate and current information. Visuals must be of high enough quality for utilization on the Project website and social media platforms.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

3. **Project Coordination Meeting:** The Contractor shall hold an initial project coordination meeting with SCDOT no later than 30 days after the Notice to Proceed to discuss public involvement and construction impacts to the public. This information will be used by the Contractor to create its Community and Public Relations Support Plan and by SCDOT to create SCDOT's Communications Plan.
4. **Project Kick-off Public Involvement Meeting:** At least 90 days prior to the start of construction, the Contractor shall collaborate with SCDOT to hold a public information meeting during which Contractor shall introduce the stakeholders to the Project, describe anticipated phasing and, to the extent possible, planned closures, discuss methods that will be used to communicate traffic issues and lane and/or ramp closures, discuss the Project website, and assist SCDOT in answering questions about the Project.
5. **Community Meetings and Events:** The Contractor shall attend, present at, and provide displays for no less than 12 public meetings and events per year. The contractor shall submit to SCDOT no less than ten recommended events to attend. SCDOT shall provide an additional list of six recommended events. The Contractor shall coordinate with SCDOT to develop the final list of events. SCDOT shall manage and plan logistics for the agreed upon list of events. In support of these events, the Contractor shall be prepared to make the following commitments:
 - a. The Contractor's personnel shall wear project apparel and be prepared to speak in order to inform the public of Project progress and to entertain comments, address concerns and answer questions from the community. Events may include but are not limited to neighborhood celebrations and fairs, public/business organization/agency events, and homeowners' association meetings.
 - b. The Contractor shall create a Public Information Meeting (PIM) Kit. The kit must include two table drapes with Project logo, two 10" X10" pop-up tents, one 6' folding table, 4 brochure stands, and project shirts. The Contractor shall maintain the PIM kit in good condition throughout the duration of the Project and replace items if worn or broken. The Contractor Public Involvement Team shall wear Project branded clothing to all community events.
 - c. The Contractor shall not represent the Project at any event without the prior approval from SCDOT. Should the Contractor wish to participate in an event not on the agreed-upon list, the Contractor shall submit a written request that includes an event plan that includes a description of the event and activities, staffing, anticipated stakeholder groups in attendance, materials/quantities, and displays to be used at least 45 days in advance of the event.
 - d. Following each event, the Contractor shall be prepared to assist in drafting a summary report and provide event attendee numbers, attendee comments, event logistical details, and high-resolution photographs of the booth and interaction with stakeholders that can be utilized on the Project website and on social media platforms.
6. **SCDOT Meetings:** On a weekly basis, the Contractor shall schedule and meet with the SCDOT team. The Contractor shall draft and send SCDOT a meeting agenda for review 24 hours prior to meeting and prepare a summary of the meeting discussion and list of action items to submit to SCDOT within 48 hours after the meeting.
 - a. Meeting information shall include a three week look ahead of planned construction activities and a traffic impacts. The Contractor shall also be prepared to discuss key stakeholder issues and action items, and ensure that any other subjects of community relations and community impact from construction operations are on the agenda including, but not limited to, traffic control phasing, graphic illustrations, and project pictures, etc., are included on the agenda of each construction progress meeting.
 - b. The Contractor shall include supporting graphics for all information presented so that SCDOT may review, approved and/or request changes at that time.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

7. **Public Alerts Drafts:** The Contractor shall use templates designed by SCDOT to draft construction alerts, advertisements and media announcements that SCDOT will approve and publish.
 - a. The Contractor shall provide drafts of no less than ten days prior to the start of the impact to allow enough time for approvals and distribution.
 - b. When unplanned conditions occur with less than ten days' notice, the Contractor shall deliver electronic alerts to SCDOT within an hour of the occurrence.
8. **Stakeholder Engagement:** SCDOT will build and maintain a stakeholder database and stakeholder management tool. The Contractor will be provided access to the stakeholder management database for reference and shall submit requested additions or changes to the database on a weekly basis.
 - a. The Contractor shall forward to SCDOT any general stakeholder inquiries and recommended responses to the inquiry within 24 hours of receipt. SCDOT will review responses and respond to the inquiry directly with the Contractor copied.
 - b. The Contractor shall forward to SCDOT any inquiries from Elected Officials or key stakeholders identified in the database and recommended responses to the inquiry within 2 hours.
 - c. The Contractor shall not distribute any information to stakeholders, respond to stakeholder inquiries, or schedule stakeholder events or meetings without prior approval of SCDOT.
9. **Communications Material:** The Contractor shall provide information for SCDOT's use in direct mailers, flyers, and other promotional materials when requested.
10. **Media Relations:** SCDOT is primarily responsible for interfacing with the media. The Contractor shall direct all questions from the media to SCDOT. The Contractor shall provide project details and visuals for media releases and advisories when requested.
 - a. The Contractor shall coordinate with SCDOT to determine a location at or near the site designated for media. This location shall be at a safe-enough distance for media to take photographs or video of project work without the need to engage with the Contractor's personnel or interrupt project work. Should the media arrive at the designated media location unannounced, the Contractor's personnel shall not engage with them and shall immediately notify SCDOT by phone and/or text messaging. If the media arrives at any other location at or near the project site, they should first be courteously escorted to the designated media location and then SCDOT shall be notified of their presence by phone and/or text messaging.
 - b. The Contractor shall establish procedures and processes to facilitate media tours of the site. The Contractor shall not allow media on the site unless accompanied by SCDOT. Media tour facilitation may include providing water, personal protective equipment (PPE), safety escorts, lighting and safe locations for media during live shots or on-site interviews.
 - c. The Contractor shall not speak to the media about the project without prior authorization from SCDOT. Unauthorized communication by Contractor staff with any member of the media or elected officials may require the Contractor to replace its employee with an alternate staff member possessing equivalent experience.
11. **Crisis Communications:** The Contractor's Public Relations and Communications Support Plan shall include a Crisis Communication Plan that shall set forth the Contractor's rapid response protocols for a crisis that affects the project, which includes, but is not limited to, emergencies, accidents and incidents within the Project right of way, a sudden, catastrophic event that materially impairs the ability to use the freeway, materially and adversely impacts construction activities, requires lane closures of an unusual or more frequent nature than normal; requires a full shutdown of the roadways within the Project limits; or otherwise creates a health or safety hazard.
 - a. The Crisis Communication Plan shall identify an individual and an alternate who must be available and can be contacted 24/7/365 when an emergency is identified. The Contractor

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

shall make emergency and alternate telephone numbers available to the Project team. The Crisis Communications Plan must include the following commitments:

- 1) The Contractor's process for integrating its crisis communications protocols into the Crisis Communications Plan to be outlined in the comprehensive Communication Plan that SCDOT will provide to the Contractor.
 - 2) Within thirty (30) minutes of becoming informed of the crisis, the Contractor shall notify SCDOT via phone call, text messaging, and email of any emergency affecting the Project, that occurred within the Project right of way, or required unexpected roadway closures.
 - 3) The Crisis Communications Plan must include the Contractor's plan to support SCDOT's dissemination of information on an expedited basis to motorists, to the media and through social media to make the public aware of the crisis within 90 minutes of the event.
 - 4) The Contractor shall prepare a written report documenting the incident and submit it to the designated person(s) identified in SCDOT's Crisis Communications Plan within 24 hours of the incident. The report shall document the time, location, participants and cause of the incident, as well as the Contractor's action (or intended action) to resolve the incident.
12. **Special Events:** Subsection 601.1.3 of SCDOT's Standard Specifications for Highway Construction (2007) identifies special events as events generating excessive traffic as determined by SCDOT. The Contractor shall maintain an up-to-date list of special events occurring in the Midlands region with a specific focus on events occurring within the local jurisdictions and coordinate closures to accommodate the event traffic. Coordination shall include contacting event manager(s) to provide specific Project information relevant to event planning and execution, including potential alternate routes and parking. The Contractor shall document this exchange of information and provide this information to SCDOT on a weekly basis.
13. **511 Notification:** The Contractor shall provide SCDOT and the SCDOT Assistant Traffic Management Engineer with a contact list of the Contractor's communication staff and their roles. A designated Contractor representative shall be responsible for contacting 511 to inform the operators of construction activities scheduled each day. Contractor shall place the 511 calls prior to construction activities starting, during construction (should changes occur due to early completion, weather, an incident at the site, etc.) and when the activities have been completed and traffic is no longer affected. When sending the information to 511, the Contractor representative shall also send the updates to the SCDOT Project team via email. If changes occur and 511 is not notified but receives information that is not consistent with the updates, the 511 operator will contact the first person listed on the Contractor's contact list to verify the alert. The 511 information website and contact information shall be included on social media accounts, the Carolina Crossroads Website, in press releases and in all distributed public information materials.
14. **Photography/Videography:** Contractor shall photograph and collect video of construction activities as needed to convey the state of the Project in materials disseminated to the Stakeholders. Photos and videos must be of adequate quality to be printed electronically and streamed. Examples of activities to photograph and video include signage installation, major earthwork, bridge construction, paving, and other milestones. At a minimum, the Contractor shall provide twenty-five (25) photos and five (5) minute-long videos each month that can be utilized on the project website and social media platforms.

(27) SECTION 108: PARTNERING:

A. COVENANT OF GOOD FAITH AND FAIR DEALING

This Contract imposes an obligation of good faith and fair dealing in its performance and enforcement.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The CONTRACTOR and Department, with a positive commitment to honesty and integrity, agree to the following mutual duties:

1. Each will function within the laws and statutes applicable to their duties and responsibilities.
2. Each will avoid hindering the other's performance.
3. Each will proceed to fulfill its obligations diligently.
4. Each will cooperate in the common endeavor of the Contract.

B. PARTNERING

The Department encourages the foundation of cohesive partnering with the CONTRACTOR and its principle subcontractors and suppliers. This partnering is not a legal partnership as defined by South Carolina law. Partnering will be structured to draw on the strengths of each organization to identify and achieve reciprocal goals. The objectives are effective and efficient contract performance and completion within budget, on schedule, and in accordance with the Contract.

The establishment of a partnering charter will not change the legal relationship of the parties to the contract nor relieve either party from any of the terms of the Contract. Any cost associated with effectuating partnering will be agreed to by the Department and the CONTRACTOR and will be shared equally between them.

(28) SECTION 109: FUEL ADJUSTMENT INDEXES:

No fuel adjustment will be made on this Project.

(29) SECTION 109: REFERENCES TO UNIT PRICING:

Except listed below, any references in the contract documents to unit price, measurement, and payment, are typical references for design-bid-build contracts and are not applicable to the extent they effect payment on Design-Build contracts. The Design-Build contractor's schedule of values shall provide sufficient detail to compare work progress to the contractor's schedule and determine appropriate periodic payments.

The following Special Provisions contain unit rate and payment information specifically applicable to this Design-Build contract:

SECTION 401: HOT MIX ASPHALT (HMA) QUALITY ASSURANCE

SECTION 401: HOT-MIX ASPHALT RIDEABILITY

SECTION 401: FULL DEPTH ASPHALT PAVEMENT PATCHING

SECTION 413: COLD CENTRAL PLANT RECYCLING MATERIALS

SECTION 501 ROLLER COMPACTED CONCRETE

SECTION 503: PORTLAND CEMENT CONCRETE PAVEMENT UNIT COST

SECTION 701: NON-CONFORMING CONCRETE

SECTION 806: REPAIR EXISTING CONTROL OF ACCESS FENCE

(30) SECTION 202: REMOVAL OF EXISTING GUARDRAIL:

Section 202.4.4.3 applies on this project.

(31) SECTION 202: RECLAIMING EXISTING ROADWAY:

A. DESCRIPTION

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

This work consists of the restoration of paved areas. These areas are typically shown as hatched areas on the plans when outside the construction limits.

B. MATERIALS

None

C. CONSTRUCTION REQUIREMENTS

1. Asphalt Pavement with Earth Base: Remove and dispose of areas of pavement shown as hatched areas on the plans. Grade the area to properly drain. Seed the area in accordance with Section 810.
2. Asphalt Pavement with Stone Base: Remove and dispose of areas of pavement and base shown as hatched areas on the plans. Grade the area to properly drain. Seed the area in accordance with Section 810.
3. Earth roadway or Bituminous Surfacing with Earth Base: Scarify existing areas of roadway. Grade the area to properly drain. Seed the area in accordance with Section 810.
4. Bituminous Surfacing with Stone Base: Remove and dispose of areas of pavement and base shown as hatched areas on the plans. Grade the area to properly drain. Seed the area in accordance with Section 810.

Suitable materials may be used for embankment construction on the project. In the event that removed materials are used for embankment construction a corresponding deduction in Unclassified Excavation will be made by the Resident Construction Engineer.

D. MEASUREMENT

Removed asphalt pavement greater than 2 inches in depth will be measured by the square yard. Removed bituminous surfacing with stone base will be measured by the cubic yard. Removed stone base will be measured by the cubic yard. Scarified areas will not be measured for payment.

E. PAYMENT

Removed asphalt pavement which is greater than 2 inches in depth will be paid at the unit price bid for Removal and Disposal of Existing Asphalt Pavement. Removed bituminous surfacing with stone base will be paid for at the unit price bid for Unclassified Excavation. Removed stone base will be paid for at the unit bid price for Unclassified Excavation. No payment will be made for scarifying earth roadway or bituminous surfacing with earth base. No separate or additional payment will be made for grading necessary to obtain proper drainage.

(32) SECTION 202: STAGED REMOVAL OF EXISTING BRIDGES:

For existing bridges that will be removed in stages, maintain stability of the existing structure at all times while traffic is on or passing under the bridge. At a minimum, replace all tie rods after removal of any slab sections and maintain bracing on the existing piles at all times while traffic is on or passing under the bridge.

(33) SECTION 203: BORROW EXCAVATION:

Delete paragraph 1 of Subsection 203.2.1.8 of the Standard Specifications and replace it with the following:

1. Borrow consists of material required for the construction of embankments or for other portions of the work where the elevation of the existing subgrade is less than the subgrade elevation required on the Plans or directed by the RCE. When sufficient material is available entirely within the right-of-way, the work is covered by the item Unclassified Excavation and the material shall meet the material requirements of Borrow Excavation in this subsection. When it is necessary to bring material from outside of the right-of-way, the work is covered by the item Borrow Excavation, and the material shall also meet the requirements for Borrow Excavation in this subsection. The material requirements of this subsection apply to all

material used in the work regardless of its origin. The requirements of this subsection are not applicable to in situ subgrade material.

(34) SECTION 203: BORROW EXCAVATION (FOR SHOULDERS):

This work shall consist of satisfactory placement of all materials necessary to bring the shoulder grade to within 2 inches of the final pavement edge grade. The Contractor shall furnish all earth material necessary to eliminate any edge of final pavement to shoulder gradient differential that exceeds 2 inches. The quantities shown on the plans are the Engineering estimate of the number of units that will be necessary for this project, actual field measurements may cause these quantities to vary.

Selected materials shall be used for this operation. The selected material shall consist of a friable material such as topsoil, etc., containing grass roots and having the properties of being comparatively porous, capable of growing grass and of a stable nature in that when compacted it will resist erosion and be capable of supporting vehicles when relatively wet. When the area where material is to be placed, is greater than 4 feet in width, it shall be scarified and/or disked to a minimum depth of 3 inches prior to placing any material. Scarifying or disking is not required for areas less than 4 feet in width. Borrow shall be mixed with the existing scarified and/or disked shoulder material in such a manner as to provide a seed bed in accord with Section 810.15 of the Standard Specifications. The Contractor has the option of placing the borrow material (a) Prior to placing final surface course or (b) Following the placing of the finished surface course.

The method of measurement will be the volume in cubic yards, determined in accordance with Section 203 of the Standard Specifications. The Contractor, at his option, may elect to base the quantity measured on the loose volume at the point of delivery by scaling and counting the loads, with a deduction of 35 percent made for shrinkage. All cost for borrow material including obtaining, hauling, and placing shall be included in the unit price.

(35) SECTION 203: BORROW PITS:

A. PERMITTING OF BORROW PITS

Prior to using borrow material from commercial or other borrow pits located wholly or in part in wetland areas, the contractor shall submit written evidence that operations to obtain fill material from the borrow pit(s) have received all appropriate and necessary authorizations from federal, state, and/or local authorities.

Permitted Borrow Pits

If the appropriate federal, state, and local authorities have issued permits, the contractor shall provide to SCDOT copies of all permits issued for such borrow pit sites.

B. BORROW PITS WITHOUT SECTION 404 PERMIT

For borrow pit sites for which a Section 404 permit under the Clean Water Act has not been issued, the contractor shall provide SCDOT with copies of documentation provided by the contractor or its subcontractor(s) to the U.S. Army Corps of Engineers, which shall, at a minimum, clearly define the location of the borrow pits and any wetlands on the borrow pit site; describe the proposed activities and processes that will be used to prepare the site, obtain fill material from the site, and store material at the site; and request the U.S. Army Corps of Engineers to confirm in writing that no Section 404 permit is required for those operations. No operations shall take place at the borrow sites for at least thirty days from the date of the submission of confirmation request to the U.S. Army Corps of Engineers. After thirty-one days the contractor may begin work. The contractor shall also provide copies to SCDOT of any response(s) provided by the U.S. Army Corps of Engineers to its documentation.

C. RESPONSIBILITY

SCDOT has no obligation or duty to review, assess, evaluate, or act upon such documentation and maintains no authority or responsibility to alter, amend, reject, accept, or otherwise exercise any control over the contractor or subcontractor regarding compliance with Clean Water Act

Section 404 and the implementing regulations for Section 404. Documentation submitted to SCDOT is for public information and coordination purposes only. The contractor is responsible for all costs related to the selection, operation, and/or activities at any borrow pit site in wetlands including fines, additional mitigation, and impact delays related to failure to obtain any and all necessary federal, state, and local permits and approvals for borrow pits and operations. Nothing herein shall affect in any way SCDOT's right to accept or reject any fill material not meeting the required technical specifications.

(36) SECTION 204: TEMPORARY SHORING WALL:

Subsection 204.4.5.2 of the Standard Specifications is amended to include the addition of the following section:

“The retaining wall system shall be designed to limit deformations (vertical and lateral displacements) that would affect the stability or performance of any adjacent structures (MSE walls, Bridge foundations, Pavement Structure, Approach Slabs, Embankment (stage construction), etc.). Deformations that must be limited shall include, but not be limited to, vertical settlement, sliding, bulging, bowing, bending, and buckling. Design criteria for allowable deformations shall be dependent on the type of structure that will be influenced by any deformation of the temporary shoring wall. Regardless of the type of structure being retained, the deformation criteria shall not exceed 3 inches without acceptance from the RCE. An instrumentation plan for monitoring deformations of the temporary shoring and any adjacent structure shall be submitted along with the shop drawings. The instrumentation plan shall indicate the maximum allowable deformations of the temporary shoring and adjacent structures. Typical instrumentation used for monitoring deformations are survey targets, settlement monuments, crack gages, inclinometers, and tilt monitors. The monitoring locations shall be established in a manner that they can be monitored consistently and obtain repeatable measurements for the entire construction period. A monitoring schedule that the Contractor will use during construction will also be included with the instrumentation plan. The Contractor shall submit periodic monitoring reports to the RCE in accordance with the approved instrumentation plan. Any changes in frequency of monitoring or report submittal must be sent to the RCE for acceptance. If the initial instrumentation plan is found not to be documenting adequately the movements of the temporary shoring or adjacent structures, the Contractor will revise the instrumentation plan and resubmit the revised plan for review and acceptance. If the measured deformations exceed the maximum allowable deformations shown in the instrumentation plan, the Contractor will be required to stop work immediately, and at his own expense, correct the situation to the satisfaction of the Department prior to resumption of construction activities. Extended monitoring after construction may be required if adjacent structures have been affected by the construction. The extended monitoring of the adjacent structures shall continue until the structures have stabilized and the Department concurs with the results and conclusions of the monitoring report. All costs associated with developing the instrumentation plan, purchasing instrumentation, installing instrumentation, and monitoring of the instrumentation shall be included in the unit cost of the temporary shoring item.”

(37) SECTION 205: HIGH-STRENGTH GEOTEXTILE FOR EMBANKMENT REINFORCEMENT:

April 21, 2015

A. DESCRIPTION

This work shall consist of furnishing and installing construction geotextiles in accordance with the details shown in the plans, specifications, or as directed by the RCE.

B. MATERIALS

A geotextile is defined as any permeable polymeric textile used with foundation, soil, rock, earth, or any other geotechnical engineering related material, as an integral part of a civil engineering project, structure, or system. Use geotextiles and thread used in joining geotextiles manufactured from fibers consisting of long-chain polymers, composed of at least 95 percent by weight of polyolefins or polyesters. Use geotextiles with fibers formed into a stable network such that the fibers or yarns retain their dimensional stability relative to each other, including selvages (edges) during shipping, handling, placement, and in service. Use geotextile free from defects or tears.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

1. **Minimum Average Roll Values:** All property values, with the exception of Apparent Opening Size (AOS), represent Minimum Average Roll Values (MARV) in the weakest principal direction. Provide geotextiles whose average test results from any roll sampled in a lot for conformance or quality assurance testing meets or exceeds minimum values provided in this Section.
2. **Apparent Opening Size:** Values for Apparent Opening Size (AOS) represent maximum average roll values. Acceptance will be based on ASTM D 4759.
3. **Reinforcement Geotextile:** Use reinforcement geotextile within existing and/or proposed fills for slope reinforcement.

Furnish geotextiles meeting the property requirements outlined in Table 1.

Table 1: High Strength Geotextile Properties (Design Requirements)^{1,2}

Property	Test Method	Geotextile Property Requirements
Long-Term Design Strength, T_{al} , MD		22,800 lb/ft
Long-Term Design Strength, T_{al} , XD		2,280 lb/ft
Sewn Seam Breaking Strength ³	ASTM D4884	900 lbs/ft
AOS	ASTM D4751	$\leq (1.0 \text{ to } 2.0)D_{85(\text{soil})}$
Permeability	ASTM D4491	$\geq 10k_{\text{soil}}$
Default Pullout Friction Factor, F^*	ASTM D6706	$0.6 \tan \Phi$
Default Alpha, α	ASTM D6706	0.6
Ultraviolet Stability	ASTM D4355	$\geq 50\%$ after 500 hrs of exposure

- Notes:
1. The test procedures shall conform to the most recently approved ATSM geotextile test procedures.
 2. All numeric values represent Minimum Average Roll Value (MARV).
 3. Applies to factory or field sewn seams.

4. Source Approval and Certification

Prior to construction, the Contractor shall submit to the Resident Construction Engineer (RCE) a Certification Package prepared by the geotextile reinforcement manufacturer. The Contractor shall allow 21 calendar days from the day the submittals are received by the RCE for review and acceptance. Submit the following information regarding each geotextile proposed for use:

- a. Manufacturer’s name and current address;
- b. Full product name/number, including roll number;
- c. Geosynthetic material (i.e. polymer type) and structure (including fiber/yarn type);
- d. Proposed geotextile use(s); and
- e. Certified test results for the properties outlined in Table 1 and below in Section 4.

The Certification shall state that the furnished geotextile soil reinforcement is in full compliance with the design requirements as stated in this specification and the design drawings and is fit for use in long-term critical soil reinforcement applications. In addition to the minimum required properties in Table 1, the submittal shall also certify the following values for each geotextile soil reinforcement used on the project:

- a. The ultimate tensile strength, T_{ULT} , (MARV) for geogrid soil reinforcements, MD/XD
- b. The tensile strength at 5% strain, MD
- c. The creep reduced tensile strength, MD
- d. The geotextile’s pullout coefficients (F^* , α)

The Contractor's submittal package shall include, but not be limited to, actual test results for tension, creep, durability, construction damage, joint/seam strength, pullout and quality control. A person having the legal authority to bond the manufacturer shall attest to the certificate. Any tests required shall be performed at no additional cost to the Department. If in the opinion of the RCE, the required documentation is not provided for individual reduction factors (RF) or pullout coefficients (F^* , α), default values for these design parameters shall be used in accordance with this specification.

a. Ultimate Tensile Strength (T_{ult}):

The ultimate tensile strength, T_{ult} , shall be determined from wide width tensile tests (ASTM D 4595). Geotextile samples tested in accordance with ASTM D 4595 shall be with an 8-inch width specimen, or a 4-inch specimen width with correlation to an 8-inch width. Correlation methodology shall be submitted to, and is subject to acceptance by the RCE. All geotextile strength tests (ASTM D 4595 and ASTM D 6637) shall be conducted at a strain rate of 10% per minute based on actual gage length necessary to meet the testing sample dimension requirements. Laboratory test results documenting the ultimate tensile strength, T_{ult} , in the reinforcement direction shall be based on the minimum average roll values (MARV) for the product.

b. Long-Term (Allowable) Design Tensile Strength (T_{al}):

The allowable tensile load per unit width of geotextile soil reinforcement, T_{al} , in accordance to the backfill type used shall be computed as follows:

$$T_{al} = \frac{T_{ult}}{RF}$$

c. Reduction Factor (RF):

The total reduction factor, RF, is the combined reduction factor for long-term degradation due to installation damage, creep, and durability. The total reduction factor, RF, shall be defined as follows:

$$RF = RF_{ID} \times RF_{CR} \times RF_D \geq 3.0$$

The individual reduction factors shall be documented in accordance with the site conditions, design calculations, and specifications. When sufficient documentation is not provided for individual reduction factors, RF_{ID} , RF_{CR} , and RF_D , a reduction factor RF of 7.0 shall be used. The reinforcement manufacturer shall certify and document the individual reduction factors as follows:

d. Installation Damage Reduction Factor (RF_{ID}):

The reduction factor for installation damage, RF_{ID} , shall be documented by field and laboratory test results and literature review, as described in ASTM D 5818 for the reinforced backfill specified or for more severe soils. Samples subjected to installation damage shall be tested for tensile strength and deformation characteristics in accordance with ASTM D 4595. Recommended values for reduction factors for installation damage (RF_{ID}) for various soils shall also be documented. The minimum installation damage reduction factor, RF_{ID} , shall be 1.1, regardless of product specific test results.

e. Creep Reduction Factor (RF_{CR}):

Laboratory test results documenting creep performance over a range of load levels, for a minimum duration of 10,000 hours based on tension creep test (ASTM D 5262) shall be required. Creep test samples shall be of sufficient width to be representative of overall product creep response (fiber creep testing will not be accepted).

The creep-limiting strength, T_I , shall be based on extrapolating the 10,000 hours (or longer duration) tension creep tests to a 75-year design life, unless a 100-year design life is specified in the plans. The creep extrapolation method shall be based on methods described in FHWA NHI-10-025, *"Design and Construction of Mechanically Stabilized Earth Walls and Reinforced Soil Slopes"* - Appendix "D". Laboratory test results and extrapolation methodology shall be documented.

The reduction factor for creep, RF_{CR} , is defined as the ratio of the average lot specific ultimate tensile strength, T_{ULTLOT} , to the creep-limiting strength, T_I . The average lot specific ultimate tensile strength, T_{ULTLOT} , for the lot of material used for creep testing, T_{ULTLOT} , shall be determined from wide width tensile test, ASTM D 4595.

f. Durability Reduction Factor (RF_D):

The total reduction factor for durability, RF_D , shall be defined as the combined effects of chemical and biological degradation. Laboratory test results, extrapolation techniques, and a comprehensive literature review shall document the reduction factor for durability for all material components in accordance with FHWA NHI-09-087, *"Corrosion / Degradation of Soil Reinforcements for Mechanically Stabilized Earth Walls and Reinforced Soil Slopes"*. The minimum durability reduction factor, RF_D , shall be 1.1, regardless of product specific test results.

g. Soil Reinforcement Pullout Coefficients (F^* , α):

The Certification Package shall document the pullout coefficients (F^* , α) meet or exceed the required coefficients necessary to obtain the T_{al} provided above where,

$$F^* = \text{Minimum pullout friction factor} = C_i \tan \Phi,$$

$$C_i = \text{Soil interaction coefficient} \geq 0.6$$

$$\Phi = \text{Soil Angle of Internal Friction}$$

The pullout friction factor, F^* , and the scale effect correction factor, α , shall be documented by laboratory testing from pullout tests. Pullout testing shall be conducted for site-specific materials or for materials representative of the reinforced backfill at confining pressures specified by the Engineer. When laboratory tests are used from representative soils, the representative soils shall be documented by providing the soil's angle of internal friction, gradation, and coefficient of uniformity ($C_u = D_{60}/D_{10}$). Recommended pullout coefficients for various soil types shall also be documented. The pullout coefficients shall be determined by using the quick effective stress pullout tests ("Measuring Geosynthetic Pullout Resistance in Soil" per ASTM D 6706). The soil interaction coefficient, C_i , shall be documented when computing the pullout friction factor, F^* . When sufficient documentation is not provided for pullout coefficients, F^* and α , and the coefficient of uniformity, C_u , is greater or equal to 4, the default values indicated in this specification can be used. If the coefficient of uniformity of the reinforced backfill is less than 4, laboratory pullout test shall be required to determine pullout friction factor, F^* , and the default scale effect factor, α .

5. Sample Approval.

To confirm that the on-site geotextile meets the property values specified, random samples shall be submitted to the RCE for evaluation. The machine direction shall be marked clearly on each sample submitted for evaluation. The machine direction is defined as the direction perpendicular to the axis of the roll.

Cut a sample from the geotextile roll with the minimum dimensions of 4 feet by the full width of the roll beyond the first wrap. The geotextile samples shall be cut from the roll with scissors, sharp knife, or other suitable method that produces a smooth edge and does not cause geotextile ripping or tearing. Submit a manufacturer's certificate of compliance signed by an authorized manufacturer's official. The certificate must attest that the geotextile meets all the

Minimum Average Roll Value (MARV) requirements specified in Table 1 as evaluated under the manufacturer's quality control program. Geotextiles supplied for construction of the project shall be certified in accordance with the following criteria. The tests described in the specification shall be conducted by the manufacturer or by an approved independent testing laboratory on samples taken from the same lot number as the material actually shipped to the project and at the specified frequency. The manufacturer or independent testing laboratory shall maintain the appropriate accreditations and must be preapproved by the Department. All rolls shall be marked with individual and distinct roll numbers. All roll numbers shall have traceable certified mill test reports from the given lot that they were manufactured. These test reports must be supplied to the Department prior to installation of any geotextile materials. After the sample and the required information have been submitted to the RCE, allow 30 calendar days for evaluation.

Product acceptance is determined by comparing the average test results of all specimens within a given sample to the Minimum Average Roll Values (MARV) listed in Table 1. Install geotextiles only after the material has been tested and/or evaluated and accepted. Replace all geotextiles installed prior to acceptance that do not meet specifications at Contractor's expense.

a. Sewn Seam Approval

If the geotextile seams are to be sewn in the field, the Contractor shall provide a section of sewn seam that can be sampled by the RCE before the geotextile is installed. The sewn seam shall be in accordance with ASTM 6193.

The seam sewn for sampling shall be sewn using the same equipment and procedures as will be used to sew the production seams. The seam sewn for sampling must be at least 6 feet in length. If the seams are sewn in the factory, the Contractor shall provide samples of the factory seam at random from any of the rolls to be used. Regardless of whether the seam is to be sewn in the factory or the field, the manufacturer and/or Contractor shall certify that the strength meets the requirement set forth in Table 1. If seams are to be sewn in both the machine and cross-machine direction, provide samples of seams from both directions. The seam assembly description shall be submitted by the Contractor to the Engineer and will be included with the seam sample obtained for testing. This description shall include the seam type, stitch type, sewing thread type(s), and stitch density.

If sewn seams are used for seaming the geotextile, use thread that consists of high strength polypropylene or polyester. Do not use nylon thread. Use thread that is of contrasting color to that of the geotextile itself.

If the manufacturer can provide a T_{al} MD that is greater than the sum of the required T_{al} MD and sewn seam breaking strength (for each specified in the project plans), the sewn seams may be eliminated and a minimum overlap of 1 foot may be used.

6. Identification, Shipment and Storage

Conform to ASTM D 4873, *Standard Guide for Identification, Storage, and Handling of Geotextiles*. Clearly label each roll of geotextile shipped to the project with the name and address of the manufacturer, full product name/number, quantity, and roll number.

The RCE will reject materials that are mislabeled or misrepresented. Wrap each roll with a material that protects the geotextile, including ends of the roll, from damage due to shipment, water, sunlight, and contaminants. Maintain the protective wrapping during periods of shipment and storage. Do not damage the geotextile or wrapping when unloading or transferring from one location to another. Do not drag the rolls.

During storage, elevate geotextile rolls off the ground and adequately cover to protect them from the following:

- a. Site construction damage;
- b. Precipitation;
- c. Ultraviolet radiation including sunlight;
- d. Chemicals that are strong acids or strong bases;
- e. Flames including welding sparks, temperatures in excess of 140 °F (60 °C); and
- f. Mud, dirt, dust, debris and any other environmental condition that may damage the physical property values of the geotextile

C. CONSTRUCTION REQUIREMENTS

1. General

Prepare the surface on which the geotextile is to be placed so that no damage occurs to the geotextile. Do not drive or operate any construction equipment directly on the geotextile. Dispose of material with defects, rips, holes, flaws, deterioration, or other damage. Do not use defective material in the work. The manufacturer shall be present on site for a minimum of two days of geotextile installation such that the manufacturer observes any field-sewn seams.

2. Installation Plan

Within thirty (30) calendar days after award of the contract or no later than thirty (30) calendar days before beginning high-strength geotextile installation, the Contractor shall submit to the Department for review a high-strength geotextile installation plan that includes as a minimum the following information:

- a. The Contractor shall certify and provide proof to the Department of experience in the work described. The Contractor shall have successfully installed at least 500,000 square yards of any geotextile that has sewn seams during the last five years. In addition, the Contractor shall have successfully completed at least five projects within the last five years of similar size and complexity to that of the Project.

The Contractor's experience shall be documented by providing a project summary that includes for each referenced project, the project start and completion dates, total quantity of geotextile installed (specifically indicate if high-strength geotextile installed), and a detailed description of the project, site conditions, and subsurface conditions. The project description shall include details of the geotextile materials, the equipment and technique used to install the geotextiles, the average and maximum area of geotextile installed, the client name and address, the name and telephone number of the representative of the consultant and owner for whom the work was performed and who can attest to the successful completion of the work, and any other information relevant to demonstrating the Contractor's qualifications.

- b. Resume of supervisor documenting experience and qualifications in the installation of both normal and high-strength geotextile. The Contractor shall have a full-time supervisor who has been in responsible charge of supervising geotextile installation operations for at least five projects in the last five years. The supervisor shall be present at the work site at all times during installation operations. The acceptability of the supervisor, as well as any replacement for the supervisor, will be subject to the approval of the Department.
- c. Shop drawings showing the planned locations and elevations of all high-strength geotextiles. The installation sequence shall also be provided including any required staging. The shop drawings shall also show the location of the bridge abutment, and the limits of the final embankment and construction staging.
- d. Detailed description of proposed installation procedures
- e. Proposed methods and equipment for sewn seams

3. Site Preparation

Prepare the installation site by clearing, grubbing, and excavating or filling the area to the design grade. This includes removal of topsoil or vegetation. The RCE will identify soft spots and unsuitable areas during site preparation. This may include but not be limited to proof-rolling specific areas defined by the RCE. Excavate these areas and backfill with approved borrow or bridge lift material and compact as specified. The area to be covered by the geotextile shall be graded to a smooth, uniform condition free from ruts, potholes, and protruding objects such as rocks or sticks.

The Contractor may construct a working platform, up to 2 feet in thickness, in lieu of grading the existing ground surface. A working platform is required where stumps or other protruding objects which cannot be removed without excessively disturbing the subgrade are present. These areas shall be prepared in accordance with the 2007 Standard Specifications for Highway Construction. The stumps shall be covered with at least 6 inches of fill before placement of the first geotextile layer.

4. **Geotextile Placement**

The geotextile shall be spread immediately ahead of the covering operation. The geotextile shall be laid with the machine direction perpendicular or parallel to centerline as shown in Plans. All seams shall be sewn. Seams to connect the geotextile strips end to end will not be allowed. The geotextile shall not be left exposed to sunlight during installation for a total of more than 14 calendar days. The geotextile shall be laid smooth without excessive wrinkles. Under no circumstances shall the geotextile be dragged through mud or over sharp objects, which could damage the geotextile.

Small soil piles or the manufacturer's recommended method shall be used as needed to hold the geotextile in place until the specified cover material is placed. Remove wrinkles and folds by pulling the geotextile taut as required.

Should the geotextile be torn or punctured or the sewn joints disturbed, as evidenced by visible geotextile damage, subgrade pumping, intrusion, or roadbed distortion, the backfill around the damaged or displaced area shall be removed and the damaged area repaired or replaced by the Contractor at no expense to the Department. The repair shall consist of a patch of the same type of geotextile placed over the damaged area. The patch shall be sewn at all edges.

If geotextile seams are to be sewn in the field or at the factory, the seams shall consist of two parallel rows of stitching, or shall consist of a J-seam, Type SSn-2. The two rows of stitching shall be 1 inch apart with a tolerance of plus or minus 0.5 inches and shall not cross, except for re-stitching. The stitching shall be a lock-type stitch. The minimum seam allowance, i.e., the minimum distance from the geotextile edge to the stitch line nearest to that edge, shall be 1.5 inches if a flat or prayer seam, Type SSa-2, is used. The minimum seam allowance for all other seam types shall be 1 inches. The seam, stitch type, and the equipment used to perform the stitching shall be as recommended by the manufacturer of the geotextile and as approved by the RCE.

The seams shall be sewn in such a manner that the seam can be inspected readily by the RCE or his representative. The seam strength will be tested and shall meet the requirements stated herein.

5. **Fill Placement.**

Embankment construction shall be kept symmetrical at all times to prevent localized bearing capacity failures beneath the embankment or lateral tipping or sliding of the embankment. Place fill over the geotextile by dumping onto previously placed material and pushing the material into place. Stockpiling of fill on the geotextile will not be allowed. Do not operate any construction equipment directly on the geosynthetic material under any circumstances.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Place the fill material in uniform layers so that there is a minimum lift thickness (loose) of 8 inches between the geosynthetic material and equipment tires or tracks at all times. The minimum thickness of the first lift is 8 inches. Do not allow construction equipment to turn on the first lift of material above the geosynthetic material. Do not blade the first lift placed over the geosynthetic material. If the subgrade is very soft with an undrained shear strength less than 500 psf, minimize pile heights to less than 3 feet and spread piles as soon as possible after dumping to minimize the potential for localized subgrade failure due to overloading of the subgrade.

Do not use sheepfoot or studded compaction equipment on the first lift placed over the geosynthetic material. Stop vibrator on compaction equipment if pumping occurs. Do not operate any construction equipment that results in rutting in excess of 3 inches on the first lift. If rutting exceeds 3 inches, decrease the construction equipment size and/or weight or increase the lift thickness. Use only rubber-tired rollers for compaction if any foundation failures occur when placing subsequent lifts. Compact all lifts to the moisture and density requirements for each embankment specified in the Standard Construction Specifications. Do not blade material down to remove ruts. Fill any ruts or depressions with additional material and compact to the specified density.

A sandy material that meets the requirements of an A-2 AASHTO soil classification shall be the only borrow excavation soil allowed for placement between the lowest elevation geotextile and the bottom of the pavement section. The embankment fill soils shall be compacted in accordance with the 2007 Standard Specifications for Highway Construction. Fill shall be placed in 12-inch maximum lift thicknesses where heavy compaction equipment is to be used and 6-inch maximum uncompacted lift thicknesses where hand-operated equipment is used.

The geotextile shall be pretensioned during installation using either Method 1 or Method 2 as described herein. The method selected will depend on whether or not a mudwave forms during placement of the first one or two lifts. If a mudwave forms as fill is pushed onto the first layer of geotextile, Method 1 shall be used. Method 1 shall continue to be used until the mudwave ceases to form as fill is placed and spread. Once mudwave formation ceases, Method 2 shall be used until the uppermost geotextile layer is covered with a minimum of 1 foot of compacted fill. These special construction methods are not needed for fill construction above this level. If a mudwave does not form as fill is pushed onto the first layer of geotextile, then Method 2 shall be used initially and until the uppermost geotextile layer is covered with at least 1 foot of compacted fill.

a. Method 1

After the working platform, if needed, has been constructed, the first layer of geotextile shall be laid as outlined in the project plans and the joints sewn together. The geotextile shall be stretched manually to ensure that no wrinkles are present in the geotextile. The fill shall be end-dumped and spread from the edge of the geotextile. The fill shall first be placed along the outside edges of the geotextile to form access roads. These access roads will serve three purposes: to lock the edges of the geotextile to form access roads, to contain the mudwave, and to provide access as needed to place fill in the center of the embankment. These access roads shall be approximately 16 feet wide. The access roads at the edges of the geotextile shall have a minimum height of 2 feet completed. Once the access roads are approximately 50 feet in length, fill shall be kept ahead of the filling operation, and the access roads shall be kept approximately 50 feet ahead of this filling operation. Keeping the mudwave ahead of this filling operation and keeping the edges of the geotextile from moving by use of the access roads will effectively pre-tension the geotextile. The geotextile shall be laid out no more than 20 feet ahead of the end of the access roads at any time to prevent overstressing of the geotextile seams.

b. Method 2

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

After the working platform, if needed, has been constructed, the first layer of geotextile shall be laid and sewn as in Method 1. The first lift of material shall be spread from the edge of the geotextile, keeping the center of the advancing fill lift ahead of the outside edges of the lift. The geotextile shall be manually pulled taut prior to fill placement. Embankment construction shall continue in this manner for subsequent lifts until the uppermost geotextile layer is completely covered with 1 foot of compacted fill.

D. METHOD OF MEASUREMENT

Measurement of geotextile is on a square yard basis and will be computed based on the total area of geotextile shown in the plans, exclusive of the area of geotextiles used in any overlaps, seams, and/or joints. This shall include all costs associated with installation of the geotextile. Overlaps and any geotextile waste are an incidental item.

E. BASIS OF PAYMENT

Payment at the contract unit price is full compensation for all resources necessary to complete the item of work under the contract. Payment for the completed and accepted quantities is made under the following:

Item No.	Pay Item	Unit
2037110	GEOTEX REINF.	SY

(38) SECTION 305: MAINTENANCE STONE:

Maintenance Stone used on this project shall conform to the gradation requirements of Section 305, or to the gradation specified for Aggregate No. CR-14 in the Standard Specifications.

(39) SECTION 401: ASPHALT BINDER ADJUSTMENT INDEX:

The Liquid Asphalt Binder Adjustment Index Supplemental Specification dated March 3, 2009 applies to this project. For this project the Basic Bituminous Material Index will be determined on the first calendar day of the month in which cost proposals are due. The index and adjustment table will be available on the internet at http://www.scdot.org/doing/constructionLetting_MonthlyIndex.aspx, or may be obtained from the office of the Contracts' Administrator.

The following is hereby included in the table entitled "Items of Work Eligible for A.C. Binder Adjustments" in the supplemental specification.

PREVENTATIVE MAINTENANCE SURFACE TREATMENT	SY	0.0026
ASPH. SURF. TREAT. (TRIPLE T-1)	SY	0.0024

All items of work included in this project, that are listed in the table entitled "Items of Work Eligible for A.C. Binder Adjustments" below paragraph 4 of the supplemental specification will be subject to price adjustment.

The following Section of the Supplemental Specification is hereby modified:

Additional Provisions:

The Department will calculate and apply asphalt binder index adjustments to estimates based on index values set at the beginning of the estimate period.

Estimate period begins on the 1st of the month and ends on the last day of the month. The 1st of the month Index will be compared to the contract Base Index to determine index adjustments for the estimate period.

(40) SECTION 401: DRESSING OF SHOULDERS:

Prior to the placement of asphalt mixtures on existing roadways, the contractor will be required to remove all vegetation adjacent to the edge of pavement which impedes the placement of the asphalt mixture to the specified width. The contractor shall also remove and dispose of all excess asphalt which is disturbed during minor grading for widening, or during removal of debris or grass from existing surface during preparation of surface for new lift. After the asphalt mixture has been placed, the contractor shall blade the disturbed material to the extent that the shoulder is left in a neat and presentable condition. All excess material shall be removed from the project. No direct payment shall be made for this work; all costs are to be included in the price of other items of work.

(41) SECTION 401: SURFACE PLANING OF ASPHALT PAVEMENT:

A. GENERAL

1. Description:

This Special Provision replaces all references to Surface Planing of Asphalt Pavement in Subsection 401 of the Standard Specifications in their entirety. It does not replace or amend Subsection 611 of the Standard Specifications. It describes the material and construction requirements for the surfacing planing of existing asphaltic concrete pavement by micro-milling to remove wheel ruts and other surface irregularities, restore proper grade and/or transverse slope of pavement as indicated in the Plans or as instructed by the RCE. Ensure that the planed surface provides a texture suitable for use as a temporary riding surface or an overlay with OGFC with no further treatment or overlays. Do not use the planed surface as a temporary riding surface for more than ten days if no corrective action is required and no more than 21 days if corrective action is required.

B. REFERENCED DOCUMENTS

1. SCDOT Standard Specifications, Edition of 2007
2. SC-M-502, Rideability of PCC Pavement

C. EQUIPMENT

1. Provide power-driven, self-propelled micro-milling equipment that is the size and shape that allows traffic to pass safely through areas adjacent to the work. Also, use equipment with the following characteristics.
 - a. Ensure that the equipment is equipped with a cutting mandrel with carbide-tipped cutting teeth designed for micro-milling HMA and bituminous treated pavement to close tolerances.
 - b. Ensure that the equipment is equipped with grade and slope controls operating from a string line or ski and based on mechanical or sonic operation.
 - c. Ensure that the equipment is capable of removing pavement to an accuracy of 0.0625 inches.
 - d. Ensure that the equipment is furnished with a lighting system for night work, as necessary.
 - e. Ensure that the equipment is provided with conveyors capable of transferring the milled material from the roadway to a truck located to the side, rear, or front while minimizing airborne dust and debris.

D. CONSTRUCTION REQUIREMENTS

1. Follow the Plans to micro-mill the designated areas and depths, including bridge decks, shoulder, and ramps, as required. Ensure that the following requirements are met.
 - a. Prior to commencement of the Work, construct a test section that is 1156 feet in length with a uniformly textured surface and cross section on the road to be treated as approved by the RCE. Ensure that the final pavement surface has a transverse pattern of 0.2 inches

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

center to center of each strike area and the difference between the ridge and valley of the mat surface in the test section does not exceed 0.0625 inches.

- b. Milling depth may range up to 2 inches as necessary to fully remove existing OGFC surface, which has a typical nominal depth of one inch, as well as lesser depths on shoulders to provide a planar surface that allows appropriate drainage prior to placement of new OGFC. While milling depths over one inch are anticipated to ensure OGFC removal in low spots as well as to meet rideability requirements, milling depth should be minimized when possible to avoid excessive removal of the pavement structure while still removing all existing OGFC.
 - c. The Department will test the test section for rideability following Subsection 6 of SC-M-502 for diamond ground and textured existing concrete pavement, except that the maximum acceptable rideability is 90 inches per mile for each 0.1 mile segment. The first and last 50 feet of the test section will not be included in the two 0.1 mile segments. Provide the RCE with at least three business days of notice prior to need of rideability testing.
2. If any of the requirements of Section D.1 are not met, do no further work and provide a written plan of action to the RCE detailing what steps will be taken to improve operations. The RCE may require corrective action to the test section prior to acceptance or accept the test section as is. Once the plan has been approved by the RCE, construct a second test section at a different location from the first. If the second test section meets the requirements of Section D.1 and is approved by the RCE, continuous milling may commence. If the second test section fails to meet the requirements of Section D.1, continue to construct test 1156 foot sections until satisfactory results are achieved.
 3. Once continuous operations commence, continue to produce a uniform finished surface and maintain a constant cross slope between extremities in each lane.
 4. Provide positive drainage to prevent water accumulation on the micro-milled pavement as shown on the Plans.
 5. Bevel back the longitudinal vertical edges greater than one inch that are produced by the removal process and left exposed to traffic. Bevel back at least 1.5 inches for each one inch of material removed. Use an attached mold board or other approved method.
 6. When removing material at ramp areas and ends of milled sections, the transverse edges may be temporarily tapered 10 feet to avoid creating a traffic hazard and to produce a smooth surface. However, ensure that a neat transverse joint is created prior to the placement of the OGFC; do not terminate OGFC by “pinching” the OGFC over a tapered area.
 7. Remove dust, residue, and loose milled material from the micro-milled surface. Do not allow traffic on the milled surface and do not place overlying layers on the milled surface until removal is complete.

E. ACCEPTANCE

1. Ensure that the micro-milling operation produces a uniform pavement texture that is true to line, grade, and cross section.
2. The Department will test and accept the milled surface for rideability as given in Subsections 6.2 through 6.4 of SC-M-502. The Adjusted Schedule of Payment given in Table 2 of Subsection 6 of SC-M-502 will apply to the contract unit price for the micro-milling as given in Subsection F of this special provision.
3. Micro-milled pavement surfaces are also subject to visual and straightedge inspections. Keep a 10-foot straightedge near the micro-milling operation to measure surface irregularities of the milled surface. Repair any areas exceeding 0.125 inches between the ridge and valley of the mat surface to the satisfaction of the RCE at no additional cost to the Department. Provide a written plan of action to the RCE for approval prior to performing any corrective action on the basis of rideability, grade, or surface texture.

F. MEASUREMENT AND PAYMENT

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

1. Measurement: The quantity measured for payment under this special provision is the number of square yards of micro-milled surface in place and accepted.
2. Basis of Payment: The quantity, as measured above, will be paid for at the contract unit price subject to the adjustments given herein, for which price and payment is full compensation for furnishing all materials, equipment, tools, labor, hauling, stockpiling, temporary asphalt, and any other incidentals necessary to satisfactorily complete the work. All reclaimed asphaltic pavement (RAP) becomes the property of the Contractor unless otherwise specified. No adjustment in the unit price for this item or other items will be considered for variations in the amount of RAP actually recovered.

Payment includes all direct and indirect costs and expenses required to complete the work. Payment will be made under:

Item No.	Pay Item	Unit
4013099	SURFACE PLANE ASPHALT PAVEMENT, VARIABLE	Square Yard

(42) SECTION 401: HOT MIX ASPHALT (HMA) QUALITY ASSURANCE:

Reference is made to the Supplemental Technical Specification “Hot Mix Asphalt (HMA) Quality Assurance.” For the purposes of applying this Supplemental Technical Specification, pay factor adjustments will be based on a unit price of \$75 per ton.

(43) SECTION 401: HOT-MIX ASPHALT RIDEABILITY:

Reference is made to the Supplemental Technical Specification “Hot-Mix Asphalt Rideability.” For the purposes of applying this Supplemental Technical Specification, pay factor adjustments will be based on a unit price of \$75 per ton.

(44) SECTION 401: FULL DEPTH ASPHALT PAVEMENT PATCHING:

A. DESCRIPTION:

The Contractor shall patch existing asphalt pavement at locations directed by the Engineer. This work shall consist of the removal of deteriorated pavement and replacing with a six (6) inch full depth asphalt plant mix patch.

B. CONSTRUCTION PROCESS:

The deteriorated pavement shall be removed to the width and length indicated by the RCE, with the face of the cut being straight and vertical. The pavement shall be removed to a depth of six (6) inches as directed by the RCE. In the event unstable material is encountered at this point, then such additional material shall be removed as directed by the RCE.

The volume of material removed below the patch shall be backfilled with crushed stone and thoroughly compacted in 4-inch layers with vibratory compactors. Prior to placing the asphalt patch material in the hole, the sides of the existing asphalt pavement shall be thoroughly tacked. The patch material shall then be placed in layers not exceeding 3 inches with each layer being thoroughly compacted with a vibratory compactor and pneumatic roller. The patch material shall be an approved SCDOT Asphalt Concrete Binder Course Mix. Patches shall be opened and filled in the same day. Asphalt mixture shall not be applied when the existing surface is wet or frozen. The finished patch shall be smooth riding. The patches are to be no less than six feet by six feet in size and should be spaced at not less than 25 feet between patches.

The quantity of full depth asphalt pavement patching to be paid for will be the actual number of square yards of existing asphalt pavement which has been patched and accepted. The work includes cleaning, removing, and disposing of debris from the patching work, furnishing and placement of crushed stone and asphalt patching material, and all other materials, labor, equipment, tools, supplies, transportation, and incidentals necessary to fulfill the requirements of this item of work.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The Contractor’s bid shall include 2000 square yards each of (6) inch and (4) inch full depth asphalt pavement patching. If more than the estimated square yards of patching are required by SCDOT, the Contractor will be paid a unit price of \$45.00 per square yard for both (4) inch and (6) inch patching. If less than the estimated square yards of patching are required by SCDOT, the Contractor shall reimburse SCDOT for the quantity of full depth patching that was not needed. Reimbursement will be paid to SCDOT at a unit price of \$45.00 per square yard for both (4) inch and (6) inch patching.

(45) SECTION 403: WARM MIX ASPHALT – ASPHALT INTERMEDIATE COURSE TYPE B (SPECIAL):

WMA Intermediate B Special will utilize the same specifications for Intermediate B with several exceptions:

- A. The mix must use WMA Technology using a chemical process on QPL # 77 to utilize maximum reduction in temperature to improve constructability in the field placement operations.
- B. The mix will require the exact same requirements as stated in SC-M-402 with exception of target air voids. The air voids will be targeted at 2.5-3.0% on the mix design to increase binder content and improve field compaction and fatigue resistance.
- C. The placement rate will also be different than conventional mix in order to make necessary repairs to the milled pavement sections during one lane closure sequence.
- D. In place density will be measured and accepted by using the gauge in lieu of taking roadway cores. A test strip will be required on the shoulder of the roadway to set up a roller pattern and establish target density. Ensure in place density is acceptable by taking 6 inch roadway cores at the end of the test strip to verify maximum compaction effort is obtained. All other mix acceptance testing will follow SC-M-400 using the same mixture acceptance criteria as the Intermediate Course Type B.

Item No.	Pay Item	Unit
4112320 X	WMA INTERMEDIATE COURSE TYPE B “SPECIAL”	TON

(46) SECTION 413: COLD CENTRAL PLANT RECYCLED MATERIAL:

413.1 DESCRIPTION

These special provisions cover the requirements for Cold Central Plant Recycling Material (CCPRM). Cold Central Plant Recycling (CCPR) is a process in which recycled asphalt concrete pavement is processed and stabilized using foamed asphalt or emulsified asphalt at a plant and then placed using conventional asphalt paving equipment. CCPRM will not be used as a final riding surface.

413.2 MATERIALS

413.2.1 STABILIZING AGENT (EMULSIFIED OR FOAMED PG BINDER)

Use stabilizing agents that are either asphalt emulsion or PG 64-22 binder (must be listed on SCDOT Qualified Product List 37 or 38). Use emulsified asphalts that conform to the requirements of AASHTO M 208, M 140, or M 316 that is formulated for CCPRM use. Use PG 64-22 that meets the requirements of section 401.2.1.1 of the Standard Specifications. Emulsified Asphalt, used as a stabilizing agent, is not permitted when placement occurs during night time hours and will be opened to traffic the next morning.

413.2.2 WATER

Use water for mixing that meets the requirements of Section 701.2.11 of the Standard Specifications.

413.2.3 OTHER ADDITIVES (HYDRATED LIME OR PORTLAND CEMENT)

Use, if necessary, additional additives that meet the requirements in TABLE 4. In the case where an additional additive is used, show type and dosage as described in the Job Mix Formula submitted to the Department.

413.2.3.1 HYDRATED LIME

Use hydrated lime that conforms to the requirements of AASHTO M 303, Type 1 from suppliers listed on the most recent edition of SCDOT Qualified Product List 39.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

413.2.3.2 PORTLAND CEMENT

Use Portland cement that conforms to the requirements of Subsection 701.2.1 with the allowable maximum alkali content ($\text{Na}_2\text{O}+0.658\text{K}_2\text{O}$) increased to 1.0%.

413.2.4 ASPHALT TACK COAT

Use an asphalt tack coat material that meets the requirements of Subsection 401.4.18 of the Standard Specifications.

413.2.5 ASPHALT FOG SEAL

Use an asphalt emulsion fog seal material or PG 64-22 binder from Qualified Product Listing No. 37 / 38.

413.2.6 FINE AGGREGATE

Use a fine aggregate for the Grit application that conforms to FA 10 or FA 13 and from suppliers listed on the most recent edition of SCDOT Qualified Products List 1.

413.2.9 CRUSHED RECLAIMED ASPHALT PAVEMENT (RAP) MATERIAL

Additional RAP material (other than that reclaimed from the project) may be used and, if added, must meet the requirements of Section 401.2.2.6 of the Specifications and TABLE 1.

TABLE 1 – ADDITIONAL CRUSHED RAP

Tests	Method	Limit
Deleterious Materials: Clay Lumps and Friable Particles in Aggregate	AASHTO T 112	0.2% maximum
Maximum Sieve Size, 1.5 inches (37mm)	AASHTO T 27	100% Passing

413.2.10 ADDITIONAL AGGREGATE

Add additional aggregate if deemed necessary so the results of the job mixture meet the gradation requirements in TABLE 3. If additional aggregate is needed ensure that it comes from materials listed on Qualified Product List 1 and/or 2 and also meet the requirements of TABLE 2.

TABLE 2 – ADDITIONAL AGGREGATE

Tests	Method	Limit
Los Angeles Abrasion Value	AASHTO T 96	55% maximum loss
Sand Equivalent	AASHTO T 176	45% minimum
Maximum Sieve Size, 1.5 inches (37mm)	AASHTO T 27	100% Passing
Water absorption	AASHTO T 85	3% maximum

413.3 JOB MIX FORMULA

Submit a job-mix formula (JMF) to the State Pavement Design Engineer for approval no less than 30 calendar days prior to the start of CCPRM operations. More than one JMF may be required to avoid any construction delays in case of materials changes. Ensure that the gradation of each

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

JMF is within the bands shown in TABLE 3. Ensure that the contingency plan addresses actions to be taken if the gradation fails to meet these requirements. The RCE reserves the right to require appropriate measures be taken that may include stopping the work.

TABLE 3 – JMF GRADATION RANGE

Sieve Size	Gradation Band* (Percent Passing)	
	Lower	Upper
1.5"	-	100
¾", 3/8", No. 4 , No. 8	Production targets set off of blended gradation	
No. 200	2	9

*Values based on AASHTO T 27 using washed, pulverized materials, prior to stabilization. For CCPRM using Foamed Asphalt, cement can be used as a portion of the material passing the No. 200 sieve.

Ensure that the following items are included on the JMF:

1. Target field density (nearest 0.1 lbs / #/ft³)
2. Target percent (nearest 0.1%) of the stabilizing agents to be added to the recycled mix
3. Target percent (nearest 0.1%) by weight of water (at room temperature) required
4. Expansion ratio, half-life characteristics, and temperature of asphalt binder at the time of dosage into foaming chamber (for mixtures using foamed asphalt). Minimum curing time/set time for the emulsified asphalt and temperature of emulsified asphalt at the time of dosage into the mixture (for mixtures using emulsified asphalt)
5. Target gradation for sieve sizes 1.5", ¾", 3/8", No.4 and No. 200 (including any aggregate to be added).

Note: If a change in source materials is made during construction, create and submit new JMFs to the RCE and ensure that they are approved prior to use on the project.

Item	Test Method	Criteria	Fabrication / Conditioning Procedure
1	Moisture Density Relations AASHTO T 180, Method D	Determined by Design; Used to Establish Target Field Density	----
2	Dry Indirect Tensile Strength AASHTO T 283 Section 11	45 psi minimum	Produce three specimens using 75 blows per side (or 30 gyrations per AASHTO T 312) compacted at or below OMC and cured as follows: 4 inch diameter specimens, oven dry at 104°F ±5 °F for 72 hrs ± 30 min. and cool to ambient temperature for 24 hrs ± 30 min.; 6 inch or 150 mm diameter specimens, air dried for 24 hours ± 30min., then an additional 48 hours at 104°F ±5 °F in sealed plastic bag, cool to ambient temperature for 24 hrs ± 30 min.
3	Retained Indirect Tensile Strength AASHTO T 283 Section 11	Minimum, 70% of the Dry ITS from Item 2	Produce an additional three specimens and cure according to Item 2, and then submerge in 77°F ± 1.8 °F water bath for 24 hours ± 30 min. prior to testing.
4	Expansion Ratio. Wirtgen 2012 Cold Recycling Manual	10 times when Aggregate Temperature is 50°F to 77°F 8 times when Aggregate Temperature is greater than 77°F	-----
5	Half-Life Wirtgen 2012 Cold Recycling Manual	6 second minimum	----

TABLE 4 – CCPRMJMF REQUIREMENTS

Item	Test Method	Criteria	Fabrication / Conditioning Procedure
------	-------------	----------	--------------------------------------

JMF Notes:

1. Choose the specification temperature using current FHWA LTPPBind software, using the weather station closest to the project. Ensure that the required temperature is the coldest temperature at the top of the recycled layer, using 98% reliability.
2. Compact samples to 6 in(150mm) diameter and at least 4.52 inches (115mm) in height, compacted to within 1% of design air voids at the design stabilizing agent content. Cure compacted samples at 140 ± 5 °F no less than 48 hours ± 30 mins. Before testing, check sample mass every two hours ± 5 mins until change in mass between successive checks does not exceed 0.05%. After curing, saw-cut two specimens from each compacted sample to 2 in. in height. Perform bulk density testing after saw-cutting.
3. Prepare three specimens at each of the three testing temperatures.
4. Select two testing temperatures that bracket the specification temperature. For example, if the specification temperature is -13°F, then two of the selected testing temperatures will be -4°F and -22°F. A temperature of 14°F or -40°F would be used as the third testing temperature.
5. Perform the tensile strength test on each specimen directly after the tensile creep test (at the same temperature as the creep test).
6. The critical cracking temperature is defined as the temperature at the intersection of the thermal stress curve (derived from the creep data) and the tensile strength line (the line connecting the average tensile strengths at the three testing temperatures).
7. Ensure that the critical cracking temperature predicted by the Indirect Tensile Test is less than or equal to the pavement temperature given for the project climate area and pavement depth by LTPPBind.

413.4 QUALITY CONTROL PLAN

Prepare a Quality Control Plan to ensure that operational techniques and activities provide a homogeneous and finished material of acceptable quality meeting the requirements of this special provision. Conform the plan to show sampling and testing that will be performed to control the processes and ensure material compliance within the requirements of this special provision. Provide the Quality Control Plan and the JMF that is intended to be used to accomplish the work to the State Pavement Design Engineer for review and approval no less than 30 calendar days prior to the start of CCPRM operations.

For each CCPRM project, a project specific Quality Control Plan is required, and must include the following (minimum) information:

1. A description of the Quality Control organization, including the number of full-time equivalent employees or Sub-Contractors with specific Quality Control responsibilities and an organizational chart showing lines of authority and reporting responsibilities.
2. A listing by discipline with the name, qualifications, duties, responsibilities and authorities for all persons proposed to be responsible for construction Quality Control.
3. A Quality Control Sampling, Testing and Analysis Plan with methods that include a description of how random locations for testing and sampling are determined.
4. Identification and description (and accreditation status) of the laboratories to be used for each type of testing.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

5. Specific list of documentation for Quality Control activities.
6. Procedures to meet contract requirements and corrective action when QC criteria are not met.
7. Procedures to protect stabilized material from receiving excessive moisture from weather events (i.e. rain, fog, etc.) and corrective actions when criteria are not met.
8. Contingency Plan including: inclement weather, equipment breakdowns, materials shortages, deficient density of installed CCPRM, material doesn't break or cure in timely manner, as established by the JMF, gradation is outside of tolerances, and production modifications based on changes in ambient and/or material temperature

413.5 PLANT EQUIPMENT

413.5.1 CCPRM PLANT

Use a plant that is capable of homogeneously incorporating all stabilizing agent(s) and materials up to the sizes shown in TABLE 3. Ensure that the plant is capable of delivering the amount of additives to within +/- 0.2% of the required amount by weight of the pulverized asphalt material, except that a capability of adding up to 5% water by weight of the pulverized bituminous material is mandatory. Use automated systems to regulate the application of stabilizing agent(s) and water that adjust automatically to the mass of the material being processed. When using foamed asphalt, outfit the plant with a test or inspection nozzle at one end of the spray bar that can produce a representative sample. Use a plant that is capable of maintaining the temperature of the liquid asphalt at a minimum of 300°F. Ensure that the plant is equipped with the means for the operator to verify that the stabilizing agent(s) and water are being evenly distributed and that the correct dosage rates of each are being applied. Ensure that the plant has the ability to print out stabilizing agent(s) and water quantities used during production. Ensure that the equipment is operated in accordance with the manufacturer's recommendations.

413.5.2 PLANT SCALES

Use scales that are approved in accordance with the requirements of SC-M-401.

413.5.3 TRUCKS, TRUCK SCALES AND AUTOMATIC PRINTER SYSTEM

Use truck scales and an automatic printer system that meets the requirements of SC-M-401.

413.6 PLACEMENT OPERATIONS EQUIPMENT

413.6.1 ASPHALT PAVERS

Use an asphalt paver that meets the requirements of Section 401.3.10 of the Standard Specifications. Place CCPRM at the specified depth set forth in the plans and ensure that the mix is spread uniformly without segregation.

413.6.2 ROLLERS

Use rollers that are self-propelled. Ensure that at least one pneumatic tire roller has a minimum gross operating weight of not less than 50,000 lbs. Ensure that at least one double steel-wheeled vibratory roller has a gross operating weight of not less than 24,000 lbs. and a width of 78 inches. Ensure that all rollers have properly working scrapers and water spraying systems.

413.7 CONSTRUCTION

413.7.1 WEATHER RESTRICTIONS

Ensure that recycling operations are performed when both the ambient temperature and material to be processed (measured in the shade and away from artificial heat) is a minimum 50°F. Do not perform any work when the weather forecast calls for freezing temperatures within 48 hours after placement of CCPRM on any portion of the project.

413.7.2 PLACING AND FINISHING

413.7.2.1 TRIAL TEST SECTION

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

At least one week, but not more than 30 days prior to the start of production, construct a 1,000 foot long trial section, one-lane wide, at the designated thickness and designed optimal stabilizing agent(s) content provided in the approved JMF. Construct the trial section at a location approved by the RCE on the project using the same construction procedures and equipment intended for the entire project. Cease production after construction of the trial section until the trial section is evaluated and accepted by the RCE. The Trial Section will be considered a LOT and payment will follow the payment tables established in this special provision.

In the event the initial trial section fails to meet JMF on gradation, binder content, designated depth, and field density requirements, make necessary corrections and construct a second trial section on the project site. The RCE may require a Technical Representative present during mixing and placing operations for the second trial section. When a Technical Representative is required, they must remain present during mixing and placement of any additional trial sections until acceptance has been made by the RCE. Additionally, ensure that the Technical Representative is present for the next day of production to oversee the mixing and placing operation. If during the next production day, the materials meet the mixture and placement acceptance criteria, the Technical Representative will no longer be required on the project site. If additional trial sections beyond the first two are needed, construct the trial section at sites approved by the RCE.

Ensure that the Technical Representative meets the following criteria:

1. Have 2 years minimum experience with the CCPRM process
2. Have personally supervised a minimum of 5 successful CCPRM projects
3. Have personal experience in developing CCPRM mix designs
4. Have the experience to perform and supervise field process control testing
5. Submit a list of references, with current telephone numbers, of persons who are able to verify the experience required herein.

Consultants or manufacturer’s representatives may be used to satisfy the technical representative requirements listed herein.

The initial trial section will be paid for at the contract unit price for CCPRM, to include price adjustments. If needed, the Department will pay for up to one additional trial section of CCPRM at the contract unit price, to include price adjustments. The Department will pay for a maximum of two trial sections at the contract unit price. If more than two trial sections are needed, the Contractor will bear all costs associated with producing and placing the material at a site approved by the RCE.

413.7.2.2 MATERIAL TESTING – QUALITY CONTROL

413.7.2.2.1 GRADATION AND BINDER CONTENT

CCPRM acceptance for gradation and binder content will be based on a mean of the results of each day’s run - production. A lot will be considered to be acceptable for gradation if the mean of the test results obtained is within the tolerance allowed for the job-mix formula as specified in **TABLE 5**. If a lot does not conform to the acceptance requirements for gradation stop paving/production and take corrective measures to bring the gradation within tolerance of the approved JMF.

TABLE 5						
Process Tolerance on Each Laboratory Sieve and Asphalt Content: Percent Plus and Minus						
No. Tests	1 ½”	¾”	⅜”	No. 4	No. 200	
1	0.0	8.0	8.0	8.0	2.0	

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

2	0.0	5.7	5.7	5.7	1.4
3	0.0	4.4	4.4	4.4	1.1
4	0.0	4.0	4.0	4.0	1.0
5	0.0	3.6	3.6	3.6	0.9
6	0.0	3.3	3.3	3.3	0.8
7	0.0	3.0	3.0	3.0	0.8
8	0.0	2.8	2.8	2.8	0.7
9 or more	0.0	2.3	2.3	2.3	0.6

Establish, as part of the JMF, a target percent passing for the 1.5", ¾", 3/8", No. 4 and No. 200 sieves. Create the JMF(s) using either existing materials obtained directly from the project site (prior to the start of construction) or from an existing stockpile of RAP. Quality Acceptance testing will be conducted by obtaining a sample of the mixture from the truck prior to it leaving the plant. The sample frequency will use SC-T-101 at a rate of 1 sample per 1000 tons.

Determine the asphalt binder content using an asphalt ignition oven in accordance with SC-T-75. Ensure a mix correction factor is determined in accordance with SC-T-75 prior to production. Perform gradation on the extracted ignition sample using SC-T-102. Cure all extraction samples to constant weight in a 300-350°F oven until the weight loss in a 15 minute period does not exceed +/- 1.0 grams within consecutive 15 minute intervals. There will be no price adjustment for asphalt content.

413.7.2.2.2 STABILIZING AGENT CONTENT

Provide with each gradation sample a computer printout of the stabilizing agent content percentage/rate of the plant at the time of sampling. If the dosage rate is outside of 0.20 percentage points, stop paving/production and take corrective measures to bring the dosage rate within tolerance of the approved JMF. In addition, provide a daily summary of the stabilizing agent content percentage/rate to the RCE.

413.7.2.2.3 MOISTURE CONTENT

Report the percent moisture content for prior to performing the mix extraction using the following equation:

$$\% \text{ Moisture} = \frac{\text{Original Mass} - \text{Final Mass}}{\text{Final Mass}} \times 100$$

413.7.2.2.4 MIXTURE STABILITY

When emulsified asphalt is used as the stabilizing agent, acceptance for Mixture Stability will be based on results of samples taken at a frequency a minimum of once per day. If the results are less than the established job-mix target, a pay adjustment will be applied for the tonnage represented by the results in section 414.8.4 under Acceptance.

413.7.2.2.5 DRY INDIRECT TENSILE STRENGTH

When foamed asphalt is used as the stabilizing agent, acceptance for Dry Indirect Tensile Strength will be based on results of samples taken at a minimum of once per day. If the results are less than the established job-mix target, a pay adjustment will be applied for the tonnage represented by the results in section 414.8.4 under Acceptance.

413.7.2.2.6 HALF-LIFE AND EXPANSION RATIO

Verify and provide reports to the RCE confirming that each load of asphalt binder used for foaming meets the requirements of **TABLE 4**.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

413.7.2.2.7 FIELD COMPACTION

Ensure compaction of the recycled mix is completed using rollers meeting the requirements of this specification. In addition, set the vibratory roller near the highest frequency and near the lowest amplitude setting without damaging the CCPRM. Ensure that final rolling eliminates pneumatic tire marks and to achieve density, and done using a double drum steel roller(s), either operating in a static, oscillating or vibratory mode. Use oscillating and vibratory mode only if it is shown to not damage the pavement. Complete finish rolling no more than one hour after paving is completed, unless otherwise approved by the RCE. Do not stop rollers and allow them to sit on the uncompacted material. Establish rolling patterns so that they begin or end on previously compacted material or the existing pavement. Perform rolling until the material reaches a density of 98 percent of the maximum target density from the JMF as measured via a nuclear density gauge following SC-T-30, SC-T-31, or SC-T-32.

Use a nuclear density gauge conforming to the requirements of SC-T-65 to determine mat density by the Direct Transmission method. Ensure that the nuclear density gauge has been calibrated within the previous 12 months. In addition, maintain documentation of such calibration service for the 12-month period from the date of the calibration service and furnish the same to the RCE if requested. Construct a control strip and establish a roller pattern in accordance with the requirements of SC-T-65. The control strip will be acceptable if the field proctor (AASHTO T 180, Method D) is at least 98 percent of the maximum target density from the approved JMF and the density of the compacted CCPRM course is not less than 98.0 percent of the maximum target density from the approved JMF. Construct an additional control strip when a change in the source of material is made, when a change in compaction equipment is made, when a significant change in the composition of the material occurs, a change in roadway conditions occurs, or when there is a failing test section.

413.7.2.2.8 DEPTH CHECKS

Perform depth checks at a minimum rate of twice per 5,000 linear feet after compaction by coring the newly CCPRM after compaction has been completed. Measure the depth by the height of the core in 3 separate evenly spaced measured transversely across the mat and average 3 readings. Use SC-T-101 to determine the random locations. The RCE will take verification measurements of the same core. Acceptance of CCPRM course for depth will be based on the mean result of measurements of samples taken from each LOT of material placed. A LOT will be considered acceptable for depth if the mean result of the tests is within the tolerance of the plan depth for the number of tests taken as shown in TABLE 7.

TABLE 7 – PROCESS TOLERANCE FOR DEPTH CHECKS

Plan Depth, inches	Tolerance, inches (Plus or Minus)		
	2 tests	3 tests	4 tests
≤ 4	0.45	0.35	0.30
>4 ≤ 8	0.65	0.50	0.40
>8 ≤ 12	0.90	0.70	0.50
>12	1.00	0.80	0.60

If the mean depth of a LOT of material is in excess of the tolerance, the payment will not be made for that material in excess of the tolerance for the plan depth specified throughout the length and width of the LOT of material represented by the tests. For excessive depth CCPRM courses, the rate of deduction from the tonnage allowed for payment as CCPRM course will be calculated

based on the JMF weight per square yard per inch of depth in excess of the tolerance for plan depth and the number of tests taken as specified in TABLE 7 or the RCE can require excessive material to be removed at no additional expense to the Department.

If the mean depth of a lot of material is deficient by more than the allowable tolerance for the plan depth specified, correction will be required and payment will be made for the quantity of material that has been placed in the lot. For sections of CCPRM course that are deficient in depth beyond the tolerance, furnish and place material specified for the subsequent course or as approved by the RCE to bring the deficient CCPRM course depth within the tolerance of the specified plan depth. This additional material will be placed at no additional expense to the Department.

413.7.2.2.9 FOGSEAL

Ensure that after compaction of the recycled material has being completed, a fog seal is applied to the recycled surface at a uniform application rate of 0.04 gal/sy residual using a emulsified asphalt or PG 64-22 binder. A light application of fine aggregated used as grit may be applied to the fog seal to aide in the reduction of CCPRM pickup and raveling (if necessary). Ensure that after fog sealing no traffic, including construction equipment, drives on the completed recycled material for at least two hours. After two hours rolling traffic may be permitted on the recycled material. This time may be adjusted by the RCE to allow establishment of sufficient cure so traffic will not initiate raveling. After opening to traffic, maintain the surface of the recycled pavement in a condition suitable for the safe movement of traffic. Remove all loose particles that may develop on the pavement surface without damaging the surface. Within the limits of the Contract, maintain the CCPRM material in good condition until all work has been completed and accepted. This maintenance includes immediate repairs or defects that may occur including raveling or other surface imperfections. Perform this work without additional compensation and repeat as often as may be necessary to keep the area continuously intact. Replace faulty work for the full depth of the layer.

413.7.2.2.10 VERIFICATION OF MOISTURE CONTENT

Prior to placing the asphalt concrete surface courses, or other applicable surface treatment, allow the CCPRM material to cure until the moisture of the material is a maximum of 50 percent of the optimum water content or until approval of the RCE is received. Measure the moisture content using AASHTO T 329 on samples taken from two random locations and immediately placed in a sealed plastic bag, as determined by the RCE for each production day. Other methods and sampling rates may be used if supplied in the Quality Control Plan and approved by the RCE. Split samples may be taken at the direction of the RCE. Split samples may be part of the random locations or at additional locations determined by the RCE. Apply a tack coat, in accordance with Subsection 401.4.18, prior to any additional asphalt layers. Do not use CCPRM as a final riding surface.

413.7.2.2.11 TESTING RECORDS

Ensure that all testing information is readably available during the performance of the work and all records are collected by the RCE prior to the next LOT. Provide accurate reports meeting the requirements of AASHTO R 18.

414.8 ACCEPTANCE

414.8.1 DAILY PRODUCTION - LOT

For the purposes of acceptance, each day's production will be considered a LOT. When paving is less than 2,000 feet, it will be combined with the next day's production or added to the previous day's production if it is the last day to create a lot.

414.8.2 MIX QUALITY ACCEPTANCE

If key test results are less than the established JMF target, a pay adjustment will be applied for the tonnage represented by the results using the TABLE 8 for mix stability and TABLE 9 for Indirect Tensile Strength.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

TABLE 8 - Mix Quality – Stability (Foamed Asphalt)	
% of Job-Mix Target Stability	% of Payment
Greater than 99.0	100
95.0 to 99.0	95
90.0 to 94.9	90
Less than 90.0*	90% pay and Cease Production

* Immediately cease production and notify the RCE when results fall below 90.0% of the approved JMF target. Make any necessary corrective actions to the mix and provide verification to the RCE that it conforms to the approved JMF. Should the results fall below the minimum specified in TABLE 4, remove the material represented by the failing results and replace it at no cost to the Department. With approval of the RCE, subsequent paving operations can resume.

TABLE 9 - Mix Quality – Indirect Tensile Strength (Emulsified Asphalt)	
% of Job-Mix Target Dry Indirect Tensile Strength	% of Payment
Greater than 99.0	100
95.0 to 98.9	95
90.0 to 94.9	90
Less than 90.0*	90% and Cease Production

* Immediately cease production and notify the RCE when results fall below 90.0% of the approved JMF target. Make any necessary corrective actions to the mix and provide verification to the RCE that it conforms to the approved JMF. Should the results fall below the minimum specified in TABLE 4, remove the material represented by the failing results and replace it at no cost to the Department. With approval of the RCE, subsequent paving operations can resume.

414.8.3 Field Compaction

Measure density by taking a nuclear density reading from two random test sites selected by the RCE within every 1000 feet. Ensure that readings are not located within 12 inches of the edge of any application width for CCPRM. Nuclear density test locations will be marked and labeled by the RCE in accordance with the requirements of SC-T-101.

The average of the density measurements taken for the LOT will be compared to the target nuclear density established by the approved JMF to determine the acceptability of the lot. Once the average density of the lot has been determined, do not provide additional compaction to raise the average. If two consecutive 1000 foot sections produce density results less than 98 percent of the target density, immediately notify the RCE and institute corrective action. By the end of the day's operations, furnish the test data developed during the day's recycling to the RCE. Verify results for every lot by performing a field proctor (AASHTO T 180, Method D). Ensure that the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

field proctor is at least 98 percent of the target density from the approved JMF. A pay adjustment for the tonnage represented by the LOT will be applied using TABLE 10.

TABLE 10 - PAYMENT SCHEDULE FOR LOT DENSITIES

% of Target Control Strip Density	% of Payment
98.0 or greater	100
97.0 to less than 98.0	95
96.0 to less than 97.0	90
Less than 96.0	75

414.8.4 LOT PAY FACTOR

The RCE will compute the Lot Pay Factor (LPF) once payments are determined using the tables for mix quality and field density using the following formula. The LPF will be rounded to the nearest 0.1%.

$$LPF = 0.50 (PF \text{ mix quality}) + 0.50 (PF \text{ Density})$$

414.9 MEASUREMENT

Measurement and payment for the Cold Plant Recycling Material (CCPRM) will be paid by the ton of the completed sections and will be paid for at the Contract unit price per ton. This price will be full compensation for removal, hauling and processing of the existing pavement (if RAP from the same project is used) and/or existing RAP stockpile(s); for additional aggregate if needed; for preparing, hauling, placing and compacting of all materials; furnishing stabilizing agents (PG Binder or Emulsion), fog seal, aggregate used in grit application and additives (lime and cement); for all freight involved; for all manipulations, rolling and brooming; for testing and documentation; asphalt supplier services; and for all labor, tools, equipment and incidentals necessary to complete the work. Net weight information will be furnished with each load of material delivered in accordance with the requirements of Section 401 of the Specifications. Batch weights will not be permitted as a method of measurement unless the Contractor's plant is equipped in accordance with the requirements of Section 401 of the Specifications, in which case the cumulative weight of the batches will be used for payment. The unit price for calculating pay factor will be \$48.00 per ton.

(47) SECTION 501: ROLLER COMPACTED CONCRETE:

A. GENERAL

1. Description: Roller Compacted Concrete (RCC) consists of aggregate, Portland cement and possibly other supplementary cementitious materials (fly ash, slag), and water. RCC is proportioned, mixed, placed, compacted, and cured in accordance with these specifications. Ensure that the RCC conforms to the lines, grades, thickness, and typical cross section shown in the plans or otherwise established by the RCE. When used as base course, it will be covered with one or more lifts of asphalt as shown on the Plans. Otherwise, the RCC will provide the final riding surface.

B. SUBMITTALS

1. Proposed RCC mix design: At least 45 days prior to the beginning of placing of RCC in the roadway, submit a proposed mix design to the State Materials Engineer at the SCDOT Office of Materials and Research for review. If the mix design appears satisfactory to the SCDOT, prepare and test a trial batch mixture at the Contractor's facilities to verify that the design criteria for strength are met. Perform batch mixture preparation and testing in the presence of

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

representatives of the SCDOT Office of Materials and Research. Make no production until an approved mix design has been obtained.

C. MATERIALS

1. General: The RCE will approve all materials to be used for RCC construction based on laboratory tests or certifications of representative materials that will be used in the actual construction. All materials must conform to Section 700 of the *SCDOT Standard Specifications for Highway Construction*, unless otherwise modified herein.
2. Portland Cement, Fly Ash, and Water-Granulated Blast Furnace Slag: All cementitious material must conform to Section 501.2.1. Pozzolanic substitution for Portland cement shall be allowed as specified in Section 701.4.9. If the use of silica fume is desired, have the type and usage pre-approved by the SCDOT State Materials Engineer.
3. Aggregates: Obtain all aggregates to be used from qualified sources appearing on the SCDOT Qualified Products Listing for aggregates. Use no aggregate where the plasticity index of the aggregate exceeds 5. Aggregates may be obtained from a single source or borrow pit, or may be a blend of fine and coarse aggregates. Use well-graded aggregate without gradation gaps and conforming to the following gradation:

Sieve Size	Percent Passing by Weight
1 inch	100
¾ inch	90-100
½ inch	70-100
3/8 inch	60-85
#4	40-60
#16	20-40
#100	6-18
#200	2-8

4. Water: Use only water conforming to Section 701.2.11 of the Standard Specifications.
5. Curing Compound: Where curing compounds are used, only those white-pigmented products shown in the current edition of SCDOT Qualified Products List 33 shall be used.

D. DESIGN STRENGTH

Use a mix design that demonstrates a compressive strength of 4000 psi within 28 days when specimens prepared according to ASTM C 1435 are tested according to AASHTO T 22. At least two sets of three cylinders will be produced, with one set being tested at 4 days and the other at 28 days. To determine the compressive strength for a set, two of the specimens will be tested. If the weaker of the two specimens is at least 90 percent of the strength of the stronger specimen, then the two values will be averaged to determine the overall compressive strength. If the weaker specimen has less than 90 percent of the strength of the stronger specimen, then the third specimen will be broken and all three specimens will be averaged. If one individual result is much lower or much higher than the other two due to defects in the specimen, that value may be discarded at the State Materials Engineer's discretion.

E. EQUIPMENT

1. General: Construct roller compacted concrete with any combination of equipment that will produce a completed pavement meeting the requirements for mixing, transporting, placing, compacting, finishing, and curing as provided in this specification.
2. Mixing Plant: Locate the mixing plant within a thirty-minute haul time from the point of RCC placement. Use only plants capable of producing an RCC pavement mixture in the proportions defined by the final approved mix design and within the specified tolerances. The capacity of the plant must be sufficient to produce a uniform mixture at a rate compatible with the placement equipment. If the plant is unable to produce material at a rate adequate to prevent unnecessary cold joints and frequent paver stoppages, the RCE may halt production until such time that a plant of appropriate capacity is used. Have the plant inspected and approved

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

by the SCDOT Office of Materials and Research prior to production of material under these specifications.

- a. **Pugmill Plant:** Use only pugmill plants of the central plant type with a twin-shaft pugmill mixer, capable of batch or continuous mixing, equipped with synchronized metering devices and feeders to maintain the correct proportions of aggregate, cement, pozzolan, and water. Other pugmill plant requirements are as follows:
 - 1) **Aggregate Storage:** If previously blended aggregate is furnished, storage may be in a stockpile from which it is fed directly to a conveyor feeding the mixer. If aggregate is furnished in two size groups, follow proper stockpiling techniques to ensure aggregate separation.
 - 2) **Aggregate Feed Rate:** Use aggregate bins with a feed rate controlled by a variable speed belt, or an operable gate calibrated to accurately deliver any specified quantity of material. If two aggregate size stockpile sources are used, the feed rate from each bin must be readily adjustable to change aggregate proportions, when required. Feed rate controls must maintain the established proportions of aggregate from each stockpile bin when the combined aggregate delivery is increased or decreased.
 - 3) **Plant Scales:** Plant scales, if utilized, for any weigh box or hopper must comply with Section 701.3.2.
 - 4) **Cement and Pozzolan Material Storage:** Supply separate and independent storage silos for Portland cement and pozzolan. At plants with two or more silos in which different types of cement or cementitious materials are stored, ensure that each silo has a sign at each fill inlet to reduce the potential for loading errors. Make the sign from a durable material, with minimum two-inch high by ¼-inch wide letters that are raised, indented, or cut. Ensure that the sign clearly identifies the material that is in the silo and may be easily read even when completely coated with dust. Flat signs with painted or applied letters are not acceptable.
 - 5) **Pre-blended Portland Cement and Pozzolan:** If using pre-blended Portland cement and pozzolan (such as fly ash or slag), employ blending equipment acceptable to the RCE and demonstrate, with a testing plan, the ability to successfully produce a uniform blended material meeting the mix design requirements. Perform testing on at least a daily basis to ensure both uniformity and proper quantities.
 - 6) **Cement and Pozzolan Feed Unit:** Provide a satisfactory means of dispensing Portland cement and pozzolan, volumetrically or by weight, to ensure a uniform and accurate quantity of cementitious material enters the mixer.
 - 7) **Water Control Unit:** Use a water control unit capable of measuring the required amount of water for the approved mix by weight or volume. Ensure that the unit is equipped with an accurate metering device. Vary the amount of water to be used only with the approval of the RCE.
 - 8) **Gob Hopper:** For continuous operating pugmills, provide a gob hopper attached to the end of the final discharge belt to temporarily hold the RCC discharge in order to allow the plant to operate continuously.
- b. **Rotary Drum Mixer:** Provide a rotary drum batch mixer capable of producing a homogeneous mixture, uniform in color, and having all coarse aggregate coated with mortar. Equip the mixer with batching equipment to meet the following requirements:
 - 1) **Weighing Equipment:** Measure the amounts of cement, pozzolan, and aggregate entering into each batch of RCC by direct weighing equipment. Use only weighing equipment that is readily adjustable in order to compensate for the moisture content of the aggregate or to change the proportionate batch weights. Include a visible dial or equally suitable device that will accurately register the scale load from zero to full capacity. The cement and pozzolan may be weighed separately or cumulatively in the same hopper on the same scale, provided the cement is weighed first.
 - 2) **Weigh Hoppers:** Use only bulk cement and pozzolan weigh hoppers that are equipped with vibrators to operate automatically and continuously while weighing hoppers are being dumped. Ensure that the weigh hopper has sufficient capacity to

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- hold not less than 10 percent in excess of the cementitious material required for one batch.
- 3) *Water Metering*: Measure the amount of water entering each batch of RCC by weight or volume. Use only equipment capable of measuring the water to within a tolerance of plus or minus one percent and equipped with an accurate gauge or dial measuring device. Vary the amount of water to be used only with the approval of the RCE. During batching, admit water to the mixer only through the water measuring device and then only at the time of charging.
 - 4) *Mixing Time*: Use only drum mixers equipped with an accurate clock or timing device, capable of being locked, for visibly indicating the time of mixing after all the materials, including the water, are in the mixer.
 - 5) *Recharging*: Discharge all material in the drum before recharging. Ensure that the volume of mixed material per batch does not exceed the manufacturer's rated capacity of the mixer.
3. Paver: Place RCC with a high-density asphalt-type paver subject to approval by the RCE. Use only pavers equipped with compacting devices capable of producing an RCC pavement with a minimum of 90 percent of the maximum density in accordance with AASHTO T 180, Method D prior to any additional compaction. Ensure that the paver is of suitable weight and stability to spread and finish the RCC material, without segregation, to the required thickness, smoothness, surface texture, cross-section, and grade.
 4. Compactors: Use self-propelled steel drum vibratory rollers having a minimum static weight of 10 tons for primary compaction. For final compaction, use either a steel drum roller, operated in a static mode, or a rubber-tired roller of equal or greater weight. Only use walk-behind vibratory rollers or plate tampers for compacting areas inaccessible to large rollers.
 5. Haul Trucks: Use trucks for hauling the RCC material from the plant to the paver with covers available to protect the material from inclement weather. To ensure adequate and continuous supply of RCC material to the paver, have a sufficient number of trucks. If the number of trucks is inadequate to prevent frequent starts and stops of the paver, cease production until additional trucks are obtained.
 6. Water Trucks: Keep at least one water truck, or other similar equipment, on-site and available for use throughout the paving and curing process. Equip such equipment with a spreader pipe containing fog spray nozzles capable of evenly applying a fine spray of water to the surface of the RCC without damaging the final surface.
 7. Inspection of Equipment: Before start-up, the Contractor's equipment will be carefully inspected. Should any of the equipment fail to operate properly, cease work until the deficiencies are corrected.
 8. Access for Inspection and Calibration: Provide the RCE or RCE's representative access at all times for any plant, equipment, or machinery to be used in order to check calibration, scales, controls, or operating adjustments.

F. CONSTRUCTION REQUIREMENTS

1. Preparation of Subgrade: Before the RCC processing begins, prepare the subgrade in accordance with Section 208 of the SCDOT Standard Specifications.
2. Quality Control Test Specimens: For each day's production, up to 1500 cubic yards of mix produced, prepare at least three sets of test specimens in accordance with ASTM C 1435 under the direct observation of the RCE or RCE's representative. A set of specimens consists of three cylinders. Make an additional three sets for each additional 1500 cubic yards or fraction thereof. Cure and transport the specimens to the Contractor's (or mix producer's) Office of Materials and Research-approved laboratory in accordance with ASTM C 31. Test two cylinders for compressive strength in accordance with ASTM C 39 at 3 days, 7 days, and 28 days under the direct observation of the RCE or RCE's representative. If the measured compressive strength between two cylinders varies by more than 10 percent of the stronger cylinder, test the third cylinder and average the results of the three cylinders. Otherwise, average the measured compressive strengths of the two cylinders tested at 28 days to

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

determine the compressive strength of the lot. Retain the compressive strength test results for inspection by the RCE.

If the compressive strength measured at 3 days indicates that the 28-day compressive strength will be less than 3500 psi, investigate the potential causes of the low strengths and report to the RCE within 24 hours. If the compressive strength measured at 3 days indicates 28-day compressive strengths less than 3200 psi, immediately stop production and notify the RCE. Do not resume production until the cause of the discrepancy has been determined to the satisfaction of the RCE. The RCE may adjust compressive strength targets at 3 days as production continues based on field experience.

3. **Mixing Process:** Use the same mixture for the entire project unless otherwise stated in the project documents. If, during production, the source of Portland cement, pozzolan, or aggregates is changed, then suspend production and submit a new mix design to the RCE for approval. Do not exceed the manufacturer's rated capacity for dry concrete mixtures in the mixing chamber. Keep the sides of the mixer and mixer blades free of hardened RCC or other buildups. Routinely check mixer blades for wear and replace if wear is sufficient to cause inadequate mixing.
 - a. *Mixing Time:* Use a mixing time adequate to ensure a thorough and complete mixing of all materials. Do not allow the mixing time, after all materials including water are in the mixer, to be less than 1½ minutes for one cubic yard and 20 seconds for each additional cubic yard.
 - b. *Mixture Ingredient Tolerances:* Ensure that the mixing plant receives the quantities of individual ingredients to within the following tolerances:

Material	Variation by Weight
Cementitious Material	±2.0%
Water	±3.0%
Aggregates	±4.0%

- c. *Plant Calibration:* Prior to commencement of RCC production, carry out a complete and comprehensive calibration of the plant in accordance with the manufacturer's recommended practice. Provide all scales, containers, and other items necessary to complete the calibration. After completion of the initial calibration, calibrate the plant periodically as directed by the RCE. Plants listed on SCDOT Qualified Product List 28 at the time of RCC production are exempt from this requirement, although the SCDOT reserves the right to require additional calibration if variation in mixture quantities are suspected.
 - d. *Daily Reports:* Supply daily plant records of production and quantities of materials used that day to the RCE. These records may be used as a check on plant calibration.
4. **Transportation:** Transport the RCC pavement material from the plant to the areas to be paved in dump trucks equipped with retractable protective covers for protection from rain or excessive evaporation. Ensure that the trucks are dumped clean with no buildup or hanging of RCC material in the corners. Have the dump trucks deposit the RCC material directly into the hopper of the paver or into a secondary material distribution system that deposits the material into the paver hopper. Dump truck delivery must be timed and scheduled so that RCC material is spread and compacted within the specified time limits.
5. **Placing:**
 - a. *Subbase Condition:* Prior to RCC placement, ensure that the surface of the subbase is clean and free of foreign material, ponded water, and frost. Ensure that the subbase is uniformly moist at the time of RCC placement. If sprinkling of water is required to remoisten certain areas, ensure that the method of sprinkling will not form mud or pools of freestanding water. Correct soft or yielding subbase areas prior to placement of RCC as specified in Section F.1 above.
 - b. **Weather Conditions:**

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- 1) *Cold Weather Precautions:* Employ cold weather precautions as detailed in Section 501.4.6 of the Standard Specifications.
 - 2) *Hot Weather Precautions:* During periods of hot weather or windy conditions, take special precautions to minimize moisture loss due to evaporation. Cooling of aggregate stockpiles by shading or the use of a fine mist may be required. Protective covers may be required on dump trucks. Keep the surface of the newly placed RCC pavement continuously moist.
 - 3) *Rain Limitations:* Conduct no placement of RCC pavement during rain conditions sufficient to be detrimental to the finished product. Placement may continue during light rain or mists provided the surface of the RCC pavement is not eroded or damaged in any way. Use dump truck covers during these periods. The RCE may terminate paving at any time when, in the RCE's judgement, the rain is detrimental to the finished product.
- c. *Paver Requirements:* Place all RCC with an approved paver as specified in Section E.3 and also meet the following requirements:
- 1) *Filling the Paver:* Do not allow the quantity of RCC material in the paver to approach empty between loads. Maintain the material above the auger at all times during paving.

Stopping the Paver: Ensure that the paver proceeds in a steady, continuous operation with minimal starts and stops, except to begin a new lane. Maximum paver speed during laydown is 10 feet per minute. Higher paver speeds may be allowed at the discretion of the RCE if the higher speeds may be obtained without distress to the final product or cause additional starts and stops.
 - 2) *Surface Condition:* Ensure that the surface of the RCC pavement is smooth, uniform, and continuous without excessive tears, ridges, or aggregate segregation once it leaves the paver.
- d. *Inaccessible Areas:* Pave all areas inaccessible to either roller or paver with cast-in-place concrete meeting the compressive strength requirements of these specifications.
- e. *Adjacent Lane Pavement:* Place adjacent paving lanes within 60 minutes. If more than 60 minutes elapses between placement of adjacent lanes, the vertical joint must be considered a cold joint and prepared in accordance with Section F.7 below. At the discretion of the RCE, this time may be increased or decreased depending on ambient conditions of temperature, wind, and humidity. Multiple pavers may be used in tandem to reduce the occurrence of cold joints.
- f. *Hand Spreading:* Broadcasting or fanning the RCC material across areas being compacted is not permissible. Such additions of materials may only be done immediately behind the paver and before any compaction has taken place. Any segregated coarse aggregate shall be removed from the surface before rolling.
- g. *Segregation:* If segregation occurs in the RCC during paving operations, placement shall cease until the cause is determined and corrected to the satisfaction of the RCE. If the segregation is judged by the RCE to be severe, remove and replace the segregated area at no additional cost to the Department.
6. **Compaction:**
- a. *Time to Compaction Start:* Ensure that compaction begins with the placement process and is completed within 60 minutes of the start of the mixing at the plant. The time may be increased or decreased at the discretion of the RCE depending on ambient conditions of temperature and humidity. Do not permit delays in rolling unless approved by the RCE. Plan operations and supply sufficient equipment to ensure that these criteria are met.
 - b. *Rolling:* Determine the sequence and number of passes by vibratory and non-vibratory rollers to obtain the specified density and surface finish. Only operate rollers in the vibratory mode while in motion. Rubber-tire rollers may be used for final compaction. Use additional

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

rollers if specific density requirements are not obtained or if placing operations get ahead of the rolling operations.

- c. *Rolling Longitudinal and Transverse Joints:* Do not operate the roller within 2 feet of the edge of a freshly placed lane until the adjacent lane is placed. Then, roll both edges of the two lanes together within the allowable time. If a cold joint is planned, then roll the complete lane and follow cold joint procedures as specified in Section F.7 below.
- d. *Inaccessible Areas:* Compact areas inaccessible to large rollers using walk-behind rollers or hand tampers.
- e. *Density Requirements:* Field density tests will be performed in accordance with SC-T-33 as soon as possible, but no later than 30 minutes after the completion of the rolling. Only wet density is used for evaluation. The required minimum density is 98 percent of the maximum laboratory density obtained according to AASHTO T 180 (Method D). The in-place density and moisture content may be determined with a nuclear moisture-density gauge. The gauge will be calibrated for moisture content at the beginning of the work and at any time during the work. RCC properly placed and compacted, but not meeting the density requirements, shall be cored and tested at the Contractor's expense. If the tested area achieves 28-day design strength, it will be paid at the full unit price. If the tested area indicates strength less than 3500 psi but greater than 3150 psi, payment will be made as follows:

Compressive Strength (psi)	Price Reduction (Percent of Unit Bid Price)
3300-3499	5
3150-3299	15

If the cores indicate strengths less than 3150 psi at 28 days or longer, the Department will evaluate the results and may reject the affected area and require removal and replacement or elect to pay at a reduced rate.

7. Joints:

- a. *Fresh Vertical Joints:* A joint is considered a fresh joint when an adjacent RCC lane is placed within 60 minutes of placing the previous lane or as specified by the RCE based on ambient conditions. Fresh joints do not require special treatment.
- b. *Cold Vertical Joints:* Any planned or unplanned construction joints that do not qualify as fresh joints are considered cold joints. Prior to placing fresh RCC mixture against a compacted cold vertical joint, thoroughly clean the cold joint of loose or foreign material. Wet the vertical joint face and maintain it in a moist condition immediately prior to placement of the adjacent lane.
 - 1) *Sawing Cold Vertical Joints:* For uncompacted surfaces or slopes more than 15 degrees from the vertical, cut the joint vertically for the full depth. Within 2 hours of final compaction, the edge of a cold joint may be cut with approved mechanical equipment. For edges cut after 2 hours, sawcut to the full depth of the pavement. Demonstrate any modification or substitution of the sawcutting procedure to the RCE for approval prior to use. In no case allow cutting of the edge to cause raveling or tearing of the surface. Moisten the cut edge immediately prior to placement of the adjacent lane.
- c. *RCC Pavement Joints at Structures:* Line structures such as manholes, valves, or concrete curb and gutter with joint filler as defined in Section 501.2.6.1 of the Standard Specifications.
- d. *Control Joints:* Construct transverse contraction joints at regular intervals up to 20-feet in the RCC pavement to induce cracking at pre-selected locations unless otherwise indicated on the Plans or as directed by the RCE. At the option of the Contractor, soft-cut or green-cut saws may be utilized as soon as possible behind the rolling operation and set to manufacturer's recommendations. Conventional cut saws must be used as soon as the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

sawing operation will not result in raveling or other damage to the RCC pavement, but not more than 18 hours after RCC placement. Cut all joints to 1/4 the depth of the RCC pavement to a single saw blade width.

8. Finishing:

Ensure that the finished surface of the RCC pavement, when tested with a 10-foot straightedge or crown surface template, does not vary from the straightedge or template by more than 1/4 inch at any one point and shall be within 5/8 inch of the specified finished grade. When surface irregularities are outside these tolerances, diamond-grind the surface to meet the tolerance at no additional cost to the SCDOT.

9. Curing:

Immediately after final rolling and compaction testing, keep the surface of the RCC pavement continuously moist until an approved curing compound, a suitable prime coat, or a layer of asphalt concrete is applied.

a. *Water Cure:* Apply water cure by water trucks equipped with fog spray nozzles, soaking hoses, sprinkling system, or other means such that a uniform moist condition on the surface of the RCC is ensured. Apply this moisture in a manner that will not erode or damage the surface of the finished RCC pavement.

b. *Curing Compound:* Do not use curing compounds when the RCC material is to be promptly covered with asphalt. Apply curing compound as indicated in Section 501.4.11 of the Standard Specifications, except that the minimum rate of curing compound application is 0.09 gallons per square yard (11 square yards per gallon) unless a higher rate is specified by the curing compound manufacturer.

10. Traffic: Protect the RCC from vehicular traffic during the curing period. Completed portions of the RCC pavement may be opened to automotive and light truck traffic as soon as the strength is sufficient to prevent damage to the RCC. The pavement may be opened to unrestricted traffic after 4 days. If the temperature drops below 40° F, then the period of time the temperature is below 40° F will be added to the minimum time to opening.

11. Maintenance: Maintain the RCC pavement in good condition until all work is completed and accepted. Perform such maintenance at no additional cost to the SCDOT.

12. Thickness: Provide and operate equipment capable of extracting a small (approximately 1 inch diameter or greater) core to determine the pavement thickness. Extract samples in the presence of the RCE or RCE's representative unless otherwise directed.

13. Thickness Tolerance - The thickness of the completed RCC is measured at staggered intervals not to exceed 250 feet in length for two-lane roads. Measure the core to the nearest 1/8 inch at three different, evenly spaced locations and record the average. Where the RCC is deficient by more than 1/2 inch, correct such areas by removal and replacement. Where the measured thickness is more than 1/2 inch thicker than shown on the Plans, it is considered as the specified thickness, plus 1/2 inch. The average job thickness is the average of the depth measurements determined as specified above. Should this average thickness be more than 1/4 inch below the specified thickness, an adjusted unit price is used in calculating payment. This adjusted contract unit price bears the same ratio to the contract unit price as the square of the average thickness bears to the square of the specified thickness. When the contract includes more than one road, each road is considered separately.

G. UNIT PRICE

1. A unit price of \$36/SY will be applied for the purpose of pay adjustment.

(48) SECTION 501: NONWOVEN GEOTEXTILE INTERLAYER FABRIC:

This Special Provision describes the construction and material requirements for installation of an interlayer fabric to be used between concrete pavement and cement stabilized aggregate base.

A. REFERENCED DOCUMENTS

ASTM D 4355 Standard Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus

ASTM D 4491 Standard Test Methods for Water Permeability of Geotextiles by Permittivity

ASTM D 4595 Standard Test Method for Tensile Properties of Geotextiles by the Wide-Width Strip Method

ASTM D 4716 Standard Test Method for Determining the (In-plane) Flow Rate per Unit Width and Hydraulic Transmissivity of a Geosynthetic Using a Constant Head

ASTM D 5199 Standard Test Method for Measuring the Nominal Thickness of Geosynthetics

ASTM D 5261 Standard Test Method for Measuring Mass per Unit Area of Geotextiles

B. GENERAL

1. Provide and install a non-woven geotextile interlayer to be placed between concrete pavements and cement stabilized aggregate bases. The fabric is intended to provide limited drainage, separation between the base and pavement to retard the transmission of cracking, and relief of bedding stress due to movement of the concrete pavement on a stiff base. Attach the fabric firmly to the base to prevent movement during paving operations. Conduct paving operations to minimize fabric damage due to vehicle movements. Repair any damage prior to paving to ensure complete coverage of the base.

C. MATERIAL REQUIREMENTS

1. Geotextile requirements:
 - a. Fabric type: Provide a nonwoven needle-punched geotextile. Thermal treatment (calendaring or IR) is not acceptable.
 - b. Color: Ensure that the color is uniform and uses nominally the same color fibers throughout.
 - c. The following requirements must be met by 95% of samples. Minimum Average Roll Values (MARV) are also acceptable:
 - 1) Mass per unit area: Ensure that mass per unit area is greater than 450 grams per square meter (13.3 ounces per square yard) and less than or equal to 550 grams per square meter (16.2 ounces per square yard) when tested in accordance with ASTM D 5261.
 - 2) Thickness under load (pressure): Ensure that the thickness under load is greater than or equal to 3.0 mm at 2 kPa (0.12 inch at 0.29 psi), greater than 2.5 mm at 20 kPa (0.10 inch at 2.9 psi), and greater than 1.0 mm at 200 kPa (0.04 inch at 29 psi) when tested in accordance with ASTM D 5199.
 - 3) Wide-width tensile strength: Ensure the tensile strength is greater than 10 kN per meter (685 pounds per foot) when tested in accordance with ASTM D 4595.
 - 4) Maximum elongation: Ensure that the maximum elongation is less than or equal to 130 percent when tested in accordance with ASTM D 4595.
 - 5) Water permeability in normal direction under load (pressure): Ensure that the water permeability in the normal direction under load (pressure) is greater than or equal to 1×10^{-4} meters per second (3.3×10^{-4} feet per second) when tested in accordance with modified ASTM D 4491 at 20 kPa (2.9 psi) or ASTM D 5493.
 - 6) In-plane water permeability: Ensure that the in-plane water permeability (transmissivity) under load (pressure) is greater than or equal to 5×10^{-4} meters per second (1.6×10^{-3} feet per second) when tested in accordance with modified ASTM D 4716 at 20 kPa (2.9 psi) and is greater than or equal to 2×10^{-4} meters per second (6.6×10^{-4} feet per second) when tested in accordance with modified ASTM D 4716 at 200 kPa (29 psi) or ASTM D 6574.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- 7) Weather resistance: Ensure that the retained strength after 500 hours of weathering is greater than or equal to 60 percent of the initial strength when tested in accordance with ASTM D 4355.
 - 8) Alkali resistance: Provide a manufacturer certification that the supplied material is composed of 96% or more polypropylene/polyethylene.
- d. Certification: Prior to incorporation in the work, provide the RCE with a manufacturer's certification stating that the material being used meets all requirements of this Special Provision for each batch or lot of material. Ensure that the provided certification references the batch number(s) supplied and is attested to by the notarized signature of an officer of the manufacturing company. Also provide the RCE with a copy of the manufacturer's independent test data showing results for all the properties given in this section obtained by the test methods provided. Test data does not have to be batch or lot-specific.
2. Anchor system requirements:
- a. Fasteners: Use hardened steel pin fasteners with a galvanized finish intended for insertion in concrete by a powered fastening tool. Select a diameter and length adequate to anchor the geotextile such that normal paving operations do not dislodge the pins and the base is not damaged by the insertion.
 - b. Discs: Provide thin, galvanized steel discs ranging from 2.0 to 2.8 inches in diameter with small stamped claws for holding the fabric and distributing the anchoring load.

D. CONSTRUCTION

1. Preparation of base: Repair any damaged or defective areas in the base to the satisfaction of the RCE. Thoroughly sweep the base immediately prior to fabric placement and ensure that the surface is free of loose debris.
2. Timing of placement: Place fabric no more than 3 days ahead of paving operations. If concrete is being placed by trucks directly in front of the paver, do not place fabric more than 650 feet ahead of the paver.
3. Placement: Roll the material onto the base, keeping the fabric tight with no wrinkles or folds. Roll out the sections of the fabric in a sequence that will facilitate good overlapping, prevent folding or tearing by construction traffic, and minimize the potential that the material will be disturbed by the paver. Overlap sections of the fabric a minimum of 6 inches and a maximum of 10 inches. Ensure that no more than three layers overlap at any point. Extend the fabric a minimum of 12 inches beyond the edge of the concrete pavement.
4. Anchoring: Secure the fabric with fasteners punched through the steel discs into the base. Space the anchors as necessary to securely hold the fabric in position during paving operations. However, maintain a maximum anchor spacing of 6 feet under all circumstances.
5. Construction traffic: Keep all nonessential traffic off of the fabric. Ensure that operations are staged such that no vehicles make sharp turning motions on the fabric. Remove and replace damaged fabric using required placement overlaps and sufficient anchors.
6. Moisture: Lightly but completely dampen the fabric ahead of the paving operations to ensure that the fabric does not draw water from the concrete. If the fabric is wetted due to precipitation or other reasons to the point of standing water or that free water appears when the fabric is walked on, allow the fabric to dry to a moist condition before continuing paving operations.

(49) SECTION 503: PORTLAND CEMENT CONCRETE PAVEMENT UNIT COST:

The Contractor is obligated to comply with the 2007 Standard Specifications regarding compressive strength and thickness. This Special Provision establishes the Portland Cement Concrete unit cost for any payment adjustments associated with Supplemental Technical Specification SC-M-501, SC-M-502, SC-M-503, regarding compressive strength, rideability, and thickness. For purposes of applying any payment adjustments associated with these Supplemental Technical Specification, a unit price of \$45/SY will be used. SC-M-502DB no longer applies. SC-M-502 (04/16) will be applied to this contract unless noted otherwise in Exhibit 4c.

(50) DIVISION 600: MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES:

The Contractor is advised that all work involving design or installation of traffic control devices, including but not limited to signs, pavement markings, elements of work zone traffic control, signals, etc., shall be in compliance with the FHWA's Manual on Uniform Traffic Control Devices (MUTCD), latest edition. The latest edition is defined as the edition that the Traffic Engineering Division of SCDOT recognizes as having been officially adopted (Engineering Directive, Memorandum 19) at the time the project is let, unless stated otherwise in the Special Provisions.

(51) DIVISION 600: EVALUATION OF RETROREFLECTIVITY:

Within 20 days of initial application, the Contractor shall arrange for an independent party to evaluate the retroreflectivity of the pavement markings using a mobile retroreflectometer utilizing 30 meter CEN geometry. All lines on the interstate mainline, CD routes and exit/entrance ramps shall be measured in both directions. The independent party conducting the measurements shall furnish directly to the Department a report detailing the average of the readings over one mile segments for each type of long line (white edgeline, white lane lines, yellow edgelines) along the length of the project. Average measurements shall also be provided along each ramp. Interstate mile markers may be used for beginning and ending points, with the first and last segments in each direction being less than one mile in length. The initial minimum retroreflectivity values shall be as follows:

Retroreflectivity (mcd/lux/m ²)	
<u>White</u>	<u>Yellow</u>
500	400

A second evaluation shall take place within 20 days prior to the end of the 180 day observation period. The evaluation method shall be the same as described above. The 180 day minimum retroreflectivity values shall be as follows:

Retroreflectivity (mcd/lux/m ²)	
<u>White</u>	<u>Yellow</u>
450	350

Any markings failing to meet the initial minimum retroreflectivity requirements by more than 50 mcd/lux/m² shall be replaced immediately at the Contractor's expense. Any markings failing to meet initial requirements by less than 50 mcd/lux/m² may be reevaluated at the time of the 180 day evaluation unless the defect causing the lower readings is obvious to the Engineer.

(52) DIVISION 600: INTELLIGENT TRANSPORTATION SYSTEM:

A. GENERAL PROVISIONS FOR INTELLIGENT TRANSPORTATION SYSTEM

The work on this project consists of a Contractor maintaining and replacement/installation of an existing fiber line that houses South Carolina Department of Administration (SCDOA) and SCDOT Intelligent Transportation System (ITS) communications along I-126. The contractor shall maintain connectivity of this fiber line for the duration of this project except for the downtime allowed by SCDOT and SCDOA for transferring the connection to the new line. This project will include removal and disposal of existing ITS elements, furnishing and installing fiber optic cable in the conduits, service boxes, electrical services, and all miscellaneous hardware to make an operational fiber line system.

The CONTRACTOR shall provide an additional conduit adjacent to the fiber line for use by "others" to house a future ITS fiber line to be installed by SCDOT. The CONTRACTOR is not responsible

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

for the maintenance or construction of permanent SCDOT ITS elements; however permanent ITS elements should be considered when designing the fiber line and service boxes for future connectivity.

Any existing DMS's will be removed and returned to the SCDOT per the specification. All other elements shall be disposed of per the following section REMOVAL SALVAGE AND DISPOSAL OF EQUIPMENT AND MATERIALS.

All work involved in this contract shall be in accordance with the following publications:

The South Carolina "Specifications for Intelligent Transportation Systems", – referred to below as SECTION 600: ITS ELEMENTS INSTALLATION.

The AASHTO "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals", latest edition.

B. DEVICE LOCATION-EXPECTATION

Fiber optic cable and service boxes shall be as far back to the ROW limits as possible.

C. SUBMISSION:

SUBMISSION OF REQUIRED DESIGN INFORMATION AND DESIGN DRAWINGS:

It is essential that the ITS contractor make all required design submissions following award of this contract.

(53) DIVISION 600: ITS ELEMENTS INSTALLATION:

A. PROJECT DESCRIPTION

1. Scope: ITS System – The Project includes the installation of a Fiber System along I-126 throughout the limits of the project. This will be a turn-key Fiber project, with the CONTRACTOR furnishing and installing a 120 SM fiber optic cable (FOC) in 2 inch conduits, fiber optic cable splicing and terminations, fiber optic cable testing, service boxes, pull boxes, electrical conduit, electrical cable, electrical services, and all miscellaneous hardware required to make an operational system per the specifications, as listed, complete to the satisfaction of the DEPARTMENT. The CONTRACTOR shall develop and furnish conceptual plans a minimum of 45 days prior to commencing fabrication/construction activities. The CONTRACTOR shall also provide as-built plans to include: directional bore logs, conduit offsets every 500', GPS data of device locations, all service and pull boxes, power metering points, mid span and reel end splices (three complete sets). An electronic copy of all GPS data will be turned in at the same time as as-built plans. Allocation drawing and Bentley Fiber data entry will be furnished by the Department as part of the integration.

The new 120 SMFOC (Fiber Optic Cable) shall be spliced in a newly installed service box to the existing 120 SMFOC near I-126 East, camera 11, near I-26 East Flyover and at an existing service box located at I-126 East, camera 9, Greystone Blvd Exit. The termination shall be a reel end splice at both locations.

IT SHOULD BE NOTED THAT THIS PROJECT WILL INSTALL A NEW 120 SMFOC AND ANY REFERENCE TO 144 SMFOC IN THE REMAINDER OF THIS DOCUMENT SHOULD BE REPLACED EXCEPT WHERE TYING INTO AN EXISTING 144 SMFOC.

Prior to commencing construction, the DEPARTMENT will remove all existing ITS cameras and cabinets only. THIS DOES NOT INCLUDE camera poles, cabinet bases, conduit, fiber, electric services, dynamic message signs and structures from the project.

The Department will furnish to the contractor local camera cabinets with control equipment and power supplies to be installed according to the specifications for INSTALL 332 AND SCIPCAB1 ITS CABINET ASSEMBLY.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The Supplemental Specifications provide detailed requirements for specific ITS components of this system. Elements of this ITS system to be shown in the conceptual design plans, and specified in the Supplemental Specifications, are briefly described as follows:

2. Spare parts: Per section 12 of the FURNISH AND INSTALL PERMANENT DYNAMIC MESSAGE SIGN STANDARD, section 3 of the FURNISH AND INSTALL CAMERA LOWERING DEVICE the CONTRACTOR shall furnish NEW spare parts as defined.
3. Training: Per Section 6 of FURNISH AND INSTALL FIBER OPTIC CABLE, AND Section 11 of FURNISH AND INSTALL PERMANENT DYNAMIC MESSAGE SIGNS, and MAINTENANCE OF TRAFFIC the CONTRACTOR shall furnish training as defined.
4. The Local Control Cabinet (332 or SCIPCAB1): Department furnished 332 Control cabinets shall be installed on preformed concrete bases, a SCIPCAB1 Control cabinets shall be installed on a concrete pedestal mounted at each specified field site as shown on the Plans. Control cabinets shall be used to house the field control and communications equipment required interfacing the CCTV components to the field hub cabinet communications control and communications system, closures, and traffic control center (TCC) equipment. Control cabinets include all of the equipment needed to interface the CCTV cameras and the communication system.
5. Service boxes: Service boxes shall be installed as shown on the plans, though not to exceed a maximum of 2450 foot spacing or as indicated on plans. Service boxes shall all so be installed at CCTV, Field Hub, Hub Buildings and other locations as needed for fiber optic splicing and cable management. Each service box shall have the SCDOT Fiber Optics logo cast in the lids. Each service shall have a passive marker ball operating at 101.4 KHZ orange in color. In cases were a service box is to be used for electrical cabling the lids shall have the SCDOT Electrical logo cast, and shall have a red passive marker ball operating at 169.8KHZ installed. At each service box locations, a PNA type marker post shall be installed (orange top for fiber optic and red top for electrical). GPS location shall be determined for all boxes installed and shown on as-built plans.
6. The Fiber Optic Backbone and Drop Cable: The fiber optic backbone shall be 144 fiber single-mode cable with twelve (12) buffer tubes with 12 fibers each. It shall be installed in a 2" conduit where shown. Splicing of the cable shall only be allowed at specified locations to be approved by the ITS Field Operations Manager. Buried backbone cable shall have orange marking tape above it and above ground cable markers at every service box. The drop cable or Gator patch shall also be single-mode and extend from 3M Brand splice closures to local cabinets. GPS locations shall be determined for all mid spans/reel end splices and shown on as-built plans No subsurface investigation has been done. It shall be the CONTRACTOR's responsibility to verify that the cable can be buried at specified depth using pre-plowing or other methods to be approved by SCDOT. New 144 SM fiber optic Backbone cable installed along I-126 shall be a Prysmian cable or approved equal and installed in accordance with the designated fiber allocations to be issued by the ITS Field Operation Manager. All terminations and splicing shall be in accordance with the designated fiber allocations to be issued by the ITS Field Operations Manager.

B. GENERAL PROVISIONS

1. All work under this Contract shall be performed under the latest editions of following standards:

THE SOUTH CAROLINA DEPARTMENT OF TRANSPORTATION, "STANDARD SPECIFICATIONS

FOR HIGHWAYS CONSTRUCTION", Latest Edition;

These SPECIAL PROVISIONS;

The "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES", "MUTCD - 2009 Edition";
The "INTELLIGENT TRANSPORTATION SYSTEM SPECIFICATIONS";

The "NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION (NEMA)";

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The “NATIONAL ELECTRICAL SAFETY COUNCIL (NESC)”;

The “ELECTRONIC INDUSTRIES ASSOCIATION (EIA);

The “NATIONAL ELECTRIC CODE (NEC)”;

The “United States Department of Agriculture Rural Utility Service (RUS)”;

The “AMERICAN SOCIETY OF TESTING AND MATERIALS (ASTM);

The “AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS (AASHTO)”, and

Any other standards, codes and ordinances that may apply.

2. Section numbers appearing in these SPECIAL PROVISIONS refer to the section numbers in the STANDARD SPECIFICATIONS referenced above.

MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES:

“The Contractor is hereby advised that the Department has adopted the MUTCD 2009 – Manual on Uniform Traffic Control Devices for use on all projects. All references to the South Carolina Manual on Uniform Traffic Control Devices (SCMUTCD) are hereby revised to read “MUTCD – 2009 Edition”.

C. CODES, LICENSES, & ABILITIES

1. All work shall be done in a workmanlike manner to meet the highest industry standards, all in accordance with the requirements of the latest editions of the National Electric Code (NEC), National Electrical Safety Council (NESC), the Illuminating Engineering Society (IES), American National Standards Institute (ANSI), National Electrical Manufacturer's Association (NEMA), and the regulations and standards of the local power company
2. The following supplements Section 102.1. The contracting firm responsible for the performance of the work covered by these SPECIAL PROVISIONS, must be licensed as a General Contractor with a Classification of Public Electrical Utility (2U) by the SC Licensing Board for Contractors, and possess all other sub-classifications and licensing as required by the SC LLR. Documentation of properly trained personnel for exothermic welding is required for all personnel performing exothermic welding. A copy of the documentation for exothermic welding shall be submitted to the Department.
3. Further, at least one ‘ON-SITE’ field supervisor shall have LEVEL II or higher, Fiber Optics for ITS Certification by the International Municipal Signal Association (IMSA). Photo copies of the license and certificate shall be submitted before work commences. Contractor personnel performing Fiber optic testing, splicing, terminating, and/or troubleshooting shall have Level II IMSA Fiber Optics for ITS or ETA FOI certification. The CONTRACTOR shall retain employee(s) holding the appropriate licenses to conduct this type of work for the duration of the project; and the employee(s) shall be present DAILY and at the FINAL INSPECTION. The CONTRACTOR shall submit the names and copies of these licenses and certifications to SCDOT prior to contract award.
4. The CONTRACTOR shall employ persons capable of installing all the components of this ITS project as described in the Plans and Specifications. The CONTRACTOR shall possess all the necessary equipment and be capable of using it to install, integrate and maintain all the ITS components into a functional system that will allow the SCDOT Traffic Control Center (TCC) operators and system supervisors to monitor, detect and verify incidents on the Interstate.

D. SYSTEM INTEGRATION

Furnished by the Department- includes cameras, camera pipe adaptors, encoders, fiber transceivers, fiber mux, and integration.

E. SUPPLEMENTAL SPECIFICATIONS

The ITS components shall be constructed in accordance with the detailed “SUPPLEMENTAL SPECIFICATIONS, and the plan details; which by reference are made a part of these SPECIAL

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

PROVISIONS. These documents may be obtained from the SCDOT, Director of Traffic Engineering, Advanced Systems Coordinator, P.O. Box 191, Columbia, SC 29202-0191.

F. SPECIAL INSTRUCTIONS TO CONTRACTOR

1. This is a "TURN-KEY" project. The plans will be field reviewed with the Contractor and SCDOT engineers before installation begins. Any field supervisor for the contractor must be at this review. The CONTRACTOR must devise/refine the final details, working within the Supplemental Specifications, the Design Details, the Standards, and with the ENGINEER. The ENGINEER must approve the Plans as submitted by the contractor before construction begins.
2. At project completion, all ITS components shall be complete and operational to the satisfaction of the ENGINEER.
3. The CONTRACTOR shall furnish and install conduit, service boxes, and stainless steel pull boxes where needed or as shown on the plans.
4. The CONTRACTOR SHALL FURNISH AND INSTALL ALL MATERIALS such as, EDCO surge suppressors, equipment racks, wood poles, fiber optic cables, electrical and coax cables, conduit, miscellaneous fittings, electrical service parts, clamps, ground rods, tape, fiber optic Siec or equivalent interconnect centers, and all other needed materials.
5. The CONTRACTOR SHALL INSTALL 332 base-mounted or SCIPCAB1 pedestal mounted cabinets as shown in the plans.
6. The CONTRACTOR will install all new ITS components to provide a state-of-art installation. The CONTRACTOR shall install a new METERED ELECTRICAL SERVICE indicated on the Plans. NOTE: the service may be either: underground or overhead; depending on the latest requirements of the power company. GPS locations shall be determined at each meter location and shown on as-built plans Bids should be prepared accordingly. The CONTRACTOR shall furnish and install ALL NEW ELECTRICAL CABLE.
7. In addition to the state requirements, all permits and licenses required by a City/County are the responsibility of the CONTRACTOR. The CONTRACTOR shall arrange with the utility company for hookup connections and attachment agreements.
8. Camera lowering devices shall be installed at all locations with CCTV unless otherwise indicated by SCDOT.
9. Submittal Data Requirements: The CONTRACTOR shall provide six (6) copies of complete and thorough submittal data for all components and materials of the Intelligent Transportation system (ITS) project with the Final ITS Plans. Work cannot begin on any part of the project until the RFC Plans are approved by the Department. The submittal data shall be furnished to the DEPARTMENT Project Engineer. Submittal data shall include complete technical and performance specifications on all hardware, materials and installation wiring/cabling to be performed on the ITS project. Each package of submittal data shall be neatly organized and separated by hardware item and shall contain an index of all submittal data documents included in the package. The index shall name each submittal data document, what ITS system component the document is submitted for, and the specific manufacturer model, part and revision number of the subject hardware or software item exactly as the item is proposed to be provided. Any submittal data document or documentary item that is not listed in the index shall not be accepted for review. Each package of submittal data shall address all of the components and materials necessary for a complete ITS system as spelled out in the specifications; separate submissions for individual ITS system components and materials are not permissible. Typical submittal data which is required for all ITS system components shall include, but is not limited to, manufacturer's specifications, operating/maintenance, troubleshooting manuals, schematic wiring diagrams with detailed parts lists, materials lists and assembly drawings for the components used on this project, camera control, acceptance testing procedures, and detailed warranty and guarantee information for each component.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

10. Contractor shall be responsible for new electrical and fiber optic cable locates during project. Contractor shall be responsible for locating PUPS tickets for all new electrical and fiber optic cable locates within the project area throughout the duration of the project.
11. Contractor is responsible for preventive maintenance on all new components with in the project. Preventive maintenance shall start upon notice to proceed. Preventive maintenance consists of cleaning cabinets, changing filters, weed and grass control, rodent control and repairs as needed. Preventive maintenance is to be performed every three months during project. New components installed shall be serviced every three months after installation until completion of project. Upon award of contract the Contractor will be given a Preventive maintenance checklist to be followed for servicing components. Preventive Maintenance check list shall be filled out for each CCTV, DMS sign, and Hub locations, and shall be turned in to the ITS Central Maintenance Facility for review.
12. **SUBMISSION OF REQUIRED DESIGN INFORMATION AND DESIGN DRAWINGS:**
It is essential that the signing contractor make all required design submissions within 90 days following award of this contract, except as follows:

Section 9.103 of Signing Specifications is amended to also require that design drawings for Overhead Sign Structures and the details of footings be submitted within 90 (ninety) calendar days following award of the contract.

Section 9.104 of the Department's SPECIFICATIONS FOR SIGNING EXPRESSWAYS AND FREEWAYS is revised to require that the independent registered Professional Engineer who checks the designs for the overhead structures and footings be licensed by the State of South Carolina.

OVERHEAD SIGN STRUCTURE DESIGN:

Section 9.101 of the Signing Specification is amended to require stiffener plates between the base plate of all cantilever structures and the upright. The plates should be equally spaced about the base plate between the anchor bolt holes. All structures shall have at least six (6) anchor bolts per base plate. Also, the Contractor shall provide direct bolted connections of the sign to the structure sign hangers at the top and bottom of the signs. This shall be provided at all four corners of the sign. The top hole on each hanger shall be slotted to provide for adjustment.

Soil borings are not provided for the locations of the new Overhead Structures. The Contractor will be responsible for obtaining subsurface investigation data at the locations of the overhead structures shown in the plans for the purpose of overhead structure footing design. Special Note: Footings shall be designed using a maximum allowable toe pressure of 2000 pounds per square foot.

G. ACCEPTANCE

This project requires a 30 (thirty) day burn in period. All equipment shall operate satisfactorily for a period of 30 calendar days prior to final acceptance of the project. Any items deemed non-operational in that time period will cause the burn in period to start over. The burn in period shall not begin until all equipment is installed and operational. The burn-in period shall not begin until a punch list, generated by the final inspection, is complete.

H. INSPECTION

1. Resident Construction Engineer (RCE): During construction of the ITS portion of the Project periodic Inspections will be made by the RCE and by the Department's ITS staff. The Department's RCE is the designated representative of the Engineer, for the purposes of this project.
2. Disputes: The CONTRACTOR is advised that in any dispute between the CONTRACTOR and the manufacturer, concerning the operation/maintainability/reparability of any piece of equipment, THE DECISION OF THE ENGINEER SHALL BE FINAL.
3. Faulty Equipment: The CONTRACTOR shall be responsible for the labor cost to remove and replace faulty equipment. The CONTRACTOR shall be responsible to have a replacement part in place no later than 24 hours from the reported failure of the equipment.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Any delay that is documented by the RCE as late or non-responsive by the CONTRACTOR in replacing the faulty equipment within the specified period of time shall be assessed at a \$500 PER DAY liquidated damages penalty.

I. MAINTENANCE OF TRAFFIC

The CONTRACTOR shall maintain traffic throughout the length of this Project as required by the Manual on Uniform Traffic Control Devices and other applicable SCDOT Standards for traffic control. As part of the plans, the contractor shall provide traffic control plans prior to beginning work. Any necessary lane closures will have to be approved by the ENGINEER two weeks prior closing the lane. Interstate lane closures shall be done only at night. Shoulder closures are required when work is performed within 30 feet of the travel way. This includes the parking of vehicles or equipment.

Should the CONTRACTOR believe a lane closure is necessary to perform the work specified herein, the CONTRACTOR shall submit to the ENGINEER a written request at least two (2) weeks in advance of the proposed closure. The request for lane closure shall include:

1. Date and times that the closure is required.
2. Reason for the closure, and why the work cannot be accomplished without the requested closure.
3. A plan showing the lane(s) to be closed, the extent of the closure, the work area, and the proposed signing and other traffic control devices to be installed by the CONTRACTOR for the maintenance and protection of traffic during the closure.
4. Date and time that the closure will cease and related signing and other traffic control devices will be removed and normal traffic control will be re-established.

The RCE shall review the request, and shall approve, reject, or identify modifications to the plan necessary for approval.

Training-

Training will be furnished as part of the Traffic Control bid item with no additional cost to the Department.

1. The Contractor will be required to furnish approved Supervisor and Advanced work zone traffic control training courses for up to ten (10) SCDOT employees, as part of Traffic Control. The Department reserves the right to allow others to attend training.
2. Training shall be scheduled on a date selected by ITS Field Operations Manager during the project (contractor should note that this training may be required at the beginning of the project however must be conducted prior to Substantial completion of ITS infrastructure for this contract.)
3. Work zone training will be conducted in accordance to the below specifications by a recognized organization.

Approved Work Zone Traffic Control Training Providers:

The SCDOT recognizes the following organizations as acceptable providers of an advanced work zone traffic control training program, a "Flagger Training" course or the optional basic work zone traffic control training course:

1. American Traffic Safety Services Association (ATSSA)
2. Institute for Transportation Research and Education at North Carolina State University (ITRE)
3. Carolinas Association of General Contractors (AGC)
4. National Safety Council - South Carolina Chapter

These organizations provide work zone traffic control training in compliance with the MUTCD and reference requirements specific to SCDOT. Therefore, work zone traffic control training provided

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

by entities other than those listed above are not considered comparable and shall be unacceptable.

Specific course material for work zone traffic control training courses designated as “Basic”, “Advanced”, “Supervisor” or “Flagger” and any additional training courses not specified here is determined by the work zone traffic control training course provider and has undergone review and received acceptance by SCDOT. Also, the passing score for each training course is determined by the work zone traffic control provider.

J. WEEKLY ITS SCHEDULE

For the duration of this project, the CONTRACTOR shall furnish on each Wednesday to the RCE, a WEEKLY SCHEDULE for the week to come, listing the location and date of each intended activity. This will permit scheduling ITS inspection personnel. Upon contractor not showing up nor notifying the Inspector of changes to the schedule there will be a penalty of \$500.00 per hour after the first hour of delay. Deviation from this schedule may cause the DEPARTMENT to delay inspection and payments.

K. MOBILIZATION

Description: This item shall consist of performing preparatory operations, including moving personnel and equipment to the project site; paying bonds and insurance premiums, establishing CONTRACTOR’S offices, buildings and other facilities necessary for work on the project and for all other work and operations which must be performed or cost incurred prior to beginning work on the project.

Construction Requirements: All work performed in providing the facilities and services shall be done in a safe and workmanlike manner.

L. FURNISH AND INSTALL CONDUIT

DESCRIPTION: This work shall consist of furnishing and installing conduit and fittings of the types and sizes specified herein, at locations shown on the Plans, or as established by the ENGINEER in accordance with these Specifications. All materials will be subject to inspection for condition by the ENGINEER, just prior to incorporation into the work.

1. MATERIALS: Materials shall meet the requirements listed below:

- a. Steel Conduit: Steel electrical conduit shall be rigid, heavy-wall, galvanized steel, meeting the requirements of Federal Specification WW-C-581, and American Standards Association Specifications USAS C-80.1-1966.
- b. PVC Conduit: Plastic conduit shall be sunlight resistant Polyvinyl chloride (PVC), SCHEDULE 80, meeting the requirements of National Electrical Manufacturing Association (NEMA) Specification TC-2 and Underwriter Laboratory (UL) Standards UL-514; and/or ASTM D-1784. Fittings shall meet NEMA TC-3 and UL-514. No quarter size conduit shall be used. Conduit sizes shall be as follows: 1 inch, 2 inch, 3 inch and so on.
- c. HDPE Rolled Conduit: Underground fiber shall be installed in rolled conduit, plowed or directional bored (trench less) in. Each run shall have one (1) conduit installed. This conduit shall be a minimum of schedule 80 or SDR 11 HDPE (HDPE shall be Orange in color for fiber optic cable installations and Red in color for electrical). It shall be buried at a minimum of 36”.
- d. Flexible Weather-Tight Steel Conduit: Weather-tight/liquid-tight flexible steel electrical conduit shall be single strip, helically wound, interlocking galvanized steel. It shall be made liquid-tight by an extruded polyvinyl chloride jacket; and shall meet the requirements of UL-360.
- e. Fittings: All conduit bodies, 90 degree bends, weatherheads, elbows, nipples, couplings, and other hardware shall be made of the same material and quality as the conduit run and shall be incidental to conduit installation. HDPE coupling shall be hydraulically pressed on type. HDPE couplings shall be Carlon Barbed couplings BS2.375 or approved equal. Catalog cuts are required for HDPE couplings for approval.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- f. Ground Bushings: Grounding bushings shall be threaded, made of malleable iron, galvanized steel, or brass; and shall have an insulating plastic insert, and lay-in lugs to hold No. 6 AWG copper wire.
 - g. Pulling Line: The pulling line shall be Muletape WP1250P or Detectable Muletape DT1250/4P, having a minimum strength of 1250 lbs, which SHALL BE PULLED INTO ALL UNDERGROUND CONDUIT RUNS, AND SHALL REMAIN THEREIN FOR FUTURE USE.
 - h. Warning Tape: Underground warning tape shall be heavy duty B-720 polyethylene, 0.89 mm (3.5 mils) thick, by 76 mm (3 inches) wide, with APWA color Orange for fiber and RED for electric lines. The tape shall be PLACED ABOVE ALL TRENCHED CONDUIT RUNS, just before the final back-fill.
 - i. Concrete: Concrete used for patching pavement shall be SCDOT STANDARD SPECIFICATION CLASS X according to Sections 701, 702, 703, and 704.
 - j. Bituminous Asphalt: Bituminous Asphalt for patching pavement shall be SCDOT STANDARD SPECIFICATIONS, Section 403.
 - k. Marking Wire: All underground conduits containing fiber optic cable shall have a four (4) conductor Detectable muletape type DT1250/4P pulled in for future locate services. The Detectable muletape shall be spliced through all junction points and grounded to a RUS 13 5/8"X8' ground rod in service boxes and connected to the ground buss in cabinets.
2. Construction Methods:
- General: Conduit shall be installed as either a riser, or be trenched, plowed or directional bored (trench less).
- a. Plans: All conduit shall be installed as trenched, plowed or riser unless specifically shown on the plans as or site determined by SCDOT as directional bored. Conduit off-set shall be performed every 500' and shown on as-built plans. Directional bore log indicating depth of conduit shall be shown on as-built plans.
 - b. Depth: Unless shown otherwise, conduits shall be placed a minimum depth of thirty-six (36) inches below surface grade, when approved by the Engineer a min. of 24" cover when rock is encountered, rock being defined in section 203.2.1.7 of the Standard Specifications of Highway Construction Edition of 2007, and shall slope at a minimum rate of 150 mm (six inches), per 30 meters (100 ft.) of length, to a service box hole or drain. All conduit runs shall be cleaned and swabbed before cables are installed. In poles, cabinets, and buildings, duct-seal shall be used to effectively seal the opening.
 - c. Direction: Changes in direction of conduit shall be accomplished by the use of standard bends, elbows, or by bending the steel conduit. Steel conduit, if bent, shall have a uniform radius that will fit the location, with a minimum radius of six (6) times the internal diameter of the pipe. Sharp kinks in the conduit or the substitution of unlike materials will not be permitted.
 - d. Fittings: Standard manufactured conduit bodies, condulets, weatherheads, elbows, nipples, tees, reducers, bends, couplings, expansion couplings, unions, etc., of the same materials and treatment as the straight conduit, shall be used as required throughout the conduit line except that weatherheads shall be malleable iron clamp on type Arlington Industries, Inc. catalog number 145 MFG number 00145 or approved equal. All fittings shall be tightly connected to the conduit. A solvent-weld cement shall be used for fitting connections with PVC conduit. Where steel conduit mates PVC, an adapter coupling shall be used and sealed waterproof. Where Metallic / Non-Metallic Flex mates PVC an approved adapter coupling shall be used. Where HDPE mates PVC a service box/pull box shall be installed.
 - e. Cutting: Nipples shall be used to eliminate cutting and threading where short lengths of conduit are required. Where it is necessary to cut and thread steel conduit, no exposed threads will be permitted. All conduit fittings shall be free from burrs and rough places; and all cut conduits shall be reamed before fittings and cables are installed. All conduit runs

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- ending in a junction box, hand box, or other approved junction point, shall be provided with a bushing to protect the cable from abrasion. Conduit being placed for future use shall be capped.
- f. Location: Where conduit passes under a curb, an 'X' shall be cut in the curb, over the conduit. Where there is no curb, a stake shall be driven in the ground at the end of the conduit to mark its location.
 - g. Riser: Attach conduit risers to wood poles; or where specified, to the outside of steel poles. Use stainless steel bands for steel poles. Use stainless steel or hot dipped galvanized conduit clamps/straps and galvanized screws on wood poles. Attachment shall be in accordance with the plans or Standard Drawings. Furnish each Riser with a weatherhead, which shall not be measured.
 - h. Trenching (Non-Paved Surface): Trenches shall be excavated to such depth as necessary to provide (24" minimum in rock, , rock being defined in section 203.2.1.7 of the Standard Specifications of Highway Construction Edition of 2007, when approved by the Engineer) 36 inches minimum cover over the conduit. Cinders, broken concrete, or other hard abrasive materials will not be permitted in the back-filling. The trench shall be free of such materials before the conduit is placed. Contractor shall supply approved back fill material as needed in such cases. No conduit shall be placed prior to inspection by the ENGINEER. Back-fill shall be compacted, and the surface restored.
 - i. Trenching (In Paved Surface): Trenches across driveways or streets shall be cleanly saw cut about 150 mm (six inches) wide. The conduit shall be placed and the back-fill shall be compacted, and the patch shall be of like material and thickness as was removed. NO additional payment shall be made for the bituminous or concrete patching material, unless a pay item has been established for such.
 - j. Bored and Jack (Pushing): Where shown on the Plans as bored or jacked, certain steel conduit to be placed under existing roadways, driveways, sidewalks, or other paved surfaces, shall be bored and jacked. Such conduit shall be placed by jacking, boring, pushing, or other means approved by the ENGINEER, without cutting or removing pavement.
 - k. Bored and Jack (Pulled): When the ITS design anticipates that high-accuracy directional boring techniques will be used, and two (2)- two (2) inch schedule 80 or SDR 11 HDPE conduits pulled back through the bore, then a pay item will be established for: SCHEDULE 80 PVC CONDUIT (trench less). The directional boring method shall be approved by the ENGINEER, and shall in no way crumple or damage the conduit.
 - l. Placed Before Pouring: Where shown on the Plans, PVC conduit, with flexible weather tight conduit, shall be placed in roadways or structures, prior to pouring the concrete. Typical usage would be a bridge deck. The conduit shall be firmly attached to the bottom reinforcement bar mat, or to the bottom wire-mat, using plastic tie-wraps every 0.60 meter (two feet). At expansion joints, 1.2 meter (four ft.) lengths (typical) of flexible weather-tight steel conduit shall be used to accommodate movement. These shall be installed to NEC standards for concrete structural installations and usage, including any recommended lubricants and sleeves. All conduit ends etc. shall be plugged to prevent concrete penetration. When used on a bridge, there will usually be service-box(es) near the centerline, and the conduit will terminate in service-boxes at each end.
 - m. Restoration: The CONTRACTOR shall restore all cuts, trenches, and openings to the original condition. Grass surfaces shall be replaced with pre-grown, cut turf (sod, in accordance to section 813 of the SSHC), in existing lawns. Seeding shall be performed in accordance to the Standard Specifications of Highway Construction Edition of 2007 as listed below. Other dirt areas shall be raked, seeded, and fertilized. While care should have been used to avoid them, any damaged trees and shrubs shall be replaced (if directed by the ENGINEER). See seeding with straw or hay mulch and sod specifications for restoration pay items.

- n. Method A: Seeding with Straw or Hay Mulch: Sow seed as specified in Method A of Subsection 810.4.11. Within 24 hours following covering of the seed, uniformly apply straw or hay mulch material at the rate of 2 tons per acre. Spread mulch by hand, by appropriate mechanical spreaders, or by blowers. Use mulch that allows sunlight to penetrate and air to circulate but also partially shades the ground and conserves soil moisture. To be paid at the line item for 8101000 Seeding (Mulched) MSY.
- o. Sod: Provide sod that consists of living, well-established growth, predominantly of the grass specified in the Special Provisions. Provide vigorous, well rooted, healthy turf, free from disease, insect pests, weeds, other grasses, stones, and any other harmful or detrimental materials. To be paid at the line item for: 8131000 Sodding MSY
- p. Rock Boring: When ITS design anticipates rock being encountered or the Engineer deems it necessary rock boring techniques will be used. The Rock Boring method shall be approved by the ENGINEER, and shall in no way crumple or damage the conduit.
- q. Bridge attachment: When attaching to a bridge, rigid galvanized steel conduit shall be used. Conduit supports and hardware shall be Stainless steel and installed using an approved epoxy anchor. Conduit supports shall be installed a maximum of 5 feet apart and bent closed at the bottom. Conduit straps shall be two hole heavy duty stainless steel. Conduit shall have approved heavy duty galvanized steel expansion couplings at every expansion joint in bridge. Approved in line stainless steel pull boxes shall be installed on bridge attachments for pull points that are over 500 feet at no additional cost to the Department. There shall be a service box set at both ends of bridge to make transition from PVC or HDPE conduit to ridged galvanized steel conduit for bridge crossing. All conduit, expansion couplings, couplings, conduit supports, bolts, nuts, anchors, epoxy, unions, and all other incidental material will be included in the pay item for LF Bridge attachment.
- r. Proofing: Prior to installing cable or fiber into conduit and Department acceptance the conduit must be proofed. Proofing the existing conduit ensures that all obstructions are cleared and that conduit continuity and alignment is good. A rigid mandrel designed for HDPE roughly 90% of the inner diameter of the conduit shall be used to perform the proof. Proofing conduit is typically performed by pushing or pulling a rigid mandrel attached to the end of a pull line or fiberglass rodder and pulled or pushed through the conduit. If the mandrel makes its way through the conduit without any difficulties experienced, then the conduit has “proofed out,” and no repairs should be necessary. If it does not make it through the conduit it must be repaired prior to installing cable or fiber and prior to acceptance. All conduit must be proofed prior to final acceptance.

M. EROSION CONTROL

- 1. Description: This section contains specifications for the materials, equipment, construction, measurement, and payment for the placement of temporary erosion control measures to prevent erosion and water pollution through the use of best management practices including the use of rolled erosion control products, silt fences, sediment tubes, and temporary seeding in conformity with the Plans the Specifications, SCDOT Standard Drawings, or as directed by the RCE.
- 2. Sediment Tubes: Sediment tubes are temporary erosion control devices installed along contours, in drainage conveyance swales, and around drainage inlets to reduce the effects of soil erosion and to retain sediment. Locations for installation will be designated on the Plans or by the RCE 8152007 Sediment Tube LF
- 3. Silt Fences: Construct the silt fence in accordance with Plans or SCDOT Standard Drawings or as approved by the RCE. Place silt fences before the major construction in an area is started.

Maintain the silt fence until its capacity has been reached or erosion activity in the area has stabilized. Remove sediment accumulated along the fence when it reaches approximately one-third of the height of the fence, especially if heavy rains are expected. Remove trapped sediment or stabilize on site.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Inspect the silt fence every 7 days. Immediately correct any deficiencies. Remove filter fabric and replace whenever it has deteriorated to such extent that it reduces the effectiveness of the silt fence. In addition, review daily the location of silt fences in areas where construction activities have changed the natural contour and drainage runoff to ensure that the silt fences are properly located for effectiveness. Install additional silt fences as directed by the RCE where deficiencies exist.

If a silt fence or portion of a fence is located in an area where removing the sediment is not possible, then install a second silt fence, if necessary, at the discretion of the RCE. In this case, payment for both silt fences and portions involved is made at the unit price for silt fence.

Remove silt fence within 30 days after final stabilization is achieved or after temporary Best Management Practices (BMP) are no longer needed. Permanently stabilize disturbed areas resulting from fence removal. The fence materials remains the property of the Contractor and may be used at other locations provided the materials meet the appropriate requirements contained in this specification and/or on the Plans.

Silt Fence LF

Replace/Repair Silt Fence LF

4. Turf Reinforcement Matting (TRM)

- a. Type 1: Provide a Type 1 TRM consisting of a web of mechanically or melt bonded polymer netting, monofilaments or fibers entangled to form a strong three-dimensional stable net structure utilizing bonding methods including polymer welding, thermal or polymer fusion or the placement of fibers between two high-strength biaxial oriented nets mechanically bound by parallel stitching with polyolefin thread. The RCE may allow a degradable fiber matrix to be used to provide immediate coverage for bare soil.
- b. Type 2: Provide a Type 2 TRM consisting of a web of mechanically or melt bonded polymer netting, monofilaments or fibers that are entangled to form a strong three-dimensional stable net structure utilizing bonding methods including polymer welding, thermal or polymer fusion or the placement of fibers between two high-strength biaxial oriented nets mechanically bound by parallel stitching with polyolefin thread. The RCE may allow a degradable fiber matrix to provide immediate coverage for bare soil.
- c. Type 3: Provide a Type 3 TRM consisting of a web of mechanically or melt bonded polymer netting, monofilaments or fibers that are entangled to form a strong three-dimensional stable net structure utilizing bonding methods including polymer welding, thermal or polymer fusion or the placement of fibers between two high-strength biaxial oriented nets mechanically bound by parallel stitching with polyolefin thread. Do not use a TRM manufactured from discontinuous or glued netting in this category. Ensure that the material is 100% synthetic and resistant to biological, chemical, and ultraviolet degradation.
- d. Type 4 (High Survivability): Provide a Type 4 TRM consisting of a geosynthetic matrix that exhibits a very high interlock and reinforcement capacities with both soil and root systems, demonstrates a high tensile modulus, and is specially designed for erosion control applications on steepened slopes and vegetated waterways. Do not use a TRM manufactured from discontinuous netting, netting loosely held together by stitches or glue, or composites. Ensure that the material is 100% synthetic and resistant to biological, chemical, and ultraviolet degradation. Furnish a Type 4 TRM with high loading and/or high survivability capabilities for field conditions such as long term maintenance, structural backfills protecting critical structures, utility cuts, and traffic areas with the potential for high abrasion, higher required factors of safety, and/or general durability concerns

Turf Reinforcement Matting (TRM) Type1 MSY

Turf Reinforcement Matting (TRM) Type2 MSY

Turf Reinforcement Matting (TRM) Type 3 MSY

Turf Reinforcement Matting (TRM) Type4 MSY

N. FURNISH AND INSTALL ELECTRIC SERVICE

Description: This work consists of furnishing and installing complete electrical services to provide electric power to the ITS components, at locations shown determined by the contractor and SCDOT, and in accordance with power company procedures. GPS locations shall be provided at each meter location and shown on as-built plans. This includes all necessary poles, conduit and incidentals. Contractors are advised that location may require long conduit runs for power. These runs SHALL be included in the "ELECTRICAL SERVICE".

1. GENERAL

- a. Standards: All work is to be in accordance with the Standards, or the REQUIREMENTS OF THE LOCAL POWER COMPANY. All work shall be in accordance with the National Electric Code (NEC), and applicable local codes.
- b. Meeting: The ENGINEER, the CONTRACTOR, and the power company representative shall discuss the project at the "Pre-Construction Meeting", and arrange the schedule for power connection. Additional meetings will be held as necessary to satisfy all concerns about electrical service.
- c. Schedule: The CONTRACTOR shall make all necessary arrangements with the power company to insure having the needed power available at each location. Difficulties in securing the service of the power company are to be immediately reported to the ENGINEER.
- d. Location: The CONTRACTOR shall determine the exact location of the electric service. When a wood pole is to be used for power company attachment and meter base, the pole shall be set within 15 feet of the cabinet or device it's feeding. Engineer shall approve final location of service pole prior to installation. The nature of the service is not shown on the Plans, and shall be finalized as:
 - 1) Electrical service from the power head to the local cabinet assembly;
 - 2) Electrical service from the local cabinet assembly to the field hub;
 - 3) Electrical service from the power panel to the Hub building.
- e. Meter: The electric service will usually be METERED. The CONTRACTOR shall provide hardware accordingly.

O. MATERIALS

The power connection shall be 100 amp SINGLE-PHASE, 120/240 VOLT, 3-WIRE, 60 Hertz alternating current supply for CCTV/Hub cabinets and DMS signs. The power connection shall be 200 amp Single Phase, 120/240, 60 Hertz alternating current supply for Hub Buildings.

- 1. Meter: The contractor shall furnish a Mid- West R102EN METER BASE/POWER PANEL (CAN) or as indicated on plans, for the CCTV cabinet or Field HUB cabinet, a Cutler hammer MB816B200BTS Meter base/power panel for Hub building, which the CONTRACTOR shall install. Contractor shall install an EDCO EMC-240B surge arrestor on the power panel at all metering locations and shall be wired according to manufactures spec.
- 2. Disconnect Switch: The disconnect switch shall be NEMA STANDARD TYPE 3R, weatherproof. It shall be CIRCUIT BREAKER TYPE, 100 AMP rated and have a tab for pad-locking the cover closed. It shall be of 3-WIRE DESIGN (2-circuit), with solid neutral. Disconnect switch shall be a Siemens Model WO408ML1125 or approved equal or as indicated on the plans. The CONTRACTOR shall twist a No. 6 AWG wire through the padlock tab, to prevent unauthorized entry (until SCDOT installs their padlock). Pedestals (or lintels) for services or disconnect switch shall be an 8"X8"X96" Allied Concrete Products Lintels or approved equal, whenever possible the same Pedestal shall be utilized for the installation of the disconnect and the SCIPCAB1 cabinet assembly. If the Power company metering location is greater than 100 feet from the cabinet or is placed on the opposite side of the road, a disconnect switch shall be installed on a concrete

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

pedestal not greater than 15 feet from the cabinet. The disconnect switch shall have a 100 AMP rating and shall be a circuit breaker type. In cases where one meter location is going to feed two ITS devices, the breakers shall be sized to accommodate both devices.

3. Rating: To provide a maximum of future flexibility, and a minimum of voltage-drop to meter/power panel, the components of the electrical service shall have the ratings stated. (Shall be wired to supply a min. of 100 amp 120/240 volt service at meter).

4. DISCONNECT BREAKER:

Panel rating: (for uniformity) 100 AMP (200 AMP for Hub Building)
Circuit breaker (single pole) 30 AMP Camera or as indicated on the plans
Circuit breaker (double pole) 50 AMP DMS

(If needed an additional circuit breaker may need to be installed for AC or future use).

5. CABLE:

3-Wire THHN/THWN – MIN SIZE No. 2/0 AWG copper (Hub Building)

3-Wire THHN/THWN – MIN SIZE No. 4 AWG copper (from meter to power company attachment)

3-Wire (W, BL, RD), THHN/THWN – MIN. SIZE No. 10 AWG copper or as indicated on the plans (from power panel to CCTV/Hub cabinet)

(Wire size to be determined by the length of run and voltage drop according to NEC to supply 100AMP to all meter panels (except Hub Building), , breaker sizes shall be 50 AMP to DMS signs, 30 AMP to CCTV cabinet or as indicated on the plans, 50 AMP to Hub cabinet and 200 AMP to Hub building).

6. CONDUIT:

PVC Schedule 80 – MIN. SIZE 25 mm (1 in.)

(Conduit size shall be determined by the conductor size; NO quarter or half size conduit).

7. Ground Rod: One or more ground rods shall be installed at the service pole; and where applicable, at the controller itself. The ground rod shall be min. 16 mm by 2.4 meters (5/8 in. by 8 ft.) (minimum), copper-clad RUS 13, with brass or bronze ground rod clamp. Additional ground rods may be needed to achieve proper resistance to ground (not to exceed eight ground rods). The controller ground rod shall be exothermically welded (by personnel properly trained to make exothermic welds). Grounding system shall be no greater than 15 ohms. Grounding systems shall be tested using the fall of potential method and shall be overseen by the engineer.

8. Ground Wire: The grounding wire for the service shall be No. 6 AWG, bare, 7 stranded wire. (Note that this is in addition to the solid grounding wire running down each wooden pole and shall be stapled at a min of every 16 inches with a coil of solid copper wire at the bottom and top of pole.) For grids the ground wire shall be #4 AWG (7) seven stranded or larger around concrete poles and # 2 or larger around Hub Buildings. The grounding for the service shall be connected to the cabinet ground rod with AWG 6 and the pole ground grid shall be connected to the cabinet ground rod in the electric service pull box, (located at the cabinet) to make up a complete grounding system.

9. Conduit: Conduit and fittings used for the electric service shall be PVC Schedule 80, MIN. Size 25 mm (1 in.) diameter. Contractor shall use 1 inch, 2 inch, 3 inch, etc. conduit sizes. No quarter or half size conduit shall be used. It shall extend from the point of power company attachment, through the meter and disconnect assembly, to the controller cabinet (See FURNISH AND INSTALL CONDUIT Specifications). All HDPE pipe to be used for electrical underground service shall be RED in color.

10. Weatherhead: A weatherhead mating to the above conduit shall be used with overhead service connections. Weatherhead shall be malleable iron clamp on type Arlington Industries,

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Inc. catalog number 145 MFG number 00145 or approved equal. Also used shall be a strain Clevis, to create a 200 mm (1 ft.) minimum drip loop.

11. Cable: The electrical cable installed from the point of power company attachment to the Communication Local Cabinet or the Communication Hub Cabinet, shall be: Type THHN/THWN, sized per length of run and voltage drop and above table, 3-WIRE, (white, black, red) 600 Volt, copper only, stranded, with cable lugs. Wire sizes AWG 6 and smaller shall have colored insulation (Red, Black, White, and Green). Wire sizes larger than AWG 6 shall be marked with phasing tape (Red, Black, and White) at every termination point. Grounding conductors shall be bare copper or have Green insulation. At no place shall the non-metered service cable be in the same conduit as any other control and or electric cables.
12. Hardware: All hardware used shall be rustproof: steel parts shall be stainless steel or Hot Dipped galvanized. Stainless steel $\frac{3}{4}$ " bands shall be used for attachment to steel/concrete poles. The bands are to be spaced every 1.0 meter (3 ft.) maximum. When specifically required by the utility company or on wood poles, stainless steel conduit or Hot Dipped galvanized clamps/strap, fastened with hot dipped galvanized or stainless steel screws, may be substituted for the bands. A neutral spool bracket shall be furnished and installed by contractor for the power company attachment (house knobs are not acceptable).
13. Power Service Assembly: Lightweight corrosion resistant aluminum construction (painted gray). 14 gauge galvanized post with high quality electro-deposition gray paint finish. UL listed NEMA 3R construction. 10,000 AMPS RMS symmetrical short circuit rating, 22,000 AMPS rating available when appropriate 22,000 AIC breaker is field installed. 100 AMP (200 amp for hub buildings) continuous, 120/240 V single phase 4 jaw ring type meter socket. Loop feed 350 KCMIL single phase line terminals as standard. Main breaker (bolt in main on 200 amp service), convertible 2 circuit load center, or 12 circuit plug-in load center. Lockable, sealable covers provided with stainless steel latches. Parallel wired units are copper bussed from the meter socket to the load center. Multi-breaker UL listed accepts GE, Bryant, Challenger, Westinghouse, Square D. "Homeline" or ITE plug-in circuit breakers. Dead front construction for maximum user safety. Fully accessible line terminal compartments.
14. Pull Box: A 17"X30"X28" pull box shall be installed within five (5) feet of cabinet location. The pull box shall be an Armorcast A6001640TAPCX28, 17"X30"X28" or approved equal. See Furnish and Install Service/Pull Box. Electrical pull boxes shall not be placed over 500' feet apart without Department approval. All pull boxes containing electrical cable shall have SCDOT ELECTRIC logo caste on lids. All pull boxes containing electrical cabling shall have a PNA dome pack post cable marker 3" in dia, 6' long with a 16" Red top with approved labeling and phone number (labeling information and phone number to be supplied by Engineer for each project) or approved equal. There shall be a Red passive marker ball operating at a frequency of 169.8KHZ installed in all pull boxes containing electrical conductors. The red passive marker balls shall be compatible with a Metro Mark passive marker locator 760Dx or approved equal. GPS location shall be provided for all boxes installed and shown on as-built plans.

P. CONSTRUCTION METHODS

1. The electrical service shall be installed in accordance with all applicable codes, regulations, and the REQUIREMENTS OF THE POWER COMPANY, with the final location being determined in the field. Typical construction methods are shown on the Installation Details, and the Standards.
2. The CONTRACTOR shall obtain all ELECTRIC PERMITS required; and shall arrange for INSPECTION at completion.
3. The CONTRACTOR shall install the power service and post locations as shown on the Plans at the back edge of the right-of-way. The power company will supply power to the power service.
4. At locations where need is determined by the contractor, transformers shall be installed to compensate for voltage drops in service. All work to comply with the NEC.

Q. EQUIPMENT POWER

1. Normal: For equipment for this Contract, (while operating from a 115 VAC, \pm 10%, sixty (60) Hz, commercial grade, non-dedicated power service), shall be capable of providing the following:
 - a. Proper regulation for AC outputs, up to one-hundred and fifty percent (150%) of normal load.
 - b. Sufficient internal electronic noise and transient immunity, so that equipment fed by this service will not be affected by either noise or transients.
 - c. Equipment power supplies of sufficient design to prevent extraneous coupling of signals between equipment.
 - d. Complete internal surge protection (in addition to that of the cabinet).
 - e. Additional: Where electronic problems can be traced to Radio Frequency Interference (RFI), as shown by an oscilloscope, then the CONTRACTOR shall provide additional isolation, filters, capacitors, etc. to eliminate the problem.

R. GROUND SYSTEM

The resistivity of the electrical system EARTH GROUND shall be FIFTEEN (15) OHMS OR LESS, as measured with an appropriate instrument which was calibrated not more than twelve (12) months prior to the date of performing such tests. Test shall be over seen by Engineer and documented results given to DOT. Contractor shall add appropriate grounding to achieve the above requirements if needed (not to exceed eight ground rods).

CATALOG CUTS ARE REQUIRED

S. FURNISH AND INSTALL FIBER OPTIC CABLE

1. DESCRIPTION:

This item shall consist of furnishing and installing single-mode fiber optic (SMFO) cable in conduit and risers or overhead lashed to new messenger cable. The pay item FURNISH AND INSTALL FIBER OPTIC CABLE also includes all items and expenses associated with the items labeled FIBER OPTIC COMMUNICATION PLANT – TESTING, FURNISH AND INSTALL FIBER INTERCONNECT CENTERS AND CLOSURES. The CONTRACTOR shall furnish all attachment hardware, splice enclosures and installation guides necessary to install the fiber optic cable. Cable shall be Prysmian FlexLink matching the existing Prysmian 144 SM fiber. Contractor shall have index of refraction labeled on as-built for all fiber cable.

2. General:

The cable shall meet all requirements stated in RUS-90 as well as those stated within this specification. The cable shall be an accepted product of the United States Department of Agriculture Rural Utility Service as meeting the requirements of RUS-PE-90. The cable shall be new, unused, and of current design and manufacture.

The single-mode fiber used in the cable shall conform to the following specifications:

Fiber Coating	Corning CPC6 or approved equal
Cladding Diameter:	125.0 + 1.0 μ m by fiber end measurement
Outer Coating Diameter	245 \pm 5 μ m
Core-Clad Concentricity	\leq 0.5 μ m
Cladding Non-Circularity:	\leq 1.0%
Fiber Curl	\geq 4.0m radius of curvature
Index of Refraction 1310/1550 nm	1.4693/1.4690

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Mode field diameter – 1310	9.2 ± 0.4 μm
Mode field diameter – 1550	10.5 ± 1.0 μm
Cable Cutoff Wavelength	ccf ≤ 1260nm
Refractive Index Profile	Matched clad, step index
Zero Dispersion Wavelength	1304nm ≤ ±o ≤1324 nm
Zero Dispersion Slope	<0.092 ps/(km-nm)
Dispersion 1330 nm	<3.5ps/(nm-km)
Dispersion 1550 nm	<18ps/ (nm-km)
Point Discontinuity	≤0.10 dB at 1310 and 1550 nm
Attenuation at Water Peak (Uncabled Fiber)	<1.5 dB/km at 1383 ± 3nm
Attenuation vs. Wavelength	1285 ≤ 1310 ≤ 1330nm – 0.05 dB/km 1525 ≤ 1550 ≤ 1575 nm – 0.05 dB/km
Attenuation vs. Bending	1 turn (32 mm) at 1550nm ≤ 0.50 dB 100 turns (50mm) at 1550nm ≤ 0.10dB
Polarization Mode Dispersion Coefficient	≤ 0.2 ps/√km
Temperature Cycling	≤ 0.05 dB/km (-40 C to 85 C)
Temperature-Humidity Cycling	≤ 0.05 dB/km – 10 C to 85 C, 4 to 98% RH
Water immersion, 23 C	≤ 0.05 dB/ km
Heat Aging, 85 C	≤ 0.05 dB/ km
Proof Test	≥ 100 kpsi

3. Fiber Characteristics

All fibers in the cable shall be usable fibers and meet required specifications.

All optical fibers shall be sufficiently free of surface imperfections and inclusions to meet the optical, mechanical, and environmental requirements to this specification. Each optical fiber shall consist of a doped silica core surrounded by a concentric silica cladding.

The coating shall be a dual-layered, UV cured acrylate applied by the fiber manufacturer. The coating shall be capable of being mechanically or chemically striped without damaging the fiber.

Optical fibers shall be placed inside a loose buffer tube.

EIGHT through TWELVE (8-12) buffer tubes, each containing twelve (12) single-mode fibers shall be furnished. The fibers shall not adhere to the inside of the buffer tube.

Each fiber shall be distinguishable from each other by means of color coding according to the following.

These colors shall meet EIA/TIA-598, “Color Coding of Fiber Optic Cables”.

Buffer tubes containing fibers shall also be color coded with distinct and recognizable colors according to the following.

- 1. Blue**
- 2. Orange**
- 3. Green**

- 4. **Brown**
- 5. **Slate**
- 6. **White**
- 7. **Red**
- 8. **Black**
- 9. **Yellow**
- 10. **Violet**
- 11. **Rose**
- 12. **Aqua**

Buffer tubes shall be of a dual-layer construction with the inner layer made of polycarbonate and the outer layer made of polyester. Fillers may be included in the cable core to lend symmetry to the cable cross-section where needed.

Each buffer tube shall be filled with a non-hygroscopic, electrically non-conductive, homogenous gel. The gel shall be free from dirt and foreign matter. The gel shall be readily removable with conventional non-toxic solvents. Water blocking tape is an acceptable substitute.

Buffer tubes shall be stranded around a central member using the reverse oscillation, or "SZ" stranding process.

Binders shall be supplied with sufficient tension to secure the buffer tubes to the central member without crushing the buffer tube. The binders shall be non-hygroscopic, non-wicking (or rendered so by the flooding compound), and dielectric with low shrinkage.

The cable shall contain a central member that is intended to prevent buckling of the cable. The central anti-buckling member shall consist of a glass reinforced plastic rod.

The cable shall contain at least one (1) ripcord under the sheath for easy sheath removal.

Tensile strength shall be provided by high tensile strength aramid yarns and fiberglass. The high tensile strength aramid yarns/fiberglass shall be vertically stranded evenly around the cable core. All cable shall be sheathed with medium density polyethylene. The minimum nominal jacket thickness shall be 1.4 mm. Jacketing material shall be applied directly over the tensile strength members and flooding compound. The jacket or sheath shall be free of holes, pits and blisters.

The maximum pulling tension shall be 2700 N (600 lbs.) during installation (short-term) and 600 N (135 lbs.) long-term installed.

The shipping, storage, installation and operating temperature range of the cable shall be – 40° C to 70° C.

4. Drop Kit

When specified on the Plans, the CONTRACTOR shall furnish and install all necessary items required for connectivity of a device to the network via fusion splice of a drop cable to the network trunk cable. This assemblage of items shall be known as a drop kit. The drop kit consists of the drop cable assembly, fiber optic splice closure, termination's splices and splice trays. **The "Gator Patch" product is acceptable for this application. Gator Patch if used takes the place of the interconnect center.**

5. Quality Assurance Provisions

All optic fibers shall be proof tested by the fiber manufacturer at a minimum load of 100 kpsi.

All optical fibers longer than 1,000 meters shall be 100% attenuation tested by the manufacturer. The attenuation of each fiber shall be provided with each cable reel. Fibers less than 1,000 meters shall be tested for continuity.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

6. Splice Closure – Underground

- a. Use: The closure shall be 3M brand only no exceptions, designed for use under the most severe conditions such as moisture, vibration, impact, cable stress and flex temperature extremes as demonstrated by successful passing the factory test procedures and minimum specifications listed below. The closure will be installed inside service boxes. For more details see FURNISH AND INSTALL SERVICE BOXES. The closures shall be incidental to the fiber optic cable installation.
- b. Physical Requirements
 - 1) The closure shall handle up to four (4) cables in a butt configuration. A butt adapter may be used to increase capacity to six (6) cables.
 - 2) The closure shall prevent the intrusion of water without the use of encapsulate.
 - 3) The closure shall be capable of accommodating splice organizer trays, which accept mechanical, fusion, or multi-fiber array splices. The splice closure shall have provisions for storing fiber splices in an orderly manner, mountings for splice organizer assemblies; add space for excess or non- spliced fiber. Splice organizers shall be re-enterable. Splice cases shall hold a minimum of two (2) splice trays to a maximum of six (6) splice trays, with each tray housing 24 splices.
 - 4) Closure re-entry and subsequent reassemble shall not require specialized tools or equipment. Further, these operations shall not require the use of additional parts.
 - 5) The splice closure shall have provisions for controlling the fiber bend radius to a minimum of 38 mm.

7. CERTIFICATION: The CONTRACTOR shall provide certified test results from the manufacturer showing the cable furnished has been tested. The test shall be approved by SCDOT prior to its implementation. **Note: Catalog cuts shall be submitted at pre-con.**

8. LABELING AND DELIVERY

The SMFO cable furnished by the CONTRACTOR shall be packaged on non-returnable wooden reels. The reels shall not contain imperfections such as broken flanges or nails that may cause damage to the cable as it is unreeled.

Both the top and bottom ends of the cable shall be available for testing on the reel. The ends of the cable shall be sealed to prevent the ingress of moisture.

9. CONSTRUCTION METHODS

a. General

The CONTRACTOR shall take every precaution to ensure the fiber optic cable is not damaged during storage and installation. The fiber optic cable shall not be stepped on by workers, or run over by any vehicle or equipment. The fiber optic cable shall not be pulled along the ground, or over or around obstructions.

It shall be the responsibility of the CONTRACTOR to coordinate his overhead and underground construction activities on a continuing basis with each of the utility agencies that have facilities in the immediate vicinity.

The fiber optic cable shall be installed in conduit with other cables only where specifically called out in the Plans.

Where fiber optic cable is to be installed on overhead poles, the CONTRACTOR shall exercise care in temporary placement of installation equipment to provide safety to the public and to prevent damage to existing facilities. Should the CONTRACTOR cause damage to any existing cables and/or equipment, the CONTRACTOR shall immediately notify the ENGINEER. The affected owner and the CONTRACTOR shall repair or have the repair made at no additional cost.

During installation, the CONTRACTOR shall provide cable blocks at least every 50 feet to guide the cable and reduce pulling tension. All pulling equipment and hardware

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

that will contact the cable during installation must maintain the minimum bend radius of the fiber optic cable as listed in Table 1. Corner blocks, appropriately sized to ensure that the minimum bending radius of the cable is maintained, shall be provided whenever fiber optic cable must be pulled around a corner.

Table 1
Fiber Optic Minimum Bend Radius Chart

Nominal Cable Diameter		Minimum Bend Radius (no tension) Installed		Minimum Bend Radius (under tension)	
Millimeters	Inches	Centimeters	Inches	Centimeters	Inches
6.0 – 10.0	(1/4 – 3/8)	10.0	(4.0)	15.0	(6.0)
10.1 – 15.0	(4/10 – 6/10)	15.0	(6.0)	22.5	(9.0)
15.1 – 20.0	(10/16 – 8/10)	20.0	(8.0)	25.0	(10.0)
20.1 – 23.0	(13/16 – 9/10)	23.0	(9.0)	25.0	(10.0)
23.1 – 25.0	(15/16 – 1.0)	25.0	(10.0)	30.0	(12.0)

In the case where the plans call for fiber optic installations in conduit, the fiber optic cable shall not be pulled through any intermediate junction box, manhole, pull box, pole base or any other opening in the conduit unless specifically required by the ENGINEER in specific facilities. The necessary length of cable to be installed shall be installed from one junction box, manhole, pull box, pole base, or cabinet to the immediate next downstream manhole, box, pole base, or cabinet. The remaining length of cable to be installed in the next conduit shall be carefully stored in a manner that is not hazardous to vehicular traffic, yet ensures that no damage to the cable shall occur. The cable shall be stored in a manner that shall allow that length of cable to be safely pulled into the next conduit. The ENGINEER shall approve the storing methods to be used.

Cable reel lagging shall remain on the cable reels until they arrive at the pulling site. If the lagging has been removed, the CONTRACTOR shall securely fasten the cable ends to avoid damage during transit.

If the cable must be unreeled during installation, the “figure-eight” configuration shall be used to prevent kinking or twisting of the fiber optic cable. The preferred size of the “figure-eight” is 15 feet with each loop about eight (8) feet in diameter. The fiber optic cable shall not be coiled in a continuous direction except for lengths of 100 feet or less.

In case of aerial installations, the CONTRACTOR shall not increase the tension on the messenger cable to which the fiber optic cable has already been lashed.

At the completion of a day’s installation, the CONTRACTOR shall protect the cable from the ingest of moisture by placing a cable cap and/or several wraps of tape on the tip of the cable.

The CONTRACTOR shall record the cable meter marks at the fiber splice points on a set of as-built Plans. Two (2) copies of the Plans showing the meter marks shall be provided to the RCE. The meter marks are most easily obtained while forming drip loops.

For aerial installations (when approved by SCDOT), the CONTRACTOR shall route the fiber optic cable on the inside of messenger intersections at dead ends and crossovers.

b. Aerial Installation

1) General

All fiber optic cable installation shall be in buried conduit.

c. Underground Installation

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Where shown on the Plans, the fiber optic cable shall be installed in new or existing underground conduit, 36" deep. Typically, the drop cable from the backbone to the local cabinets is installed in one 2 inch schedule 80 PVC, or as indicated on the Plans.

1) Conduit

Conduit size and type are specified on the Plans. For additional information concerning conduit see FURNISH AND INSTALL CONDUIT. This section concerns the procedure for installing cable inside the conduit.

Seven (7) days prior to the installation of fiber optic cable in conduit is performed, the CONTRACTOR shall provide the RCE with four (4) copies of the cable manufacturer's recommended and maximum pulling tensions. Included with these pulling tensions shall be a list of the cable manufacturer's approved pulling lubricants. Only those lubricants in the quantity recommended by the fiber optic cable manufacturer shall be approved for use.

When installing the cable in underground conduit, the maximum allowable pulling tension for the cable installation by the CONTRACTOR shall not exceed 70 percent of the manufacturer's maximum pulling tension. If the cable is pulled by mechanical means, a dynamometer (clutch device) approved by the ENGINEER shall be used to ensure that a maximum allowable pulling tension is not exceeded at any time during installation.

Fiber optic cable shall not be pulled over edges or corners, over or around obstructions or through unnecessary curves or bends. Approved cable guides, feeders, shoes and bushings shall be used to prevent damage to the cable during installation.

Sealing bushings rather than weatherheads shall be used on all risers containing fiber optic cable. The sealing bushings shall conform to the typical detail shown.

Conduit bends and cabinet entrance fittings used by the fiber optic cable network shall be designed to accommodate the bending radius limitations of the fiber optic cable used.

The CONTRACTOR shall pull an adequate amount of fiber optic cable into the various cabinets and service boxes. The following table shows the amount of slack cable that should be provided in the various type cabinets and service boxes:

a) Local cabinet	50 feet
b) SCIPCAB1	3 feet
c) Field hub cabinet	50 feet
d) Service boxes	100 feet
e) Hub building	100 feet

The length of slack for each of these cabinet types should be divided evenly between entering and exiting cable. For example, the field hub cabinet should have 50 feet of slack on the entering cable and 50 feet of slack on the exiting cable for a total of 100 feet. If service box is within 50 feet of local or hub cabinet, the cable slack can be cut in half in the cabinets. Service boxes and hub buildings should have 100 feet of slack on the exiting and 100 feet of slack on the entering cable for a total of 200 feet. When Gator Patch cables are used in local cabinets there should be 25 feet of slack in cabinet (for SCIPCAB1 there shall be no more than 3 feet of slack) and 100 feet of slack entering into the service box. Maintenance loops should follow the same cable slack measurements listed for service boxes. After the fiber optic cable has been spliced, the cable shall be neatly coiled (with tie-wraps placed on the cable) and placed on top of the fiber interconnect center or on the bottom of the cabinet. The cable shall be readily accessible to enable maintenance personnel to perform splicing of the cable in a vehicle located near the controller cabinet.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

All metal conduits shall be grounded. All conduit, terminal cabinets, anchor bolts and reinforcing bar cages shall be made mechanically and electrically secure to form a continuous system and shall be effectively grounded. The grounding or bonding conductor shall be #6 AWG bare stranded copper wire.

Bonding of metallic conduit in service boxes and other installations, where the conduit is not coupled, shall be coupled with metallic conduit ground bushings having smoothly rounded, molded, insulated inserts and bonding jumpers.

The CONTRACTOR shall furnish and install all grounding facilities.

2) Buried Cable Markers

Buried cable markers shall be located along the buried cable line at locations shown on the Plans and/or shall be placed at every service box and not more than every 2450 feet apart. The marker shall be a PNA dome pack post cable marker 3" in dia., 6' long with a 16" orange top with approved labeling and phone number (labeling information and phone number to be supplied by Engineer for each project) or approved equal. An Orange passive marker ball shall be placed in every service box containing fiber or communications cable with a frequency of 101.4KHZ, that is compatible with a MetroMark passive marker locator 760Dx or approved equal.

10. SPECIAL INSTRUCTIONS TO CONTRACTORS

- a. Fiber optic cable, of the type and size specified, will be measured by the linear foot of cable actually furnished and installed, completely in place and accepted, using an optical time-domain reflectometer (OTDR).
- b. The jacket shall have "Grabber" brand cable (stock no. VF0G – 07) markers. The markers shall be six (6) inches long, orange in color and read as follows in black: "SCDOT FIBER OPTIC CABLE (803) 737- 1893". Two Grabber brand cable markers shall be placed on cable in each service box and shall be visible when the lid is removed. For aerial installation, the cable markers shall be placed on each side of every pole approximately two (2) feet from the pole. The CONTRACTOR shall install three (3) additional markers on the cable between the poles, spaced equally apart along the span.
- c. The SMFO cable shall be spliced only at those points shown in the Plans or as approved by the ITS Field Operations Manager, (minimum distance between reel end or end to end splices shall be no less than 15,000 feet of cable length). Back bone cable shall not have intermediate splices and all drop cables shall connect to the back bone cable using mid-span entry. The designated splices shall be in the fiber interconnect centers that are proposed for installation in the field hub cabinets, ITS hub and at service boxes as designated on the Plans. If fiber optic cable splice locations are not labeled on the plans the ITS Field Operations Manager shall designate where splices will be allowed. The CONTRACTOR shall order cable in reel lengths that are of sufficient length (>15,000') to require no intermediate splicing of the cable.
- d. The CONTRACTOR shall furnish and install single-mode fiber optic cable as the transmission medium for the video signals, the data communications trunk, and the data communication channels between the field devices and the hub building. The CONTRACTOR shall furnish, install, splice and test all the fiber optic cables. No separate payment shall be made for furnishing and installing splicing kits, fiber optic cable caps, breakaway swivels, moisture sealants, terminators, splice trays, fiber connector panels, jumper cables, connectors, and accessories to complete the fiber optic network. These items shall be considered as incidental and their costs shall be included in the cost to furnish and install the fiber optic cable. No separate payment will be made for equipment used by the CONTRACTOR to install, splice and test the fiber optic cable, the cost of which shall be included in the unit price to furnish and install the cable.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The number of fibers in each cable shall range from twelve (12) fibers through four (4) fibers in the drop cable to 144 fibers in the backbone cable. The number of fibers provided in any particular section of cable shall be as indicated in the Plans.

The following specifications provide detailed operational and technical requirements for specific elements of the communication system. The ITS Field Operations Manager shall designate the fiber allocations for all communications and integration into existing system. Elements of the fiber optic system shall include, but not be limited to, the following:

- 1) Single-mode optical fiber cables used for CCTV data transmission from local field equipment cabinets to the hub building. Transceivers shall be furnished and installed by the Department for video transmission and camera control data transmission over the fiber optic links between the field cabinets and hub building.
- 2) Two single-mode fibers will be used between the local cabinets (two fibers in and two fibers out) for communications. The allocations for the fibers to be used will be designated by the ITS Field Operations Manager.
- 3) Single-mode optical fiber cables used for data communication between the field equipment cabinets. The fiber cables will link the field cabinets in a network having a fiber optic backbone as shown in the Plans.
- 4) UPC ST connectors, patch panel modules, connectorized cable assemblies, and jumpers.

11. TRAINING

The Contractor will be required to furnish training for the testing and maintenance of the fiber optic infrastructure installed on this contract. The training will consist of classroom and “hands-on” training. The Training will be ETA and IMSA compliant and will include ETA FOI, IMSA Fiber Optics for Traffic Systems Tech. Levels I and II certification testing and certifications for each SCDOT employee in attendance.

Training will be furnished as part of the Furnish and Install Fiber Optic Cable bid item with no additional cost to the Department.

- a. The classroom training will consist of a minimum 40 hours (or as required to achieve certifications for both ETA FOI and IMSA Level I and II) of classroom instruction for up to ten (10) SCDOT ITS maintenance personnel and will include hands on training, ETA and IMSA Fiber Optic Technician certification testing, certifications and written instruction. The Department reserves the right to allow others to attend training.
- b. The testing and maintenance training will be conducted at the ITS Maintenance Facility in Columbia SC. Training dates and times shall be approved by the ITS Field Operations Manager prior to scheduling. A list of attendees will be given to the contractor by the ITS Field Operations Manager for scheduling and testing purposes. Training shall be scheduled on a date selected by ITS Field Operations Manager during the project (contractor should note that this training may be required at the beginning of the project however must be conducted prior to Substantial completion of ITS infrastructure for this contract.)

CATALOG CUTS ARE REQUIRED

T. FIBER OPTIC COMMUNICATION PLANT - TESTING

Description: The CONTRACTOR shall test the fiber optic cable before and after installation in accordance with the procedures in this project's special provisions. The results of the tests shall be provided to the DEPARTMENT'S project resident construction engineer (RCE). The CONTRACTOR shall test all used or spare/unused fibers.

1. FIBER OPTIC CABLE TEST

- a. Continuity: Prior to the installation of any fiber optic cable, the CONTRACTOR shall test the continuity of each fiber using an optical time domain reflectometer (OTDR). The

test shall be conducted while the fiber is still on the reel and the test results shall be provided to the RCE.

- b. Splice Loss: After the installation of the fiber optic cable, the CONTRACTOR shall test the dB loss for every splice of the fiber optic cable in accordance with procedures established in the OTDR operator's manual. The testing may be done in conjunction with the splicing of the cable. Any splice that has a splice loss >0.05 dB shall be re-spliced.

The CONTRACTOR shall provide hardcopy test results to the ITS Field Operations Manager that identify the location of the splice (camera/DMS #, splice tray #), the fiber (by buffer tube and fiber color), and the splice loss in dB.

- c. Connector/End Splice Testing: The CONTRACTOR shall test each connector/end splice loss bi-directionally using an OTDR, in accordance with procedures established in the OTDR operator's manual. The average mated connector/end splice loss shall be <0.5 dB. Individual mated connector pair/end loss shall be <0.7 dB. Any connector/end splice with a loss greater than 0.7 dB shall be replaced by the CONTRACTOR. Any replacement connectors/ends shall also be tested.
- d. End-to-End Attenuation Testing: The CONTRACTOR shall perform end-to-end testing of each fiber between each place point at 1310 nm, and 1550 nm bi-directionally in accordance with EIA/TIA 526-7.

The CONTRACTOR shall provide hardcopy test results to the ITS Field Operations Manager that identify the two (2) ends of the test site, the fiber tested, the wavelength tested, the reference power output, and the system attenuation in dB.

The contractor shall provide to the Department three hard copies and three electronic copies on CD of the OTDR test results of all fiber optic cable installed on project. Contractor will supply to the Department any software required to open the OTDR electronic files at no additional cost to the Department.

The CONTRACTOR shall provide OTDR signature traces of all fibers between all CCTV locations and ITS control centers for system documentation and restoration purposes.

U. FURNISH AND INSTALL FIBER INTERCONNECT CENTERS AND CLOSURES

1. Description:

This item is to be included in the cost for FURNISH AND INSTALL FIBER OPTIC CABLE. These items shall consist of furnishing and installing fiber interconnect centers and fiber optic interconnect closures. All in-ground (below grade) Splice Enclosures shall be of the 3M brand, no exceptions. Included in these items are the splicing of the fiber optic cable; furnishing and installing splice trays, interconnection sleeves, jumpers, connectors and other hardware that may be needed to house the coiled fiber optic cable and the fiber optic splices. The centers and closures will have a varying number of splice trays and splices and shall be housed at locations such as: at base mounted 332A local cabinet, at field hubs (332A cabinet) and the hub building, and inside service boxes for drop cables to local cabinets or inside service boxes at reel termination points. Closures may be needed when the fiber optic cable is transitioned from a buried location to an aerial crossing at a river or railroad crossing. GPS location shall be provided for mid spans/reel end splices and shown on as-built plans.

2. MATERIALS

The CONTRACTOR shall furnish and install Gator patch cables or Department approved Siecore or CCS01U rack-mounted fiber optic interconnect centers at field cabinets or hubs. The CONTRACTOR shall also provide 3M splice closures at locations for drop cables and reel end splices. The fiber interconnect centers shall include strain-relief hardware, be rack-mountable and typically have the following capacities and locations:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- a. At each of the base mounted local cabinets, there shall be one (1) splice/organizing tray and termination/connection capacity for a minimum of six (6) fibers and shall have ST connectors installed or a Gator patch.
- b. At a field hub cabinet there shall be one or two (1-2) splice/organizing tray and termination/connection capacity for twelve to one hundred forty four (12-144) fibers.
- c. At hub building, there shall be four (4) splice center/organizer trays with a capacity to hold a total of 144 splices each.

The fiber optic 3M brand closures shall typically have the following capacities and locations:

- d. At fiber optic backbone reel end locations with a 144-splice closure capacity.
- e. At drop locations as specified on drawing with a 12-splice closure capacity.

The fiber interconnect center and closures shall be located in the cabinet or service boxes such that the slack fiber optic cable stored on top of the fiber interconnect center (as required in the Special Provision – Furnish and Install Fiber Optic Cable) can be easily removed (along with the fiber interconnect center) from the cabinet and taken to a maintenance vehicle for splicing, if necessary.

The interconnect centers shall be equipped with fiber connector panels with factory-installed interconnection sleeves. The interconnection panels shall be clearly labeled (transmit/receive). The interconnection sleeves shall be type ST compatible, with ceramic insert, and composite housing for single- mode fiber optic cable. The trays shall be a Siecor type or approved equivalent.

The CONTRACTOR shall furnish pigtail fiber optic cable assemblies with type UPC-ST compatible connectors factory-installed on one (1) of the assemblies. The pigtails shall be fusion-spliced to the fiber optic communication cable in each splice tray. The appropriate number of pigtail assemblies shall be furnished and installed in each fiber interconnect center.

3. SPLICING OF THE FIBER OPTIC CABLE

a. Splicing Methods

All splicing shall be done by means of a fusion-splice technique, which induces less than 0.09 dB attenuation. Bare fibers shall be completely recoated with a protective RTV gel or similar substance prior to application of the sleeve or housing to protect the fiber from scoring, dirt, or microbending. Each spliced fiber shall be packaged in a heat shrunk protective sleeve or housing. All splices shall be performed in accordance with the cable manufacturers and the splice manufacturer's recommendations. During splicing, the CONTRACTOR shall maintain the continuity of the buffer tube and fiber color.

Incoming fibers shall be provided with five (5) feet of coiled slack and spliced to a pigtail of the same type fiber. Pigtails shall have a minimum length of five (5) feet and shall have a factory-installed UPC-ST compatible connector. The pigtails shall have an attenuation of less than 0.5 dB. The UPC-ST connector shall mate with the connector panels installed in the fiber interconnect center.

Unused optical fibers shall be properly protected with sealed end caps.

The CONTRACTOR shall record the meter marks on the cable sheath at each splice point. These marks shall be provided to the owner on a sheet of as-built system plans at the completion of the project.

The CONTRACTOR shall label all fiber optic patch panels and jumpers. Labeling shall match DMS and Camera addressing numbers, if fiber port is unassigned, the fiber destination location shall be used for labeling. The labeling shall be approved by the Engineer.

b. Jumpers

If necessary, the CONTRACTOR shall furnish and install single-mode fiber optic cable assemblies with UPC ST connectors factory-installed on each end (jumpers). These assemblies will be used to connect the fiber optic modem to the connector panel. These jumpers will not be paid for directly, but shall be considered incidental to the item Furnish and Install Fiber Optic Modem.

c. Future Applications

The fiber optic communications network is being designed and constructed to accommodate future applications. The CONTRACTOR shall only fusion splice the necessary fibers at local cabinet locations. However, the CONTRACTOR shall splice all fibers at reel end splices. Complete fiber optic cable count shall be terminated at Hub building, TMC facilities and/or other head end location. All pigtail assemblies shall be connected by the CONTRACTOR to the connector panels installed in the fiber interconnect center. The transmit and receive designations of each fiber pair shall be clearly labeled on the front of the connector panel. Each fiber termination/connection shall be tested for attenuation.

CATALOG CUTS ARE REQUIRE

V. FURNISH AND INSTALL PRESTRESSED CONCRETE POLES

Description: The following specification covers design, fabrication and installation of pre-stressed spun concrete poles. Poles shall be designed and constructed so that all wiring and grounding facilities are concealed within the pole. All handholes, wire inlets/outlets, inserts for pole steps, thru-bolt holes and ground wire shall be cast into the pole during the manufacturing process. These specifications are for typical 80-foot and 60-foot concrete poles to be used for installations with Closed Circuit Television (CCTV) assemblies. Pre-stressed concrete poles shall be Stress Crete SCDOT camera poles or approved equal.

1. DESIGN

- a. Poles shall be designed considering the application of both dead load and wind load. The moment at any point along the length of the pole is to be the sum of moments resulting from dead loads and forces from wind loads. The wind force is to be computed by multiplying the specified wind pressure by the effective projected area (EPA) of the individual components.
- b. The P-Delta secondary moments due to the deflected unbalance of the structure must be accounted for in the design and shown in any calculations submitted.
- c. Poles shall be designed to meet AASHTO requirements for wind loading.
- d. Manufacturer shall supply engineering calculations which support pole design, hardware when applicable and foundation design when soil borings are provided. Calculations shall be approved and stamped by a registered professional engineer.
- e. Poles shall be designed such that the deflection does not exceed 1.1% of the free height of the pole at its maximum EPA under a wind loading equivalent to ½ the designated ultimate wind speed, including a 1.3 gust factor.
- f. The natural frequency of the pole shall be limited to 0.8 cycles/sec. The manufacturer shall provide calculations verifying the above requirements.
- g. The structural design shall provide for both multiple point and one point lifting.
- h. Poles shall be designed such that the forces imposed in handling, transportation and erection including a 1.3 impact factor, shall not exceed its cracking moment when handled at the pickup point locations indicated by the manufacturer.

2. MATERIALS

- a. Concrete: The concrete mix shall be designed to achieve a minimum 28-day compressive strength of 8,000 psi. Concrete test reports shall be kept per ASTM C-99 and certified by a registered professional engineer. Cement shall conform to the latest requirements of Type I, II or III Portland Cement in accordance with ASTM- C150.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Maximum size aggregate may be $\frac{3}{4}$ inch or 75% of the clear spacing between main reinforcing steel and surface of pole. Any water/reducers, retarders, or accelerating admixtures shall conform to ASTM-C494. Water shall be free from foreign materials in amounts harmful to concrete and embedded steel.

- b. Pre-stressing Steel: Pre-stressing steel reinforcement shall conform to uncoated 7-wires, stress-relieved strand (including low relaxation) per ASTM-A416 and shall be limited to $\frac{1}{2}$ inch diameter.
- c. Spiral Reinforcement: Steel spiral reinforcement shall conform to the requirements of ASTM-A82 and shall not be less than 0.150 inch diameter. The pitch of the spiral steel shall not be greater than 3.2 inches or the radius of the pole, whichever is less.
- d. Hardware: All structural steel shall conform to ASTM-A36 and be hot-dip galvanized in accordance with ASTM- A123. Zinc alloy AC41A for inserts, hand hole frames and covers, shall conform to ASTM-B240. All bolts, nuts, washers and other fasteners must be either stainless steel or hot-dip galvanized per ASTM-A153.

3. MANUFACTURE

- a. All manufacturing tolerances, details or reinforcement and finishes shall be in accordance with "Guide Specification for Pre-stressed Concrete Poles", as published in the May-June 1982 issue of the Journal of the Pre-stressed Concrete Institute.
- b. Poles shall be pre-stressed concrete poles, manufactured by the centrifugal spinning process.
- c. Poles shall be round in cross-section with hollow center.
- d. Pre-stressing forces shall be limited to 65% of the ultimate yield strength of the pre-stressing strand.
- e. Forms shall be designed to provide a minimum concrete cover of $\frac{3}{4}$ " inch over the spiral steel.
- f. Poles shall have a smooth natural form finish, soft gray color.
- g. The manufacturer shall have a minimum of ten years of experience in the design and production of centrifugally spun concrete poles.
- h. Pole will be of single piece construction through 130 ft., unless otherwise specified.

4. POLE ACCESSORIES

- a. Nameplate: A brass or aluminum nameplate shall be cast into the wall of the pole approximately five (5) feet above the ground line identifying the name of the manufacturer, job identification (SCDOT project number) or order number, overall length, manufacturer date, and actual weight.
- b. Two (2) four (4) inch x ten (10) inch conduit entrance opening shall be centered 18 inches below grade.
- c. An internal wire support shall be located directly above each wire inlet/outlet and be accessible from the handhole opening.
- d. The pole base shall be plugged to provide extra bearing surface.
- e. Grounding - A #4 stranded copper ground wire shall be cast into the pole. The ground wire shall be terminated in a copper/tank ground at the top platform/crossarm level and approximately 12 inches below grade. Ground grid shall be connected to the cabinet ground and electric service ground in the electrical pull box located at the cabinet. The copper tank ground shall provide a $\frac{1}{2}$ inch tapped insert for the grounding of hardware. The tank ground shall be connected to the camera lowering device at the top of the pole with AWG 4 stranded bare copper. This internal grounding system, shall meet NFPA and UL96 requirements.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- f. A minimum size three and one-half (3-1/2) inch x eight (8) inch reinforced hand hole frame with curved cover shall be centered 24 inches above grade for both 80 feet and 60 feet poles. This hand hole shall have the manufacturer recommended attachments installed for the camera lowering device wench to be used on this contract.
- g. A minimum size three and one-half (3-1/2) inch x eight (8) inch reinforced hand hole frame with curved cover shall be centered 48 inches above grade 90 degrees offset from other hand holes for cable access on both 80 feet and 60 feet poles.
- h. A minimum size three and one-half (3-1/2) inch x eight (8) inch reinforced hand hole frame with curved cover shall be centered 52 inches above grade for both 80 feet and 60 feet poles. There shall be an eye bolt installed 90 degrees offset from the hand hole inside of pole. The eyebolt shall be installed to manufactory recommendations to secure the camera-lowering device's lowering cable.
- i. A minimum size three and one-half (3-1/2) inch x eight (8) inch reinforced hand hole frame with curved cover shall be centered 20-23 feet above grade for both 80 foot and 60 foot poles.
- j. A minimum size two (2) inch x eight (8) inch reinforced hand hole frame with curved cover shall be centered 48 - 49 feet above grade for the 60 feet pole only and 67 – 69 feet above grade for 80 pole.

5. INSTALLATION

Prior to installation, the CONTRACTOR shall conduct the necessary soil samples and geotechnical analysis to determine installation depth and foundation design requirements for each pole. The samples should be taken at the locations where the poles are to be installed and a copy of the analysis submitted to the SCDOT project engineer for consensus. The analysis results should provide a recommendation of the back fill material, depth and diameter requirement for the concrete pole. Final pole installation location shall be approved by the ITS Field Operations Manager prior to installation. GPS location shall be provided for camera pole and shown on as-built plans. When pole is to be installed on steep slopes or hills contractor shall furnish and install a level 12'X12' class A concrete pad around pole for access and maintenance purposes, at no additional cost to the department. A service box shall be installed in pad with 2- two (2) inch spare conduits extending out two (2) feet past the edge of pad for future access. The conduit locations shall be marked with an X in the concrete pad.

For bidding and estimating purposes, an embedment depth of ten percent (10%) of the overall pole length plus an additional four (4) feet may be used. Sixty feet CCTV poles shall have a typical 36-inch diameter hole.

- a. Grounding Grid: There shall be a four point grounding grid 7' x 7' around pole which shall be connected to copper/tank ground 12 inches below grade. The grid shall consist of a min. of four RUS 13 ground rods 5/8 inch by eight feet long copper clad, a min. of #4 AWG bare 7 stranded copper wire. Ground grid shall be connected to the cabinet ground and electric service ground in the electrical pull box located at the cabinet. Additional ground rods may be required to achieve proper resistance to ground (not to exceed eight ground rods). Connections to rods shall be by a method of exothermic weld connections. Ground grid shall meg <15 ohms and shall be tested using the fall of potential method and test shall be overseen by Engineer.
- b. Plumbing Pole: Poles shall be plumbed (straight) before back filling, to Engineers approval.
- c. Access Holes: Pole shall be set so that top Access hole in pole is no more than four (4) and one half (½) feet above finished grade and no less than four (4) feet above finished grade.
- d. Back fill Material: Back fill material shall be crush and run in typical installations. No soil samples and geotechnical analysis have been made. Contractor is responsible for all soil

samples and geotechnical analysis. Where deemed necessary by Engineer, Class A Concrete shall be used for back fill material at no additional cost to the Department.

CATALOG CUTS ARE REQUIRED

W. FURNISH AND INSTALL STEEL POLES

Description: The following specification covers design, fabrication and installation of Steel poles. Poles shall be designed and constructed so that all wiring and grounding facilities are concealed within the pole. All hand holes, wire inlets/outlets are fabricated into the pole during the manufacturing process. These specifications are for typical 50-foot steel poles to be used for installations with Closed Circuit Television (CCTV) assemblies. Steel poles shall be Valmont CCTV Camera Poles SC drawing 12768-1 or approved equal.

1. DESIGN

- a. Poles shall be designed considering the application of both dead load and wind load. The moment at any point along the length of the pole is to be the sum of moments resulting from dead loads and forces from wind loads. The wind force is to be computed by multiplying the specified wind pressure by the effective projected area (EPA) of the individual components.
- b. The P-Delta secondary moments due to the deflected unbalance of the structure must be accounted for in the design and shown in any calculations submitted.
- c. Poles shall be designed to meet AASHTO requirements for wind loading.
- d. Manufacturer shall supply engineering calculations which support pole design, hardware when applicable and foundation design when soil borings are provided. Calculations shall be approved and stamped by a registered professional engineer.
- e. Poles shall be designed such that the deflection does not exceed 1.1% of the free height of the pole at its maximum EPA under a wind loading equivalent to ½ the designated ultimate wind speed, including a 1.3 gust factor.
- f. The natural frequency of the pole shall be limited to 0.8 cycles/sec. The manufacturer shall provide calculations verifying the above requirements.

2. Materials

Hardware: All structural steel shall conform to ASTM-A36 and be hot-dip galvanized in accordance with ASTM- A123. Zinc alloy AC41A for inserts, hand hole frames and covers, shall conform to ASTM-B240. All bolts, nuts, washers and other fasteners must be either stainless steel or hot-dip galvanized per ASTM-A153.

3. Manufacture

Pole will be of single piece construction, unless otherwise specified.

4. Pole Accessories

- a. Nameplate: A nameplate shall be installed on the pole approximately three (3) feet above the ground line identifying the name of the manufacturer, job identification (SCDOT project number) or order number, overall length, manufacturer date, and actual weight.
- b. Grounding: A #4 stranded copper ground wire shall be connected to a grounding lug inside of pole. The ground wire shall be terminated a multi-point grounding system (not to exceed eight ground rods) connected to the cabinet ground and electric service ground in the electrical pull box located at the cabinet.
- c. There shall be two hand holes fabricated into pole at measurements as shown on Valmont Drawing 12768-1 or as approved by the Department

5. Installation

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Final pole installation location shall be approved by the ITS Field Operations Manager prior to installation. GPS location shall be provided for camera pole and shown on as-built plans.

- a. Grounding Grid: There shall be a multi point grounding not to exceed 8 ground rods, which shall be connected to the inside of the pole with a mechanical lug. The grounding shall consist of a min. of three RUS 13 ground rods 5/8 inch by eight feet long copper clad, a min. of #4 AWG bare 7 stranded copper wire. Grounding shall be connected to the cabinet ground and electric service ground in the electrical pull box located at the cabinet. Additional ground rods may be required to achieve proper resistance to ground (not to exceed eight ground rods). Connections to rods shall be by a method of exothermic weld connections. Grounding shall meg <15 ohms and shall be tested using the fall of potential method and test shall be overseen by Engineer.
- b. Plumbing Pole: Poles shall be plumbed (straight), shims may be used to plumb per manufacture recommendation and to Engineers approval.
- c. Breakaway T Base: Transformer Base, TB1-17 Modified w/ Pelco Door & Washers, Alum Pelco's TB1-17 Transformer Base stands 17" tall with a 13.12" square top, 15.38" square bottom, and has a 10½"-13½" top bolt circle and 10½"-1215/16" bottom bolt circle. Comes complete with an aluminum Pelco door and 8 heavy duty galvanized steel washers. Install in accordance to the manufacture recommendations.
- d. Anchor Foundation: Foundation Anchor Assy, 8" Sch 20 x 5'-0" 11" to 17" Bolt Circle, 1"-8NC Hardware Pelco's schedule 20 foundation anchors feature a top plate which enables the bolt head to be inserted after the anchor is in place. This eliminates the necessity of digging under the plate to install base bolts. The carriage bolts are locked in place by the slots in the top plate, which prevent them from turning. For street and highway lighting. Typically for poles ranging from 30'-50' in height. (wt. 184 lbs). Install in accordance to the manufacture recommendations. PB-5534-GLV

Foundation Anchor Assy, 10" Sch 20 x 10'-0" 13-1/2" to 17" Bolt Circle, 1"-8NC Hardware Pelco's foundation anchors feature a top plate which enables the bolt head to be inserted after the anchor is in place. This eliminates the necessity of digging under the plate to install base bolts. The carriage bolts are locked in place by the slots in the top plate, which prevent them from turning. For street and highway lighting. Typically for poles ranging from 30'-50' in height. (wt. 359 lbs) Install in accordance to the manufacture recommendations. PB-5535-GLV

CATALOG CUTS ARE REQUIRED

X. FURNISH AND INSTALL CAMERA LOWERING DEVICE

Description: The camera lowering device shall be designed to support and lower a standard closed circuit television camera, lens, housing, dome, PTZ mechanism, cabling, connectors and other supporting field components without damage or causing degradation of camera operations. All components of the lowering device shall be installed so that they function properly with other ITS components. The device shall be used in conjunction with concrete or steel support poles. Camera lowering device shall be a Camera Lowering Systems (CLS) CDP6-16HDBP series or approved equal. Lowering device to be offset a minimum of 90 degrees off access holes. Lowering devices should typically be ordered with 105 feet of lead cable and 18 inch pigtail on lowering head. All lowering devices and lowering winches shall be designed for eighty (80) feet camera poles. When deemed necessary by the Department the Contractor shall furnish longer lead cables as needed per project.

1. Materials

- a. Top Plate or Arm Mounted Assembly

The headframe assembly shall be designed to bolt to a round cross section on top of pole structure.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

The interface and locking components shall be made of stainless steel and or aluminum. All external components of the lowering device shall be made of corrosion resistant materials, powder coated, galvanized, or otherwise protected from the environment by industry-accepted coatings to withstand exposure to a corrosive environment.

The lowering device shall be a "single cable" system, with the control cable remaining stationary in the pole during the lowering process. Camera lowering tool is a LT-1R-11-XX or approved equal.

The only cable permitted to move within the pole or lowering device during lowering or raising shall be the stainless steel lowering cable. All other cables must remain stable and secure during lowering and raising operations.

b. Camera Mounting Assembly

The camera mounting assembly shall be a two piece design for easy camera mounting.

- 1) Both sections shall be made of corrosion resistant cast aluminum.
- 2) The top half shall be mounted and gasketed to the bottom of the disconnect unit. It shall extend into the cylinder of the disconnect unit and designed to repel water.
- 3) Inside the top half, it shall have provision to mount additional weights for lightweight cameras or other equipment.
- 4) All parts shall be made of extra heavy construction.
- 5) The camera connection box shall be adaptable to all brands of cameras by means of a one and one half inch NPT receptacle.
- 6) The two piece construction shall feature a lower box that hinges down for easy access to wiring. It shall contain a large capacity-splicing compartment for camera power, signal leads, surge suppression equipment, and connectors. The internal cavity shall be a minimum 8.5 inches square X a minimum 4.5 inches deep (per half) with a 1.5 inch NPT female pipe thread centered in the bottom.
- 7) All hardware shall be made of stainless steel.

The hoist cable shall be stainless steel wound anti-rotational aircraft cord minimum of 1/8 inch diameter manufactured to meet MIL-W83420C.

c. Electrical Connection

- 1) The coaxial and electrical disconnect unit shall meet or exceed sine vibration tests of 3.5 g's within the frequency range of 5-60 Hz in all three axes for minimum of six 5-minute cycle each axes. It shall meet or exceed random vibration tests of frequency range 60-1000 Hz at .025 g²/Hz applied for 30 minutes in each of the three axes. It shall have results to exhibit no signal or electrical discontinuities greater than 10 microseconds. Tests applicable to Electrical Disconnect Unit and attached component.
- 2) The EDU shall have a 3-way tracking guide and support. It shall be constructed of precision cast high strength aluminum alloy 356-T6. A permanently fixed position piece incorporating a special tracking guide system permits the moveable portion of the Disconnect Unit to align in the same position every time the system is operated, thereby eliminating the need to re-orientate the camera. The Electrical Disconnect Unit shall have twin high strength notches securing the load of the Lower Contact Assembly and camera.
- 3) The MULTI-CONTACT Connector assembly shall be modular for easy installation and retrofit requirements. All pin and socket contacts shall be insertable and removable. The connector shall have a maximum of 16 copper alloy C14500, size 12 contacts (.095" Dia.) rated at 35 Amps with gold plating per MIL-G-45204. All hardware shall be corrosion resistant stainless steel. It shall have a self-aligning and self-adjusting mechanical system comprised of two principal assemblies:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Two UPPER CONTACT HALVES shall house the socket contacts. It shall incorporate spring assisted polymer contact body with precision-machined guideposts. The socket contact body shall have integral guideposts for precise contact alignment. The composite cable shall be terminated directly into the upper contact halves and shall run splice free to the CCTV cabinet. Composite cable shall be Camera Lowering Systems 663-229-RG59-09 16HD-CQ or approved equal.

Two LOWER CONTACT HALVES shall house the pin contacts comprised of spring assisted polymer contact body with precision-machined guidepost receivers. The pin contact body aligns with guideposts of integral socket bodyguideposts.

- 4) The EDU cover shall be a one-piece hydro-spun heavy gauge stainless steel. The unit shall have a guidepost constructed of precision cast high strength stainless steel. It shall utilize a cast-in- place guide bar for precise alignment of Lower Contact Assembly with the fixed portion of the EDU.
- 5) The cables shall meet the following minimum requirements:
 - a) Camera Control Cable – Shall be a Camera Lowering System 663-229-RG59-09 16 HD-CQ or approved equal. All camera control cables shall incorporate a cat-5 or cat-6 cable for IP camera connections along with all other conductors for analog cameras in one single jacketed cable. The cable shall be splice free. All connectors shall be equipped with a strain-relief.
 - b) Video Cable - The video cable between the camera unit and the video transmitter shall be made with RG-59U coaxial cable. All cable runs shall be continuous and un-spliced. Connectors shall be BNC or MS. All connectors shall be equipped with a strain-relief.

2. CONSTRUCTION METHOD

The lowering device shall not be installed on pole prior to delivery to installation location. After poles delivered to the location where it is to be erected, the lowering device shall be installed. The clam shell or junction box shall not be mounted prior to pole being set. The Clam shell or junction box shall be mounted after the pole is erected by means of lowering the device and then installing. Care shall be taken while the pole is being erected to insure lifting cables do not rest against or damage lowering device. It is the contractor's responsibility to insure the lowering device is level and straight after erection of pole, to the satisfaction of the Department.

3. SPARE PARTS

As part of the contract bid for **FURNISH AND INSTALL CAMERA LOWERING DEVICE**, at the time of final acceptance of the project, the Contractor shall furnish to the SCDOT the following for use as spare parts.

These parts will be new:

- a. Five (5) spare Camera Lowering Systems (CLS) CDP6-16HDBP series per spec
- b. Two (2) spare LT-CC-90 Lowering tool with SS aircraft cable each including Dewalt 20 volt ½" hammer drills (DCD985L2)

CATALOG CUTS ARE REQUIRED

Y. INSTALL 332 AND SCIPCAB1 ITS CABINET ASSEMBLY

DESCRIPTION – This work shall consist of installing a Department supplied Type 170 332 cabinet assembly or SCIPCAB1 cabinet assembly used to house the transceivers and splice tray equipment or gator patch to transmit the signals and connect to the fiber optic cable back to the hub building or TMC.

Where references are made to Caltrans specifications, the CONTRACTOR is directed to the Traffic Signal Control Equipment Specifications, as published by the State of California Business,

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Transportation & Housing Agency: Department of Transportation, Current Edition, and all current addenda. The ITS cabinet assembly, as described below, shall conform to all applicable sections of the Caltrans specifications, South Carolina DOT Standard Specifications and to the supplemental requirements of this section.

1. General Requirements

The CONTRACTOR shall install the ITS cabinet assemblies as called for in the Plans and shall conform to all materials and installation requirements of this section.

2. Materials

a. Standard Cabinet Housing

1) General Requirements

Unless otherwise specified, all cabinet housings shall conform to the cabinet housing details as defined in Chapter 6, Section 2 (Housing Number 2) and the cabinet housing details of the Caltrans specification. All cabinets shall exhibit a smooth, uniform natural aluminum finish. The police panel and associated wiring circuits are not required as part of this cabinet assembly. All cabinets shall have hooks, welded to the inside of the front cabinet door, for hanging the plastic documentation pouch.

All bolts, nuts, washers, screws, hinges, hinge pins and other related hardware shall be stainless steel.

Unless otherwise specified in the Plans, all 332 equipment cabinet assemblies shall be configured for base-mounting. The cabinet bottom shall be open and set on prefabricated concrete base. Prefabricated concrete bases shall be set on a 12 inch bed of crush and run leveled and compacted. Cabinet must be level and plumb. All SCIPCAB1 equipment cabinet assemblies shall be configured for mounted on a prefabricated concrete pedestal. Prefabricated concrete pedestals shall be set 3 feet in the ground and back filled with ready mix concrete, a minimum of 5 feet above grade.

2) Standard Cabinet Housing

The cabinet housing (see Detail Drawing 1) shall be a standard Model 332 housing with approximate exterior dimensions of 66 inches (H) by 24 inches (W) by 23 inches (D).

All cabinet housings shall be equipped with the standard EIA 19-inch rack cabinet cage as described in Section 3 of the Caltrans specification. Side panels within the two sides of the cabinet cage shall be installed as. Each side panel shall be fabricated from 5052 sheet aluminum alloy with a minimum thickness of 0.125 inches.

SCIPCAB1 cabinet housing with approximate exterior dimensions of 16 inches (H) by 14 inches (W) by 12 inches (D).

The 332 cabinet housing shall be equipped with a rack-mounted fiber interconnection panel or Gator patch and appropriate fiber jumper cables between the interconnection panel and the fiber optic transceivers. The fiber interconnection panel shall be no more than one rack unit high (1.75 inches) and no more than 12 inches deep (Multilink FRM012X, Siecor C-MIC-012 or CCSO1U or approved equivalent). The panel shall be fabricated from aluminum or painted steel and shall include an easily accessible enclosed compartment with fiber routing guides, cable strain-relief guide and grounding lug. Cable entry holes closed with rubber or soft plastic poke-through grommets shall permit cable entry from the rear, sides or bottom of the enclosed compartment. The panel shall be capable of terminating a minimum of 144 fibers. A minimum of two (2) single-mode ST connectors shall be provided to terminate the fibers in the fiber drop cable as shown in the Plans. The ST connectors furnished with the fiber interconnection panel shall be fully compatible with the ST connectors terminated onto the fiber drop cable and the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

fiber jumper cable. All ST connectors in the fiber interconnection panel shall be identified in the cabinet documentation by type (UPC, single-mode, ceramic, composite, etc.).

The 332 cabinet housings shall be equipped with a cabinet sliding drawer. The drawer shall be an aluminum storage compartment mounted in the rack assembly with the approximate following dimensions: 1.75 inches (H) x 16 inches (W) x 14 inches (D). This compartment shall have telescoping drawer guides to allow full extension from the rack assembly. When extended, the storage compartment shall open to provide storage space for cabinet documentation and other miscellaneous items. The storage compartment shall be of adequate construction to support a weight of 25 lb. when extended. The top of the storage compartment shall have a non-slip plastic laminate attached, which covers a minimum of 90% of the surface area of the top.

b. Internal Cabinet Assembly Components and Wiring

1) Surge Suppression

The cabinet shall have a Department supplied model 4000 Hawk modular power unit or Approved equal.

3. INSTALATION

All 332 or SCIPCAB1 cabinet assemblies which includes the concrete base or pedestal shall be installed where shown on the Plans and shall be plumb and level. The cabinet assembly shall be provided with a grounding system in accordance with the DEPARTMENT'S Standard Specification. The CONTRACTOR shall measure the resistance to ground in the presence of the ENGINEER and it shall be <15 ohms. The ground conductor between the cabinet grounding terminal and the ground rod shall not be spliced. The cabinet assembly grounding system shall be connected to the camera pole ground grid and the electric power service ground in the 17X30X28 pull box placed within five feet of cabinet to form a complete grounding system. Cabinets shall be installed approximately five feet from the CCTV pole, insuring that the cabinet will not interfere with the lowering tool. The Cabinet shall be placed so that the equipment side is facing away from the pole or DMS sign location. The ITS Field Operations Manager shall designate the cabinet location in the event the cabinet has to be set further than five feet from the CCTV pole. The DMS sign cabinets shall be Ledstar ACAS74A01R10 or approved equal located on upright of structure or as shown on plans. All cabling and wiring entering the cabinet housing shall be enclosed in conduit. A spare 2" conduit shall be installed for future use. All cabling and wiring inside the cabinet, including field wiring, shall be secured and neatly dressed and shall have sufficient slack [minimum two (2) feet] for cabinet equipment maintenance and re-termination of the field wiring. Fiber drop cables into the cabinet shall be routed to provide as much physical protection as possible, shall be secured through the cabinet, and shall be strain-relieved within the fiber termination unit.

Electrical power cable, grounding bushing or utilize myers hub, control cabling and fiber optic cabling shall enter the SCIPCAB1 cabinet housing in a continuous run of 2" aluminum conduit or rigid galvanized steel to extend from bottom of SCIPCAB1 cabinet to a minimum of one (1') foot below grade. When disconnect and or power meter is located on the same pedestal, the electrical power cabling shall enter the bottom of the SCIPCAB1 cabinet housing in a 1" metallic sealtight flex. SCIPCAB1 cabinet assembly shall be banded to the pedestal using stainless steel banding in two locations or with factory mounting hardware. Whenever possible the SCIPCAB1 cabinet assembly shall be mounted on the opposite side of the pedestal from the disconnect or meter can.

4. Certification

Prior to installation, the CONTRACTOR shall submit to the ENGINEER design details and drawings in complete evaluation of the materials, and comparison with these specifications. Any exception to these specifications must be stated in writing at that time.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

5. Guarantee

- a. The CONTRACTOR shall furnish the ENGINEER with any warranties or guarantees on all electrical or mechanical equipment that are provided by the manufacturer or vendor, as customary trade practice.

-and/or-

- b. The CONTRACTOR shall warranty or guarantee the satisfactory in-service operation of all electrical or mechanical equipment and related components, for a period of six (6) months following project final acceptance.

CATALOG CUTS ARE REQUIRED

Z. FURNISH AND INSTALL ELECTRIC FLUSH UNDERGROUND ENCLOSURE

DESCRIPTION – This work shall consist of furnishing and installing ELECTRIC FLUSH UNDERGROUND ENCLOSURE (service boxes) at the locations determined by the Contractor and SCDOT and in accordance with these Specifications. The service box shall consist of a box and cover, installed over a min. 6 inches of aggregate. The service box is intended for use for the power supply for the cameras and detection devices and is intended for use of coil of fiber optic cable and future splice of the fiber optic cable near bridge decks. The contractor is cautioned that some boxes may be installed over existing conduit with existing cable. The contractor is responsible for installation without damage to the existing items. Any damage shall be repaired by the contractor at no cost to the Department. Any damage to the existing fiber optic cable shall be repaired within twelve (12) hours of damage. A penalty of \$100.00 per hour shall be imposed for every hour past twelve that it takes to repair existing fiber cable. Service boxes shall be Armorcast A6001430TAPCX30 or High Line HIGHLINEPHA30483H04 furnished with a two- piece non-skid cover or approved equal. All Electrical pull boxes shall be an Armorcast A6001640TAPCX28 or approved equal. It shall be installed on in the dirt, at the depth so as the top is flush with the ground. GPS location shall be provided for all boxes and shown on as-built plans.

1. Materials

Shall meet the following requirements:

a. Box and Cover

The service boxes shall consist of a base having an open top (the box), with a separate removable two piece cover. . They shall be GRAY IN COLOR. Two piece covers shall have the LEGEND "SCDOT Fiber optic" or "SCDOT Electrical", as required. In the case were both fiber optics and electrical cable will pass thru the same box the LEGEND shall have "SCDOT FIBER/ELEC". They shall use HEX-HEAD stainless steel bolts. The PHYSICAL FEATURES AND THE NOMINAL SIZE AND DIMENSIONS for the box and cover, are shown on the Standards or the Design Details, and are listed below:

	WIDTH	LENGTH	DEPTH
SERVICE BOX:	30in.	48in.	30in.
Pull Box:	17in.	30in.	28in.

(Service, Splice box for fiber optics and for electric services when deemed necessary by the engineer)

b. Design Load

Boxes shall be designed to survive a tandem wheel load specified by AASHTO H 20-44, being 32,000 pounds (14,514.9 kg) per axle, or 16,000 pounds (7257.6 kg) per tandem wheel pair. This 16,000 pound (7257.6 kg) dead load shall be multiplied by 1.3 impact factor, to obtain the DESIGN TEST LOAD OF 20,800 pounds (9434.7 kg). Thus, boxes shall be designed and tested for the following test loads: Cover-vertical load 20,800 pounds distributed over a 10 in. x 20 in. area (9434.7 kg over .254 x .508 m). Box- vertical load 20,800 pounds distributed over a 5 in. x 20 in. area (9434.7 kg over .127 x .508 m).

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Box-lateral load of 600 pounds per square foot (28728 Pascals). The cover deflection shall be less than 0.5 inch (1.27 cm); and the box deflection less than 0.25 in./ft. of length (.635 cm/.3 m). (Because of quoted references, English units are first.)

c. Western Underground Committee (WUC)

Using the above specified loads, the service boxes shall meet or exceed the WUC "Recommended Guide No. 3.6, Non-Concrete Enclosures". Structural requirements shall include: testing for vertical load on cover; vertical load on box; lateral load on box. Further they shall meet WUC recommendations for: accelerated service per ASTM D-756; chemical resistance per ASTM D-543; simulated sunlight resistance per ASTM G-53; plus water absorption; and flammability. Covers shall be skid-resistant, with a minimum coefficient of friction of 0.5.

d. Concrete

Concrete for patching shall be DHPT Class A, mixed and installed in accordance with Section 700 of the STANDARD Specifications.

e. Aggregate

Crushed stone for the service box shall be DHPT Aggregate Numbers 5 or 57. Service boxes shall be set on a min.36" X 54" bed of aggregate min. 6 inches deep.

2. Certification

- a. The Bidder shall provide certification from the manufacturer or vendor that the above material specifications have been met, including written results for Western Underground Committee tests.

NOTE: CATALOG CUTS ARE REQUIRED.

- b. The CONTRACTOR shall provide the DEPARTMENT with all guarantees offered by the manufacturer.

3. Construction Methods

a. Construction

- 1) The service boxes shall be constructed as indicated in the Design Details or the Standards, at locations shown on the Plans.
- 2) The service boxes shall be constructed such that when the box and covers are in place, they are flush with the adjacent pavement, ground, or sidewalk, as shown in the Design Details or the Standards. Patching concrete shall be placed around any box installed in pavement.
- 3) Boxes shall be placed at least 0.3 meters (one ft.) behind the curb-line or edge of roadway or as shown on the Plans.

b. Conduit

- 1) See FURNISH AND INSTALL CONDUIT Specifications.
- 2) Conduit shall enter the box at the bottom and extend at least six inches above the aggregate.
- 3) Conduit shall enter from the direction of the run unless otherwise permitted by the ENGINEER.
- 4) All metallic conduit ends within the box shall have grounding bushings with plastic inserts; and shall be bonded with one another with #6 AWG bare copper ground wire. PVC conduits greater than 3" shall have end bushings to prevent chaffing.
- 5) After the electrical/communication cable is placed, the completed conduit ends shall be packed with "duct-seal" or other equivalent material to prevent water from entering the conduit. Spare conduit shall be capped.

c. Grounding

- 1) Service box shall have one 5/8" X 8' copper clad ground rod installed for grounding of detectible multtape or tracer wire for fiber optic cable. The Detectable multtape conductors shall be bonded to the ground rod with a mechanical ground rod connector. Ground rod shall be installed so that the top of the ground rod is 6 to 8 inches below the box lid (allowing easy access for locating personnel to connect inductance equipment to tracer wire). There shall be a min. three feet of slack on detectible multtape.
- 2) All service boxes shall have accurate GPS coordinates with accuracy of 3 feet or less marked on as-built plans. GPS coordinates shall be obtained using a Department approved device. All service boxes shall have a red or orange passive marker ball with a frequency of either 101.4KHZ for fiber or 169.8KHZ for electrical that is compatible with a MetroMark passive marker locator 760Dx or approved equal. All service boxes shall have a 16" RED or ORANGE Top (as required) above ground cable marker type PNA Dome Pack cable post marker 3" dia., 6' long or approved equal.

CATALOG CUTS ARE REQUIRED

AA.FURNISH AND INSTALL PERMANENT DYNAMIC MESSAGE SIGN

Description - The following provides a description of a dynamic message sign using amber LED display elements and various subassemblies, with the intent of providing interchangeability between signs and compatibility with software used. This section describes the minimum requirements for the sign. All items furnished shall be new and shall be the latest version.

It is understood and agreed by the Contractor that equipment shall be complete and shall include all items necessary for the proper functioning of the DMS System. All DMS local controllers shall be Ethernet connectible without any additional upgrades or expense to the Department. Even though every item necessary may not be specifically mentioned or described, the Contractor is responsible for constructing a complete and functioning sign system. Any additional items that are required to make the sign system perform properly but which are not mentioned herein shall be supplied and furnished by the Contractor at no additional charge. Structures for the DMS should be included with the DMS for bidding and payment. Fiber optic cable and Equipment from sign to Controller shall be single mode or multimode fiber and equipment. Fiber terminations and splicing shall be in accordance to the Furnish and Install Fiber Interconnect Centers and Closures Section 1 and 2. Fiber optic cable shall meet the specifications for Furnish and Install Fiber optic Drop cable. DMS signs shall be LedStar VMS-68R6-3X21 Full Matrix Capable and Daktronics or approved equal. If structure is to span a cross both directions of roadway, the structure shall be designed for a load rating sufficient for installing one sign in each direction. Catwalks for bridge structures, cantilever, and any other shall extend from sign to vertical up right.

1. General

The sign display shall only consist of LED illumination technology.

Remote RS232 port shall be provided in the DMS housing to access the local port of the DMS controller.

Displays shall be three (3) lines of 18" characters, 21 characters per line.

Displays shall be readable from a distance of 900 feet.

Sign display and all components will be housed in a waterproof walk-in enclosure.

a. LIGHT EMITTING DIODES (LED)

LEDs shall be untinted, non-diffused, high-output, solid state lamps utilizing indium aluminum gallium phosphide (ALLnGAP) LED technology, manufactured by Avago or equal.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

LEDs shall emit a true amber color at a wavelength of 592 nm (± 4 nm).

LED size shall be T-1 $\frac{3}{4}$ (5mm).

LEDs shall be nominally rated for 100,000 hours of operation under field conditions, which shall include operating temperatures between -22° and +185°F.

LEDs shall have a 15° - 17° viewing angle and shall all be of the same degree viewing angle and manufacturer for all signs.

LEDs shall have no less than 50% of the normalized intensity at their 15° viewing angles.

LEDs shall be soldered to circuit boards with through-hole type circuit board mounting.

Surface mounting of LEDs will not be allowed.

b. PIXELS

Each light-emitting pixel of an LED display shall consist of a cluster of closely spaced LEDs.

Pixels shall be constructed with strings of LEDs. The number of LEDs in each string shall be determined by the manufacturer, as necessary to produce the candela requirement as stated herein.

LED pixels shall produce the luminous intensity levels required herein at a drive current of 20 mA per string with a forward voltage drop not to exceed 24 VDC. The LED drive current shall be adjustable up to, but not exceed, 30 mA per string.

Each pixel shall produce a luminous intensity of 40Cd when driven with a LED drive current of 20 mA per string.

LED pixels shall be driven with direct-drive pulse width modulation. Maximum pulse amplitude shall not exceed 30 mA.

Materials used in the fabrication of LED clusters shall contain UV light inhibitors and shall be designed for direct exposure to sunlight.

Each LED pixel shall be rated for outdoor use over the environmental range expected for the sign locations (including heat absorption due to sunlight).

LED pixels shall be attached to the display panel with a secure fastening system.

LED pixels shall be mounted perpendicular to the display panel.

Visors shall be installed above each pixel or row of pixels for maximum contrast and legibility without interference to the LED display. Alternate methods may be utilized upon approval of the Engineer. The Contractor shall submit complete descriptive literature to the Engineer to substantiate an alternate method.

LED pixels shall be replaceable either individually or in groupings. Groupings with three (3) or more pixels shall be permitted only if bench level repairs and replacements to individual pixels are possible.

Pixels shall be replaceable from the inside of the walk-in display. Clusters and modules shall be interchangeable between signs employing the same display technology.

Characters formed by the DMS displays shall have a minimum of seven (7) pixels in height. The number of pixels making up the character width shall vary by the operator. The horizontal spacing between pixels shall be equal to the vertical spacing between pixels. From the center of the last column of pixels in one module to the center of the first column of pixels in the adjacent module shall equal the spacing between pixels in the same modules.

Character display shall be all upper case letters, all punctuation marks, all numerals 0 to 9, and special user characters such as #, &, *, +, <, >.

c. MODULES

All modules shall consist of pixels arranged by forming a column of seven (7) pixels high by five (5) rows wide. The vertical and horizontal spacing from center of pixel to center of pixel shall be equal. The spacing shall be such that seven (7) pixels high shall form 18" characters. Modules shall be interchangeable among all signs in this project. Modules shall be easily removable for service/replacement with simple hand tools from inside the walk-in enclosure.

d. TEMPERATURE SENSOR

Adjustable temperature sensors to monitor the interior temperature of the DMS enclosure are required. Sensor parameters shall be adjustable by commands from the central, local, or laptop computers to activate/deactivate the fans and heaters. Sensor operating range shall be from +40°F to +150° F. When the temperature in the enclosure reaches +140 degrees F, the local controller will be prompted and when the temperature goes back down to +100 degrees F, the local controller will be prompted again.

e. DRIVER BOARDS

LED driver boards shall be in the DMS housings for all signs. Plug-in locking connectors shall be provided on each driver board for all connections. Connectors shall be held in place with screws. Driver boards shall be easily removable for service/replacement with simple hand tools. Driver boards shall control a single 5X7 LED module. Driver boards and all electronic circuit boards installed in the DMS housing shall be thoroughly coated with an acrylic coating for moisture-resistance. **Each driver board shall have an on-board microprocessor capable on internal diagnostics, LED current measurement and adjustment.**

f. Photo-Electric Sensors

Three (3) commercially available, watertight and dust-proof photoelectric sensors shall be mounted on the enclosure or structure in a position where a technician can easily access them for repair or maintenance. The sensors shall be automatically adjustable by the software for the DMS System or manually set, to a minimum of seven (7) levels. The sensor will be positioned so that front, rear and ambient lighting levels can be detected.

g. Power Supplies

Power supplies shall operate from 120 VAC power. The LED displays shall be operated at low internal DC voltage not exceeding 24 VDC. Power supplies shall be solid state transformer type regulated output. Electronic switching type power supplies will not be allowed. Signs shall be powered with one supply for each 1/3 of the display. Power supplies shall be wired in a redundant configuration such that failure of any supply shall result in a backup supply providing power. The backup power supply shall be rated such that it can operate the entire LED section under full load conditions. Power supplies shall operate from -22o to +185o F. Power supplies shall be short circuit protected by DC power off. Power supplies shall also be protected by a minimum overload allowance of 105% and have an efficiency rating of at least 75%.

h. Sign Face Coverings

Signs shall have polycarbonate sign face coverings. Coverings shall be weather tight, ultraviolet protected, non-diffusing, polycarbonate, with anti-reflective coating and a minimum ¼ inch thick. Sign face shall be designed to minimize bowing. Sign face cover panels shall be installed and removed using simple hand tools.

i. Walk-In Housing

Sign housing, framing, and mounting members shall be designed to withstand a wind velocity in accordance with *AASHTO's Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, latest edition* and PE certified. The DMS should be constructed with a metal walk-in enclosure excluding the face and the enclosure of welded aluminum type 6061-T6, 5052-H38, 5052-H38, 5052-H34 or of an Engineer approved alternate at least 1/8" thick. The seams should be continuously

welded using an inert gas process and all welds should be ensured to be solid with no cracks or blowholes. The housing should be constructed with a maintenance-free clear aluminum finish, with the exception of the front of the housing, which will be painted matte black. A complete description of the painting process, along with a sample of the finish on a 12" x 12" sheet of the same type of aluminum that is used to construct the DMS enclosure, should be submitted to the Engineer for approval. The enclosure should be designed and constructed to resist torsion twist and warp, present a clean and neat appearance, and protect the equipment within from moisture, dust and corrosion. The interior surfaces of the enclosure should be painted with a dull black enamel to reduce internal reflection.

Lifting eyes or the equivalent shall be provided for moving and mounting signs. DMS housings shall be designed such that the DMS can be shipped and temporarily stored, without damage or undue stress, prior to installation on the overhead support structure. The DMS shall be shipped with a temporary wood support frame that will permit the storage of the DMS in a vertical position without damage to the sign housing. The DMS shall be furnished with all required hardware for attachment on overhead sign structures. The attachment devices will be of a type where the sign face can be adjusted +/- 3 degrees vertically and horizontally once installed. The Contractor can propose an alternate method of sign face tilt to be approved by the Engineer.

The requisite dimensions will determine the height and length of the sign enclosure. The sign will consist of three (3) lines of copy, with 21 18-inch high characters per line and a minimum of one-half the letter height distance between lines. The border will be a minimum of 12 inches on all sides of the active display area.

The minimum height of the interior, from the top of the walkway to the lowest framing member or other obstruction shall be 72 inches. The minimum distance from the interior rear wall of the DMS housing to the closest display component shall be 36 inches. This free space shall be maintained across the entire interior of the sign housing. Structural members shall be designed and positioned so as to not be an obstruction to free movement by maintenance technicians throughout the 72-inch height of the housing interior. A level walkway shall be installed in the bottom of the DMS housing for maintenance personnel to walk. This walkway shall be a minimum of 24" wide and shall run the entire length of the sign. The walkway's top surface shall be non-slip and free of obstructions that would present a tripping hazard to maintenance personnel.

All DMS equipment, components, modular assemblies, and other materials located in the DMS housing shall be removable, transportable, and capable of being installed by a single technician. Structural members and components thereof are not included in this requirement. The DMS housing shall be constructed so that all maintenance and repair is performed from within the DMS housing, except for the sign face, necessary external repairs, and any miscellaneous devices required to be installed on the outside of the housing.

Housings shall have interior, non-corrosive, metal cage support frames to mount the display clusters. The cage support frames shall be designed to withstand and minimize vibration effects to the display and/or electronics.

Doors shall be installed on one or both sides of the housing and shall open to the outside and to the rear of the DMS housing. DMS housing doors shall be watertight/dust-proof doors with minimum doorway opening dimensions of six (6) feet high by two (2) feet wide. Doors shall be provided with continuous stainless steel hinges. A four (4) inch kick plate shall be provided at the base of both DMS door openings above the internal walkway. DMS housing doors shall have a stop to retain the door open at the full position. The DMS housing door shall be furnished with a door lock that is keyed. All locks shall be keyed alike, and the Contractor will furnish the Engineer with five (5) keys per DMS. The latching/locking mechanism shall include a handle on the interior of the housing so that a person with no key or tools could not become trapped inside the housing. A metal pocket will be provided on the inside of the door of sufficient size to hold documents

relating to the sign, such as wiring diagrams, instructions and specifications. One of the door openings will require removable rails on the inside of the housing. Rails shall be installed horizontally and spaced vertically every 12 inches to a height of 48 inches above the internal walkway. When installed the side rails will not interfere with the operation of interior handle on the door. The rail size shall be as required to conform to OSHA and all other applicable regulations. Rails shall be attached to the sign housing with stainless steel hardware and designed for removal with simple hand tools. The Department will advise the Contractor prior to installation on which end the rails will be required.

Fans or other forced air devices of sufficient size to circulate air through the interior of the enclosure for maintenance personnel shall be provided. Fans shall be provided to maintain operating temperature for all equipment in the sign. A minimum of two exhaust fans shall be provided to ventilate the enclosure. A separate set of fans shall be used to provide airflow over the LED's and the entire sign face. The Contractor shall provide copies of applicable regulations dealing with personnel ventilation systems and proof of compliance with each requirement. An adjustable timer that will deactivate fans after the set time has expired shall control the maintenance personnel ventilation system. The timer shall be adjustable up to at least four (4) hours and shall be located just inside the DMS housing door, within easy reach for a maintenance technician, and without having to enter the DMS housing.

The DMS housing shall include 15 AMP, 120 VAC duplex electrical outlets, with ground fault circuit interrupters, for use by maintenance personnel. A minimum of two (2) duplex outlets, one at each end of the enclosure, shall be located within the DMS enclosure. Additional duplex electrical outlets may be required so that there is a maximum of 12-feet between outlets.

The walk-in housing shall contain enough internal fluorescent lighting to provide maintenance personnel with a minimum of 240 watts of evenly distributed lighting. Ballast shall be rated for operation in zero degree temperatures. There shall be a protected cover over the lamps. Two (2) three-way switches shall control the interior lighting system and shall be located just inside the DMS enclosure, at both ends, within easy reach from outside the enclosure through each door opening.

Signs shall contain a minimum of three (3) thermostatically controlled fans and electric heating elements (if required by manufacture) to prevent condensation on the inside of the display windows. Electric heating elements are needed if required by the manufacture to prevent condensation. Adjustable thermostat on/off parameters for the control of the fans and electric heaters for the display window shall be adjustable from the local or central computers. Fans shall be designed to provide the cubic feet per minute (CFM) required to properly remove condensation on the inside of the display window. Cooling fans shall be located behind the display modules and shall blow air directly on the back of the LED pixels. Fans shall be designed to properly cool the enclosure and display modules. Heaters shall operate from a 240-volt, 60 Hz, single-phase AC power. Fans shall operate from 120-volt, 60-Hz, single-phase AC power. Vents for fan intake and exhaust shall be weatherproof in design. Filters shall be sized so that standard "off-the-shelf" filters will fit. Filters shall be installed and removed from inside the walk-in enclosure.

j. Local Controller

Each sign installation shall include an associated controller installed in a ground-mounted cabinet on a concrete base at the location shown on the plans. The local controller shall be operated by the Departments existing integrated software package (PALguide). The successful contractor must include integration of the signs with the above mentioned integrated software package (PALguide) The controller shall be orientated so that a technician working at the controller can easily see the message displayed on the DMS. DMS sign cabinet shall be installed as shown on plans or on upright of structure, face cabinet as directed by ITS Field Operations Manager. The DMS local controller will include all necessary cabling, conduit, terminal blocks to connect the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

DMS to the local controller, and devices required for Ethernet network connection and dial-up phone connections to a central controller. Each DMS local controller will have its own unique address for communications. The contractor supplied controller cabinet assembly shall be a LedStar Model CAS36A03R11 or ACAS74A01R10 or approved equal. The 332 or 336 cabinets shall meet the Furnish and Install 332 Cabinet Specifications for this project. The controller cabinet will include (but not be limited to) the following:

- Power supply and distribution with back panel.
- Power line surge protection devices, UPS system and local disconnect.
- Communication surge protection devices.
- Microprocessor-based controller, menu driven, with software integrated with SCDOT's software.
- Lamp driver and control system (unless integral to the DMS).
- Communication interface with modem and serial port for dial-up operation to the central controller.
- Serial port for laptop computer connection with a three (3) foot connector cord to allow operation of the laptop outside the cabinet.
- Local control panel with remote/local control switch.
- Adjustable shelves as required for components.
- Interior lighting and duplex receptacle.
- Interior ventilation.
- All interconnect harnesses, connectors, and terminal blocks.
- All necessary installation and mounting hardware.
- Communications from the local controller to the sign shall be over single mode or multimode fiber optic cable. The fiber cable and transceivers shall meet the specifications for those components spelled out in their respective specifications in this contract. The single mode fiber optic transceivers shall be Optelecom 9245 or equal.

The DMS controller and associated equipment will be housed in a NEMA 3R cabinet made of 5052-H32 sheet aluminum at least 1/8" thick. All seams will be welded with continuous solid welds. The cabinet shall be sized to house all equipment plus 20% vacant space for future equipment requirements. The cabinet shall be a Caltrans specified 332 cabinet shell (see Install 332 cabinet specifications).

k. Central Controller

Deleted for this project.

l. Sign Structures

The contractor is responsible for the design, manufacture and construction of each sign structure needed for the DMS. Each structure that spans a cross both directions of road way shall be designed to handle one sign in each direction. Catwalks for bridge structures, cantilever, and any other shall extend from sign to vertical up right. Each structure shall be made part of the bid item for the DMS. Reference is made to SCDOT's Signing Specifications. The Contractor must perform all cross-sections as outlined in the Signing Specifications. Overhead structures which are fabricated incorrectly and do not fit the specific location shall be replaced by the Contractor at no additional cost to the Department. Alterations that involve cutting or welding or any procedure which will damage the factory-applied protective finish of the posts will not be allowed after the structures are fabricated.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

SUBMISSION OF REQUIRED DESIGN INFORMATION AND DESIGN DRAWINGS:

It is essential that the signing contractor make all required design submissions within 90 days following award of this contract, except as follows:

Section 9.103 of Signing Specifications is amended to also require that design drawings for Overhead Sign Structures and the details of footings be submitted within 90 (ninety) calendar days following award of the contract.

Section 9.104 of the Department's SPECIFICATIONS FOR SIGNING EXPRESSWAYS AND FREEWAYS is revised to require that the independent registered Professional Engineer who checks the designs for the overhead structures and footings be licensed by the State of South Carolina.

2. OVERHEAD SIGN STRUCTURE DESIGN

Section 9.101 of the Signing Specification is amended to require stiffener plates between the base plate of all cantilever structures and the upright. The plates should be equally spaced about the base plate between the anchor bolt holes. All structures shall have at least six (6) anchor bolts per base plate. Also, the Contractor shall provide direct bolted connections of the sign to the structure sign hangers at the top and bottom of the signs. This shall be provided at all four corners of the sign. The top hole on each hanger shall be slotted to provide for adjustment.

Soil borings are not provided for the locations of the new Overhead Structures. The Contractor will be responsible for obtaining subsurface investigation data at the locations of the overhead structures shown in the plans for the purpose of overhead structure footing design. Special Note: Footings shall be designed using a maximum allowable toe pressure of 2000 pounds per square foot.

a. System Maintenance

The Contractor will be responsible for all routine or preventive maintenance, repair (up to and including replacement) of defective parts, and any operating costs of the DMS System until final acceptance of the project. Any repair or replacement will be performed within twenty-four (24) hours of discovery or notification of a non-working piece of equipment or part.

The Engineer will have the option of placing individual DMS Systems in operation before the complete system is operational. This will not constitute acceptance of the individual DMS System nor relieve the Contractor of maintenance or operating costs for the individual DMS System.

b. Warranties

The Contractor will warrant all equipment, devices, and components provided for this project from defects in workmanship for a period of five (5) years from the final acceptance date.

c. Training

The Contractor will be required to furnish training for the operation and maintenance of the equipment installed on this contract. The training will consist of classroom and "hands-on" training. Training will be furnished as part of the DMS bid item with no additional cost to the Department.

The classroom training will consist of 16 hours of classroom instruction for the operators of the system and will include written instruction in the form of a notebook of operating procedures for all functions of the DMS System. This includes, but is not limited to, the operations required when polling signs for diagnostics, adding messages, changing a message, paging or flashing messages on the DMS, and diagnostics of the local controller.

The maintenance training will consist of a notebook of all preventive maintenance requirements for all equipment, devices, and components of the DMS System. In

addition, the Contractor will furnish personnel to work with SCDOT maintainers of the DMS System during the construction period for any sign systems placed in operation, and for a period of six (6) months from the date of final acceptance. This person will be required to report to the central location of the SCDOT maintenance personnel daily and accompany the SCDOT maintenance person as he performs routine preventive maintenance and emergency repairs, offering instructions and assistance. The Contractor person will also be on call twenty-four (24) hours a day, seven (7) days a week, for emergencies. This person is expected to be located within thirty (30) minutes of the project for emergency calls.

d. DMS Spare Parts

As part of the contract bid for DMS, at the time of final acceptance of the project, the Contractor shall furnish to the SCDOT the following for use as spare parts. These parts will be new.

Four (4) spare Pixel Four (4) spare Driver Card

Two (2) spare sign controllers Two (2) spare power units

Two (2) spare Ground Controller with Ethernet 10/100 port One (1) ITS Cabinet for DMS includes Controller Two (2) Optelecom 9245DT and 9245DR Sets(single mode)

Four (4) Temperature Sensor Four (4) Photo Sensor

e. Controller Functions

The local controller shall respond to the following basic command types. The commands can come from the central controller or the laptop controller in the field. The DMS controller shall be NTCIP compliant. Remote RS232 port shall be provided in the DMS housing to access the local port of the DMS controller. All Controllers shall be Ethernet IP compatible without any additional upgrades or firmware.

- 1) Blank sign
- 2) Display message
- 3) Report status of DMS displays
- 4) Execute sign test
- 5) Reset

The local controller will automatically report the following by initiating a phone call to the central computer. If the central computer's line is busy, the sign controller will keep trying until it gets through.

- 1) Loss of AC power to the DMS.
- 2) Restoration of AC power to the DMS.
- 3) Loss of communication to the DMS.
- 4) The inability of the DMS to respond to a command from the local controller or the local controller cannot respond to a command from the central or laptop controller.
- 5) The failure of any pixel or module to operate when required and the identification of which pixel or module has failed.
- 6) The local controller software will be programmed to produce a report once every twenty-four (24) hours, by time of day and duration, of the messages displayed on the DMS, any pixel outage, any power outages, and any errors experienced by the DMS. This report can be automatic or manual, at the discretion of the operator.

The local controller will, when polled from the central or laptop, respond to the following:

- 1) Message being displayed

- 2) Temperature inside the sign housing
- 3) Status of all components
- 4) Any error messages

CATALOG CUTS ARE REQUIRED

BB. FURNISH AND INSTALL WOOD POLES

DESCRIPTION - This work consists of furnishing and installing CCA treated wood poles for electric services or in this project for overhead fiber installation, of the types and sizes shown on the Plans, in accordance with these Specifications, and in close conformity with the lines shown on the Plans, or as established by the Engineer. Each wood pole installation shall include all related overhead and underground hardware, and back guy assemblies.

1. Materials

Materials used shall meet the following requirements.

a. Wood Pole

1) Wood

Each pole shall be Southern Yellow Pine that is cut, stored, seasoned, and manufactured in accordance with specification ANSI 05, 1-19-79. Prohibited defects include: red heart, shakes in the tops of poles, short crooks, double-sweep, splits or through-checks, nails & spikes, and excessive knots. Scars shall not be deeper than 2.5 cm (1 inch), nor longer than one (1) metre (3 feet). Poles shall not have excessive butt-swell, nor more than one twist per pole length. Sweep in two planes is prohibited.

2) Straightness

All poles shall be straight to the extent that a line drawn from the center of the butt end, to the center of the tip end shall lie within the middle two-thirds of the body of the pole at all points. Poles shall also be free from short crooks, in which the surface deviation from straightness in any 1.5 metres (5 feet) of length, exceeds 38 mm (1.5 inches) at any location, as determined by a straight edge.

3) Treatment

Each pole shall be prepared and pressure-treated in accordance with American Wood Preservers Association (AWPA) Standards C1, C3, C4, and M1. Treatment shall be "SALT TREATED", CCA- CHROMATED COPPER ARSENATE, and shall conform to AWPA Standard P5. The retention of the treatment shall be tested in accordance with AWPA Standard M2. The minimum penetration shall be 7.6 cm (3 inches), or 90 percent of the sap-wood. The retention shall be at least 9.6 kgs per cubic metre (0.60 POUNDS PER CUBIC FOOT), as determined by AWPA Standards.

4) Size

POLE SHALL BE CLASS II 35 FEET OR 40 FEET CLASS V 25 FEET (for service feed only) as stated on the Plans.

5) Brand

Each pole shall have a "brand" 3.6 metres (12 feet) above the butt-end, showing the Manufacturer. Plant-location with month and year of treatment, "Southern Pine CCA 0.60 (9.8)", and the Pole Class and Length. A Metal Tag showing Pole Length and Class shall be fixed to the butt-end; and the Length and Class shall be stamped on the top-end.

6) Inspection

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Each pole shall have the "Brand Mark" of an inspection-company that has been approved by the Department.

b. Back-Guy Anchor

Wood Poles require the installation of one-or-more back-guy cable assemblies, as needed. (See BACK-GUY.) The installation shall be made in accordance with the Installation Details, or the Standards.

c. Ground Wire

Each pole shall be grounded in accordance with the Installation Details or the Standards. A No. 6 AWG, SOLID, bare-copper ground wire (ASTM B2) shall run the length of wooden poles, and extend 15 cm (6 inches) above the top end.

d. Ground Rod

The Ground Rod shall be copper-clad, conforming to RUS 13, having a minimum size of 1.6 CM DIAMETER BY 2.4 METRES IN LENGTH (5/8 inch by (8 feet). A ground rod clamp shall also be used (heavy duty bronze or brass).

2. Construction

a. Location

The general location of each pole is shown on the Plans. The Contractor shall determine the final location of the pole, which shall be approved by the Engineer. Consideration shall be given to the property lines, underground utilities, and overhead clearances (including the guy anchor assembly).

b. Hole

A hole shall be drilled TWO METRES (6 feet) DEEP, or as shown on the Plans. The diameter shall be larger than the pole by approximately 10 cm (4 inches) all around. The hole shall be of uniform diameter, and cleanly augured.

c. Sidewalk

When the pole is installed in a side walk, then the hole shall be cleanly cut 15 cm (6 inches) larger than the pole on all sides. After installation of the pole, and back filling the hole, then expansion joint material shall be placed around the pole, and tacked in place. Conduit running to the pole shall be installed at this time, in the cut. Concrete shall be poured around the pole to a depth of 10 cm (4 inches) and neatly troweled level. This work shall be considered incidental to pole installation, unless a pay item has been established for concrete patching or side walk.

d. Installation

Poles shall be vertical, except at corners, where they shall be RAKED away from the strain, 5 to 10 cm (2 to 4 inches) per 3 metre (10 feet) length. Back guy assemblies shall be installed in line with the strain of each span wire. After installing, the hole shall be back-filled with clean earth or sand (no rocks or debris), placed in 30 cm (1 foot) layers; each layer moistened and compacted. Excess earth shall be removed from the site. (A 5 cm (2 inch) mound around the pole base is acceptable.)

e. Utility Poles

Where poles are to be used for joint-use UTILITIES, they shall be installed in accordance with all local codes, and with the requirements of the Utility Company. Cross Arms shall be provided if required by the Utility Company.

f. Grounding

Each pole shall have a No. 6 Bare SOLID copper ground wire running the entire length. The ground wire shall be securely attached and bonded while the wood pole is laying on the ground. It shall extend 15 cm (6 inches) above the top end, have a 60 cm (2 foot)

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

coil (slack) at the top end, and extend down to the bottom, and have another 60 cm (2 foot) coil on the bottom end. The ground wire (and the coils) shall be attached using galvanized 30 mm (1-1/2 inch) wire staples, on 60 cm (2 foot) centers above 3 metres (14 feet), and on 30 cm (1 foot) centers below 3 metres (14 feet). (The spacing change will be at 2.4 metres (8 feet) above grade.)

g. Ground Rod

One wood pole at each intersection shall have a GROUND ROD. Usually this would be the pole having the electrical service from the Power Company. The ground rod shall be driven vertically into the earth, until it extends about 5 cm (2 inches) above local grade. Then a separate No. 6 AWG bare, STRANDED copper wire shall be used to bond the electrical service and the overhead cable (and pole ground wire) system to the ground rod, using a grounding clamp.

h. Back Guying

Wood poles used to support service wire could require back guying, especially at turns. (See BACK- GUY.) It is the responsibility of the Contractor to install sufficient numbers of back guy assemblies, to insure the stability of wood pole installations. This may include: double-guying; extra large anchors; or Re- guying Utility Company poles. The Contractor shall inform the Engineer when additional back guy assemblies are required. When the back guy is installed in a side walk, then the procedures of paragraph 2.3 above shall be followed.

3. ACCEPTANCE

Acceptance of each wood pole shall include checking for the pressure-treatment inspection company Brand Mark, plus visual inspection by the Engineer. The visual inspection shall be made of the pole, overhead cables, grounding, and back guy assembly. The complete installation shall be structurally sound, and the final pole placement shall be vertical, or raked as specified. Poles NOT meeting this inspection, shall be replaced by the Contractor, without further cost to the project.

CATALOG CUTS ARE REQUIRED

CC. FURNISH AND INSTALL STEEL CABLE

DESCRIPTION – This work shall consist of furnishing and installing splice-free lengths of Steel Cable with cable supports, installing back guys, etc., at locations shown on the Plans or as established by the Engineer.

1. Materials

Materials shall meet requirements listed below:

a. Fabrication

Steel Cable shall be fabricated of seven (7) steel wires, Class A double galvanized in accordance with ASTM A-475, and twisted into a single concentric strand to conform with the following schedule:

Diameter mm	(inches)	Strand Size (AWG)	Tensile Strength	
			Newtons	(pounds)
6.35	(1/4)	14	14,011	(3,150)
9.53	(3/8)	11	30,913	(6,950)

b. Usage

1) Span Wire

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

All Steel Cable used as span wire shall be 9.53 mm (3/8 inch) in diameter, unless otherwise noted on the Plans.

2) Messenger Wire

All Steel Cable used as messenger shall be 6.35 mm (1/4 inch) in diameter, unless otherwise noted on the Plans.

3) Tether Wire

All Steel Cable used as tether wire shall be 6.35 mm (1/4 inch) in diameter, unless otherwise noted on the Plans.

4) Back Guy

All Steel Cable used for back guying shall be 9.53 mm (3/8 inch) in diameter, unless noted otherwise on the Plans.

c. Cable Supports

1) Aluminum Tie-wrap

Shall be Flat Aluminum Armor Tape, 1.2 mm (0.05") Thick X 7.6 mm (0.30") Wide, typically furnished in 4.5 kg (10 pound) coils.

2) Where specifically required, Support Rings (also called "cable rings", "messenger rings") shall be galvanized in accordance with ASTM A-153, and the design approved by the Engineer, and shall be 3 to 8 cm (2 to 3 inches) in diameter (to contain the Electrical Cables), and sized to specifically match the Steel Cable.

d. Miscellaneous Hardware

1) All hardware and fittings shall be of the type shown on the Standards or the Construction and Installations Details.

2) All hardware and fittings shall be made of galvanized steel or non-corrosive metal. The tensile strength of all hardware shall be equal-to or greater-than the Steel Cable installed.

3) All oval eye-bolts used to connect the automatic compression dead-end clamps to wooden poles, shall be 1.9 cm (3/4 inch) diameter. S-hooks shall be the same diameter as the cable. Fiberglass insulators shall be fabricated from epoxy-resin impregnated fiberglass strands, and have a ten-sile strength fifty (50%) percent greater than the Steel Cable.

2. Certification

The Bidder shall provide a Certification from the Manufacturer or Vendor, that the Steel Cable has been tested to meet or exceed the required tensile strength.

3. Construction Methods

a. Span Wire

1) General

All Span Wire shall be installed as shown the Standards, or on the Construction and Installation Details. Note that different methods and materials are required for Wood Poles and Steel Poles.

a) Before erecting the Span Wire, the Contractor shall determine the length of cable required to span the distance indicated on the Plans. Sufficient additional length shall be allowed to compensate for sag, pole connections, and adjustments, to make the whole assembly consistent with the Design Details, or the Standards. NO MID-SPAN SPLICES SHALL BE PERMITTED.

b) The Contractor shall set the Span Wire so that the height of the installed signal heads, including all hardware, shall conform to the clearances shown on the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Design Details or the Standards, or as directed by the Engineer.

- c) The Span Wire shall not be permanently "tied-off" until all signal heads, signs, and cables are in place.
- d) The Contractor shall not erect any Span Wire which lays on, or is likely to rub a Utility Company's cable. If a Span Wire, as erected, is within 15 cm (6 inches) of any other cable, wire, or structure, it shall be protected with plastic wire-guards.
- e) When required by the Utility Company, or by the applicable electrical Code, strain- type fiberglass insulators shall be installed.

2) Cables from STEEL POLES

Steel Poles are essentially electrical conductors.

- a) A Roller Type Pole Clamp shall be used, attached at the proper height.
- b) The free-end of the cable shall be secured with a 15 cm (6 inch) galvanized steel clamp, with 16 mm (5/8 inch) galvanized bolts. The clamp shall be placed approximately 30 cm (1 foot) from the pole. Cable-grips are not permitted.
- c) The ends of the cable shall be covered with "servisleeves" to prevent unraveling.
- d) The SAG shall be THREE (3%), TO FIVE (5%) PERCENT, fully loaded.

3) Cables from WOODEN POLES

Wooden poles are essentially electrical insulators, and thus require extensive GROUNDING and BONDING procedures, as shown on the Construction and Installation Details, and the Standards.

- a) The SAG shall be typically FIVE (5%) PERCENT, fully loaded.
- b) The height of attachment shall be sufficient to provide the required road-clearance, including sag.
- c) Shall be installed in accordance with the requirements of the Utility Company.
- d) May require the installation of a back guy assembly as required in FURNISH AND INSTALL BACK GUY
- e) Shall be electrically bonded.

b. Messenger Wire

- 1) Where Messenger Wire is attached to traffic signal poles, it shall be installed in the same manner as specified for span wire, but with relatively little sag.
- 2) Where Messenger Wire is attached to utility poles, it shall be installed in accordance with the UTILITY COMPANY'S SPECIFICATIONS.

c. Tether Wire

Where Steel Cable is specified to tether signal heads and/or traffic signs, it shall be installed as indicated on the Construction Details, or Standards. Generally, galvanized S-hooks should be used at the pole ends to permit "break-away" action.

d. Back Guy

See FURNISH AND INSTALL WOOD POLES. See FURNISH AND INSTALL BACK GUY. See the CONSTRUCTION AND INSTALLATION DETAILS.

e. Cable Supports

- 1) Cable supports shall be used to support electrical cables from span wire and messenger wire. Cable Supports shall be spaced at 25 CM (10 INCH) INTERVALS.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- 2) When Aluminum Tie-Wraps are used, they shall be installed by wrapping 3-full turns TIGHTLY around the bundle formed by the steel cable and all electrical cables, then cutting off from the tape coil.

DD. FURNISH AND INSTALL BACK GUYS

DESCRIPTION – This work consists of furnishing and installing Back-Guy cable assemblies to secure wood poles, at locations shown on the Plans, and in accordance with these Specifications, and the Installation Details and Standards.

RESPONSIBILITY – It is the responsibility of the CONTRACTOR to assure that the number and size of Back-Guy assemblies is fully sufficient to anchor every wood pole, corner messenger cable pole, and Utility Company pole (where required).

1. Materials

Materials used shall meet the following requirements:

a. Assembly

From the top-down, a Back-Guy Assembly shall consist of: eye-type thru-bolt, guy-hook, strandvise, jumper-bonding clamp, the steel cable (10 mm (3/8-inch) guy-cable stranded), another strandvise, and a Screw-type guy anchor.

b. Rust Proof

All parts shall be as shown on the Installation Details or the Standards. All hardware shall be hot-dip galvanized in accordance with ASTM Standard A-153.

c. Parts List

Acceptable parts are listed below:

- 1) Guy Anchors – One piece screw type guy-anchors, shall conform to EEI-TD-2, 25 mm (1 in.) diameter, 2.4 METRES (8 FEET) LONG, thimble eye type. (Joslyn No. J-6550-WCA or approved equal)
- 2) Guy Guards shall be Joslyn J5518 or approved equal yellow plastic (PVC) sunlight resistant, 2.4 metres (8 ft.) long.
- 3) Spool Insulators shall be a Joslyn J101 or approved equal.
- 4) Neutral Spool bracket (Clevises) shall be a Joslyn J251 or approved equal.
- 5) Machine Bolts shall be Joslyn J8812 through J8818 or J8912 through J8918 or approved equal.
- 6) Lock washers shall be Joslyn J139 or J140 or approved equal.
- 7) Reliable Universal Strandvise (or approved equal) shall be used for guy and messenger cable deadends.
- 8) Oval Bolts shall be Joslyn J9412 through J9418 or J9512 through J9518 or approved equal.
- 9) Oval Eye Nuts shall be Joslyn J1092 or J1093 or approved equal.
- 10) Square Washers shall be Joslyn J1074 or J1078 or approved equal.
- 11) Curved Square Washers shall be Joslyn J6822 or J133 or approved equal.
- 12) Cable – SEE FURNISH & INSTALL STEEL CABLE; using the 10 MM (3/8 IN) DIAMETER CABLE SIZE.
- 13) Cable Clamps: 3-bolt clamps shall conform to EEI-TDJ-23, (100 mm (4 in.) and 150 mm (6 in.) sizes)
- 14) Nuts shall be Joslyn J8563 or J8564-1 or approved equal.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- 15) Side-walk Bridge-over shall be Joslyn J1502 and J1501 with galvanized ridged conduit between or approved equal.
- 16) Lag Bolts shall be Joslyn J8652-1/2HH or J8754P or approved equal.
- 17) Guy Attachments (Hooks) shall be Joslyn P134AXW or approved equal.
- 18) Bonding Clamps shall be Joslyn J8300 or approved equal.

2. CONSTRUCTION

- a. A Back-Guy Assembly shall be installed:
 - 1) Where shown on the plans;
 - 2) In conjunction with installation of Steel Cable as span wire;
 - 3) In conjunction with the installation of a wooden pole;
 - 4) Where required by the Utility Company to "dress" pole to which signal equipment is attached; or, At corner/turning wood poles that are used for messenger cable runs.
- b. The installation of the wood pole, Back-Guy Assembly, and the span wire, shall have the construction staged for the safety of the motorist, pedestrian, and ITS construction worker.
- c. See WOOD POLE.
- d. The span wire, service wire, and Back-Guy Assembly shall be stretched, adjusted, and then ADJUSTED to produce the specified amount of span wire sag, the proper clearance, and still create a nearly vertical wood pole.
- e. The CONTRACTOR shall assure that the Back-Guy Assembly is sufficiently strong to handle the pull of all span wires. This shall include consideration of the earth/soil type into which the ground anchor is buried. The CONTRACTOR shall furnish EXTRA LARGE ANCHORS and/or MULTIPLE-ANCHOR ASSEMBLIES if needed. Special anchors shall be used for solid rock.
- f. Where a pedestrian sidewalk is adjacent to a wood pole, the CONTRACTOR shall furnish as an incidental item, a sidewalk "bridge-over" assembly.
- g. The compass angle of the Back-Guy shall be reasonably IN LINE with the strain of the overhead cable: that is, in line with each span wire. Thus most signal poles should have two (2) Back-Guys, installed at right angles to each other. The use of a single diagonal Back-Guy is generally unacceptable.
- h. The Back-Guy shall be installed (wherever possible) to provide as a minimum: rise=2 / run=1 (i.e. 2/1). For example, if the Back-Guy is attached at 8 metres (26 feet), the anchor should be at a minimum of 4 metres (13 feet) from the pole. This corresponds to an angle with the earth of about 60 degrees.
- i. All work shall be performed within the public Right of Way, and particular care shall be taken to assure that the Back-Guy does not extend into private property.
- j. The Back-Guy shall be installed where it will not interfere with traffic, giving particular attention to private driveways. Where damage is likely (say, edge of driveway), then a STEEL GUY GUARD shall be installed to protect the cable. When shown on the Plans, a CONCRETE TIRE/WHEEL STOP (curb) shall be placed at the base of the Back-Guy, anchored/pinned with 400 mm (2 ft.) pieces of reinforcement bar.
- k. NO splices shall be allowed in the steel cable.

3. INSPECTION

The Engineer shall inspect each installation of wood pole, span wire, and Back-Guy, for proper clearance, dress, and tension. At the direction of the Engineer, the CONTRACTOR shall re-install or replace improper installations, without further compensation.

CATALOG CUTS ARE REQUIRED

EE. REMOVAL SALVAGE AND DISPOSAL OF EQUIPMENT AND MATERIALS

DESCRIPTION – This item consists of the Removal and Salvage, or the Removal and Disposal of equipment and materials, during the construction of this project. Construction includes new installations, and the modification, or removal of existing ITS devices. It shall be disposed of, as stated below:

1. GENERAL

a. Removal and Salvage

These items are to be carefully removed from the job site, salvaged, and returned to the Department. The items of major equipment to be salvaged are listed on the Plans. The Contractor shall deliver, (and obtain a RECEIPT for), the salvaged equipment, to: **SCDOT Intelligent Transportation Systems Maintenance Facility ** in Columbia, SC Contact the ITS Field Operations Manager at (803)-737-0394 for deliveries.

b. Disposal

Material NOT to be salvaged, shall be removed from the job site, become the property of the Contractor; and should be properly disposed of by the Contractor, at an APPROVED LAND FILL (or material reclamation yard). Any materials designated as HAZARDOUS WASTE shall be disposed in accordance with regulations enforced by the SC Department of Health and Environmental Control (DHEC), Bureau of Solid and HAZARDOUS Waste; (803)-734-5000 for information.

c. Inspection

Removal and disposal quantities will not be measured as pay items, but shall be included in the price bid for Removal, Salvage, and Disposal. FINAL ACCEPTANCE and Final Payment will be withheld, if the Contractor has not removed unneeded equipment from the job site, and if the Contractor cannot present RECEIPTS from the Shop showing that the salvaged equipment has been delivered to the Department as specified.

d. Holes

Every hole caused by removing old equipment shall be filled THE SAME DAY. It shall be back-filled, compacted, and reseeded/sodded, to the satisfaction of the Engineer. Holes in PAVEMENT shall be cleanly side-trimmed, then brought to grade and finished with the same paving material as the adjacent pavement. Sidewalk "squares" shall be completely replaced (complete square), using forms and expansion material.

2. SPECIFIC ITEMS

a. Controllers and Cabinets

Controllers and Cabinets to be removed by the Department. Contractor to be responsible for the foundations of ground-mounted cabinets and shall be removed completely or cleared to 0.3 meters (1 ft.) below ground.

b. Cameras

Cameras units to be removed by the Department. and salvaged shall be carefully dismantled, keeping as much of the

c. Wood Poles

Wood Poles that are not utilized in the new ITS system, and are not required by other utilities, shall be removed and disposed of. Back guys, grounding systems, and miscellaneous hardware shall be disposed of.

d. Concrete Poles

Concrete poles shall be removed and disposed of by contractor.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

e. Miscellaneous Equipment

Minor equipment shall be removed from the site and discarded. This includes steel cable, electrical cable, fiber optic cable, concrete pads, and spliceboxes/pullboxes/handboxes. Underground conduit and detector loops not utilized, shall be abandoned in place.

f. DMS and Structures

The DMS shall be carefully removed and turned in to the Department. Care shall be taken to insure the DMS sign is not damaged during removal or delivery to the ITS Field Operations Office. The structure shall be removed and disposed of by the contractor.

FF. INSTALL DEPARTMENT SUPPLIED EQUIPMENT

DESCRIPTION - This work shall consist of installing equipment that will be supplied by the department, at the locations designated on the Plans, in accordance with the appropriate Specification, and the applicable Design Detail or Standard.

1. Materials

The Plans and BID or Proposal Forms, state specifically which material will be supplied by the Department. ALL OTHER MATERIALS SHALL BE ASSUMED TO BE FURNISHED BY THE CONTRACTOR. The Contractor should refer to the appropriate "Furnish and Install..." Specification to determine what other materials will be required to complete the installation. Those materials must be required to complete the installation. Those materials must then meet the physical Specifications stated. The Contractor shall also supply all miscellaneous materials that will result in a complete and acceptable project.

2. Certification

The Contractor shall provide certification that any material they supply for this item will meet the Specifications.

3. Guarantee

For any materials they supply, the Contractor shall furnish the Department with all warranties offered by the manufacturer as normal trade practice.

4. Construction Methods

a. General – All workmanship and construction methods shall be in accordance with the appropriate Specification and in agreement with the applicable Design Detail or Standards.

b. Example – As an example, take the BID item – "INSTALL CONTROLLER BASE-MOUNTED CABINET-- EACH". The Contractor shall then refer to the Specification titled "INSTALL CONTROLLERS AND CABINET". They shall then furnish any other necessary materials, and shall complete the work needed to result in a finished installation. The Contractor shall also refer to the Plans, and to the Design Details and Standards.

c. The Contractor is responsible for picking up the equipment to be supplied, at the ITS Field Operations Office located in Columbia SC or appropriate DOT Depot or Shop, and for providing any loading equipment and trailers required. Receiving and pick up of Department furnished items shall be scheduled 48 hours in advance with the ITS Field Operations Manager located in Columbia SC. The Specified Units shall be that stated in the "Install..." specification.

GG. SCDOT INTELLIGENT TRANSPORTATION SYSTEMS SPECIFICATIONS FOR THE REPLACEMENT OR NEW INSTALLATION OF TRAFFIC COUNTING, OR CLASSIFICATION SYSTEMS

GENERAL DESCRIPTION

This work shall be performed by the SCDOT Intelligent Transportation Systems (ITS) Staff and the on-call ITS Maintenance/Installation Contractor. All equipment and labor will be provided by

the ITS Field Operations Unit. Contact the ITS Field Operations Manager located at 1408 Shop Rd. Columbia, SC 29201, Phone: (803) 737-1163 for cost estimates, scheduling, reclaiming, reinstallations, maintenance and installations.

(54) DIVISION 600: MAINTENANCE AND CONTROL OF TRAFFIC

A. CONSTRUCTION (SUB-SECTION 601.4)

1. Sub-section 601.4.2 Construction Vehicles (paragraph 2) -

When working within the rights-of-way of access-controlled roadways such as Interstate highways, the Contractor's vehicles may only change direction of travel at interchanges. These vehicles are prohibited from crossing the roadway from right side to the median or vice versa. Use a flagger to control the Contractor's vehicles when these vehicles attempt to enter the roadway from a closed lane or the median area. Ensure the flagger does not stop roadway traffic, cause roadway traffic to change lanes, or affect roadway traffic in any manner. The Contractor's vehicles may not disrupt the normal flow of roadway traffic or enter the travel lane of the roadway until a sufficient gap is present.

The Contractor shall have flaggers available to control all construction vehicles entering or crossing the travel lanes of secondary and primary routes. The RCE shall determine the necessity of these flaggers for control of these construction vehicles. The RCE shall consider sight distance, vertical and horizontal curves of the roadway, prevailing speeds of roadway traffic, frequency of construction vehicles entering or crossing the roadway and other site conditions that may impact the safety of the workers and motorists when determining the necessity of these flaggers. Ensure these flaggers do not stop roadway traffic, cause roadway traffic to change lanes or affect roadway traffic in any manner. The Contractor's vehicles may not disrupt the normal flow of roadway traffic or enter the travel lane of the roadway until a sufficient gap is present.

When working within the rights-of-way of access-controlled roadways with posted regulatory speed limits of 55 MPH or greater and average daily traffic volumes {ADT} of 10,000 vehicles per day or greater, i.e. Interstate highways, all construction and work vehicles possessing any one or more of the vehicular characteristics listed below are only permitted to enter and exit a right or left shoulder work area during the presence of active lane closures unless otherwise directed by the RCE. These vehicles are not permitted to enter or exit these work areas without the presence of active lane closures unless otherwise directed by the RCE. Shoulder closures are unacceptable and insufficient methods for control of traffic at ingress / egress areas for these vehicles. The restrictive vehicular characteristics include the following:

- Over six (6) tires
- Tandem rear axles
- A base curb weight greater than 8000 lbs.
- A gross vehicular weight greater than 12000 lbs. unless performing duties as a shadow vehicle while supporting a truck mounted attenuator
- A trailer in tow except under the following conditions:
 - Trailers transporting traffic control devices (including but not limited to standard and 42" oversized traffic cones, portable plastic drums, signs, portable sign supports, u-channel and square steel tube sign posts) relative to the installation of lane closures, shoulder closures or other traffic control operations approved by the RCE
 - Trailer mounted traffic control devices (including but not limited to advance warning arrow panels, changeable message signs, temporary traffic signals, highway advisory radios, work zone intelligent transportation systems and trailer towed truck mounted attenuators)

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

2. Sub-section 601.4.2 Construction Vehicles - Auxiliary Warning Lights for Vehicles and Equipment

Supplement all construction and/or construction-related vehicles and equipment that operate in a stationary or mobile work zone within or adjacent to a roadway within the highway rights-of-way with AMBER or YELLOW colored high intensity rotating or strobe type flashing auxiliary warning light devices. Utilize, install, operate and maintain a single or multiple lighting devices as necessary to provide visibility to approaching motorists.

All auxiliary warning light models shall meet *Society of Automotive Engineers (SAE) Class I* standards and SAE Standard J575 relative to *Tests for Motor Vehicle Lighting Devices and Components* and these specifications.

The amber/yellow color of the dome/lens of an auxiliary warning light device shall meet SAE Standard J578 for amber/yellow color specifications.

Auxiliary warning lights with parabolic reflectors that rotate shall rotate around a halogen lamp at a rate to produce approximately 175 flashes per minute. The parabolic reflector shall produce a minimum 80,000 candle power and a minimum 54,000 candela through an SAE Standard J846 approved amber dome.

Equip strobe type flashing auxiliary warning light devices with photosensitive circuit controls to adjust the lighting intensity in response to changes in ambient light conditions such as from day to night. These lights shall have a double-flash capability rated at approximately 80 double flashes per minute and produce a minimum 24 joules of flash energy at the highest power level setting.

Acceptable auxiliary warning light models shall provide sufficient light output to be clearly recognizable at a minimum distance of 1750 feet.

Mount all auxiliary warning light devices intended to function as the auxiliary warning light system or as an element thereof on vehicles and equipment at locations no less than 3 feet above the ground and in conspicuous locations to provide visibility to approaching motorists.

Auxiliary warning light devices and/or models that mount in the locations of the standard vehicle lighting system are unacceptable as the specified auxiliary warning light system due to restrictive simultaneous visibility capabilities from multiple sight angles. However, auxiliary warning light devices that mount in the standard vehicle lighting system locations are acceptable as supplements to the specified lighting devices mounted in locations that do meet the minimum height requirements and provide simultaneous visibility capabilities from multiple sight angles.

Standard vehicle hazard warning lights are only permitted as supplements to the specified auxiliary warning light devices.

3. General Requirements for Providing and Maintaining Traffic Control Devices in the Work Zone (Section 602) –

Sub-section 602.4 Construction (paragraph 8) -

Mount flat sheet signs straight and level and with the face of the signs perpendicular to the surface of the roadway. This requirement applies to flat sheet signs whether they are portable or have the embedded supports. Mount advance construction signs 2 feet from the edge of a paved shoulder or the face of a curb, or if no paved shoulder exists, 6 feet to 12 feet from the edge of an adjacent travel lane to the nearest edge of the signs. The mounting height of single signs mounted on ground embedded sign supports is no less than 7 feet or no greater than 8 feet from the bottom edge of the sign to the grade elevation of the near edge of the adjacent travel lane or sidewalk when a sidewalk is present. Any secondary sign on the same

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

assembly has a minimum mounting height of 6 feet from the ground to the bottom edge of the secondary sign. Ensure that signs mounted on portable sign supports, including advance construction signs, regulatory signs, warning signs, etc., have a minimum mounting height of 5 feet from the ground to the bottom edge of the sign. Provide special sign mounting assemblies, when necessary, in areas of double-layered guardrail, concrete median barrier, or bridge parapet walls.

B. CATEGORY I TRAFFIC CONTROL DEVICES (SECTION 603) –

1. Sub-section 603.2.2 Oversized Traffic Cones (paragraph 6) -

Reflectorize each oversized traffic cone with 4 retroreflective bands: 2 orange and 2 white retroreflective bands. Alternate the orange and white retroreflective bands, with the top band always being orange. Make each retroreflective band not less than 6 inches wide. Utilize Type III – Microprismatic retroreflective sheeting for retroreflectorization on all projects let to contract after May 1, 2010 unless otherwise specified. Separate each retroreflective band with not more than a 2-inch non-reflectorized area. Do not splice the retroreflective sheeting to create the 6-inch retroreflective bands. Apply the retroreflective sheeting directly to the cone surface. Do not apply the retroreflective sheeting over a pre-existing layer of retroreflective sheeting.

2. Sub-section 603.2.3 Portable Plastic Drums (paragraph 3) -

Reflectorize each drum with Type III – Microprismatic retroreflective sheeting: 2 orange and 2 white retroreflective bands, 6 inches wide on all projects let to contract after May 1, 2010 unless otherwise specified. Alternate the orange and white retroreflective bands with the top band always being orange. Ensure that any non-reflectorized area between the orange and white retroreflective bands does not exceed 2 inches. Do not splice the retroreflective sheeting to create the 6-inch retroreflective bands. Apply the retroreflective sheeting directly to the drum surface. Do not apply the retroreflective sheeting over a pre-existing layer of retroreflective sheeting.

C. CATEGORY II TRAFFIC CONTROL DEVICES (SECTION 604) –

1. Sub-section 604.2.1 Type I and Type II Barricades (paragraph 3) -

Reflectorize these barricades with Type VIII or IX Prismatic retroreflective sheeting on all projects let to contract after May 1, 2012 unless otherwise specified. Ensure that the retroreflective sheeting has alternate orange and white stripes sloping downward at a 45-degree angle in the direction of passing traffic. The stripes shall be 6 inches wide.

2. Sub-section 604.2.2 Type III Barricades (paragraph 3) -

Reflectorize these barricades with Type VIII or IX Prismatic retroreflective sheeting on all projects let to contract after May 1, 2012 unless otherwise specified. Ensure that the retroreflective sheeting has alternate orange and white stripes sloping downward at a 45-degree angle. Apply the sloping orange and white stripes in accordance with the requirements of the Plans, SCDOT Standard Drawings and the MUTCD. The stripes shall be 6 inches wide.

D. TEMPORARY CONCRETE BARRIER (SUB-SECTION 605.2.3.2) –

1. Sub-section 605.2.3.2 Temporary Concrete Barrier (paragraph 6) -

Previously used temporary concrete barrier walls are subject to inspection and approval by the RCE before use. Ensure that previously used temporary concrete barrier walls are in good condition. Defects to a temporary concrete barrier wall that may disqualify a section of wall for use include gouges, cracks, chipped, or spalled areas. A defect that exposes reinforcing steel warrants immediate disqualification. A disqualification grade type defect shall consist of measurements in excess of 1 inch, entirely or partially within the boundaries of the end

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

connection areas and the drainage slot areas as illustrated in the “Standard Drawings for Road Construction”, and/or in excess of 4 inches for all areas beyond the end connection areas. To warrant disqualification, these measurements shall exceed the specified dimensions in all three directions, width, height, and depth. A defect that exceeds the specified dimensions in only one or two of the three directions does not warrant disqualification.

Temporary concrete barrier walls with defects less than 6 inches in all three directions, width, height, and depth that do not expose reinforcing steel may be repaired in accordance with the following requirements. Repair is prohibited on temporary concrete barrier walls with defects 6 inches or greater in all three directions, width, height, and depth.

For repair of temporary concrete barrier walls with defects less than 6 inches in all three directions, width, height, and depth that do not expose reinforcing steel, repair the defect with a premanufactured patching material specifically fabricated for patching structural concrete. The strength of the patch must meet or exceed the design strength of the class 3000 concrete of the temporary concrete barrier wall. Perform the repair procedures in accordance with all requirements and instructions from the manufacturer of the patch material. Use a bonding compound between the patch material and the concrete unless specifically stated by the manufacturer that a bonding compound is not required. If the manufacturer states that application of a bonding compound is optional, SCDOT requires application of a bonding compound compatible with the patch material. If cracking occurs within the patched area, remove the patch material completely and repeat the repair process. The contractor shall submit documentation stating all repairs have been conducted in accordance with these requirements prior to installing any temporary concrete barrier walls with repairs. Utilization of temporary concrete barrier walls with repairs shall require approval by the RCE prior to installation.

The Contractor shall submit certification documents for the patch material utilized for repairs to the Engineer prior to placing temporary concrete barrier walls that have been repaired on the project site.

*** (Effective on all projects let to contract after January 1, 2017)***

2. Sub-section 605.2.3.2 Temporary Concrete Barrier (paragraph 5) -

In regard to projects let to contract after January 1, 2017, ALL *NCHRP Report 350* compliant temporary concrete barrier walls placed on a project site SHALL comply with the requirements for the recessed approval stamp as directed by the *SCDOT Standard Drawings*. Those *NCHRP Report 350* compliant temporary concrete barrier walls with the original recessed approval stamp that reads "SCDOT 350" will continue to be acceptable on projects let to contract after January 1, 2017. However, those temporary concrete barriers with the "SCDOT 350" identification plate attached to the side of the barrier walls with mechanical anchors previously grandfathered will no longer be acceptable on projects let to contract after January 1, 2017.

E. **CONSTRUCTION SIGNS (SUB-SECTION 605.4.1.1) –**

*** (Effective on all projects let to contract after January 1, 2016) ***

On all projects relative to interstate highways let to contract after January 1, 2016, all signs attached to portable sign supports on and/or adjacent to interstate highways shall be rigid. Fabricate each of these rigid signs from an approved aluminum laminate composite rigid sign substrate approved by the Department. Utilization of signs fabricated from roll-up fabric substrates attached to portable sign supports installed on and/or adjacent to interstate highways will no longer be acceptable on projects let to contract after January 1, 2016.

ONLY those portable sign supports specified and approved for support of rigid signs fabricated from approved aluminum laminated composite rigid sign substrates and included on the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Approved Products List for Traffic Control Devices in Work Zones, latest edition, are acceptable. To facilitate location of acceptable portable sign supports, the listing of portable sign supports is now separated into two (2) sections; “Portable Sign Supports for Use with Roll-Up Signs ONLY” and “Portable Sign Supports for Use with Roll-Up Sign Substrates and Rigid Sign Substrates”.

The trade names of the approved aluminum laminate composite rigid sign substrates are “Acopan”, “Alpolic”, “Dibond” and “Reynolite”. These rigid sign substrates are restricted to thicknesses no greater than 2 millimeters.

Rigid signs fabricated from standard aluminum sign blanks or any other rigid material other than Acopan, Alpolic, Dibond or Reynolite are PROHIBITED for attachment to portable sign supports. However, rigid signs fabricated from standard 0.080 and 0.100 inches thick aluminum sign blanks will continue to be acceptable for mounting on ground mounted sign supports.

Signs fabricated from roll-up fabric substrates approved by the Department will continue to be acceptable for use on and/or adjacent to secondary and primary roadways unless otherwise directed by the Department.

The minimum mounting height of signs mounted on these portable sign supports shall continue to be 5 feet from the ground to the bottom edge of the sign except where a minimum 7 foot mounting height is required in accordance with the standard specifications, the standard drawings, these special provisions and the MUTCD, latest edition.

F. TRUCK-MOUNTED ATTENUATOR (SUB-SECTION 605.4.2.2) –

1. Sub-section 605.2.2.2.3.3 Color (paragraph 1) -

Use industrial grade enamel paint for cover of the metal aspects of the unit. Provide and attach supplemental striping to the rear face of the unit with a minimum Type III high intensity retroreflective sheeting unless otherwise directed by the Department. Utilize an alternating 4 to 8 inch black and 4 to 8 inch yellow 45-degree striping pattern that forms an inverted “V” at the center of the unit that slopes down and to the sides of the unit in both directions from the center.

2. Sub-section 605.4.2.2 Truck-Mounted Attenuators (paragraph 6) -

A direct truck mounted truck mounted attenuator is mounted and attached to brackets or similar devices connected to the frame of a truck with a minimum gross vehicular weight (GVW) of 15,000 pounds (actual weight) unless otherwise directed. A trailer towed truck mounted attenuator is towed from behind and attached via a standard pintle hook / hitch to the frame of a truck with a minimum gross vehicular weight (GVW) of 10,000 pounds (actual weight) unless otherwise directed.

Each truck utilized with a truck mounted attenuator shall comply with the manufacturer’s requirements to ensure proper operation of the attenuator. The minimum gross vehicular weight (GVW) (actual weight) for each truck shall comply with these specifications unless otherwise directed within the “Remarks” column of the *Approved Products List For Traffic Control Devices in Work Zones* in regard to specific requirements for the device in question.

If the addition of supplemental weight to the vehicle as ballast is necessary, contain the material within a structure constructed of steel. Construct this steel structure to have a minimum of four sides and a bottom to contain the ballast material in its entirety. A top is optional. Bolt this structure to the frame of the truck. Utilize a sufficient number of fasteners for attachment of the steel structure to the frame of the truck to ensure the structure will not

part from the frame of the truck during an impact upon the attached truck mounted attenuator. Utilize either dry loose sand or steel reinforced concrete for ballast material within the steel structure to achieve the necessary weight. The ballast material shall remain contained within the confines of the steel structure in its entirety and shall not protrude from the steel structure in any manner.

G. TRAILER-MOUNTED CHANGEABLE MESSAGE SIGNS (SUB-SECTION 606.3.2) -

1. Sub-section 606.3.2.7 Controller (paragraphs 1-4) -

The controller shall be an electronic unit housed in a weatherproof, rust resistant box with a keyed lock and a light for night operation. Provide the unit with a jack that allows direct communications between the on-board controller and a compatible personal computer. The unit shall have a LCD display screen that allows the operator to review messages prior to displaying the message on the sign.

The controller shall have the capability to store 199 factory preprogrammed messages and up to 199 additional messages created by the user in a manner that does not require a battery to recall the messages. Also, the controller shall allow the operator the capability to program the system to display multiple messages in sequence.

Provide the controller with a selector switch to allow the operator to control the brightness or intensity level of the light source of the sign panel. The selector switch shall include "bright," "dim" and "automatic" modes; inclusion of additional modes is permissible. When the selector switch is in the "automatic" mode, a photosensitive circuit shall control the brightness or intensity level of the light source in response to changes in ambient light such as from day to night and other various sources of ambient light.

Equip each sign with remote communications capabilities, such as utilization of cellular telephone or internet browser technology, to allow the operator to revise or modify the message selection from the office or other remote location. Also, provide protection to prohibit unauthorized access to the controller, (i.e. password protection).

2. Sub-section 606.5 Measurement (paragraph 2) -

Trailer-mounted changeable message signs are included in the lump sum item for Traffic Control in accordance with **Subsections 107.12** and **601.5** of the "2007 Standard Specifications for Highway Construction". No separate measurement will be made for trailer-mounted changeable message signs unless the contract includes a specific pay item for trailer-mounted changeable message signs.

The Contractor shall provide, install, operate, and maintain the trailer-mounted changeable message sign per traffic control set-up as directed by the Plans, the "Standard Drawings for Road Construction", these Special Provisions, the Specifications, and the Engineer.

3. Sub-section 606.6 Payment (paragraph 2) -

In addition to **Subsections 107.12** and **601.6**, the payment for Traffic Control is full compensation for providing, installing, removing, relocating, operating, and maintaining trailer-mounted advance warning arrow panels and trailer-mounted changeable message signs as specified or directed and includes providing the units' primary power source; repairing or replacing damaged or malfunctioning units within the specified time; providing traffic control necessary for installing, operating, and maintaining the units; and all other materials, labor, hardware, equipment, tools, supplies, transportation, incidentals, and any miscellaneous items necessary to fulfill the requirements of the pay item in accordance with the Plans, the Specifications, and other items of the Contract.

4. Sub-section 606.6 Payment (paragraph 3) -

Disregard this paragraph unless the Contract includes a specific pay item for trailer-mounted changeable message signs.

H. TEMPORARY PAVEMENT MARKINGS (SUB-SECTION 609.4.1) –

1. Sub-section 609.4.1.1.1 Application Requirements General (in addition to paragraph 3) -

On two-lane two-way roadways, apply and place temporary or permanent pavement markings, as specified hereupon, prior to the end of each day's work or shift or reopening a closed travel lane to traffic. These pavement markings shall include 4-inch wide solid lines on edge lines and solid center lines and 4-inch wide by 10 feet long broken lines with a 30-foot gap for broken center lines and lane lines unless otherwise specified. The center line pavement markings shall be either double yellow solid lines, yellow broken lines or an appropriate combination of a yellow solid line and yellow broken lines for passing / no passing zones. Placement of a singular yellow solid line for a center line pavement marking is unacceptable. The edge line pavement markings shall be a white solid line.

On multilane primary and secondary roadways, apply and place temporary or permanent pavement markings, as specified hereupon, to the travel lanes prior to reopening a closed travel lane to traffic. These pavement markings shall include 4-inch wide solid lines, utilized for edge lines and solid center lines, and 4-inch wide by 10 feet long broken lines with a 30-foot gap, utilized for lane lines and turn lanes, unless otherwise specified. The center line pavement markings shall be either double yellow solid lines or an appropriate combination of a yellow solid line and 4-inch wide by 10 feet long yellow broken lines for two-way left turn median areas. The right edge line pavement markings shall be a white solid line and the left edge line shall be a yellow solid line except in areas where the travel lanes separate to create a gore type situation and then the color schemes shall comply with SCDOT application practices for gore areas. The lane lines between travel lanes and turn lanes shall be 4-inch wide by 10 feet long white broken lines with a 30-foot gap.

However, on two-lane two-way and multilane primary and secondary roadways, application of a 4-inch wide solid line utilized for an edge line adjacent to an earth shoulder, white or yellow, may be delayed up to 72 hours after eradication of the original line when the length of eradicated line at a single location is no longer than 250 feet. In the event of multiple locations along the same line, each location must be separated from the adjacent location by no less than 250 feet with a cumulative total distance of eradicated line of no more than 1300 feet within any continuous 1 (one) mile length of roadway measured from a selected location. If the length of eradicated line exceeds 250 feet at any single location, the distance interval between multiple adjacent locations is less than 250 feet or a cumulative total distance of multiple locations of eradicated line exceeds 1300 feet within any continuous 1 (one) mile length of roadway measured from a selected location, replace the eradicated line(s) prior to reopening the adjacent travel lane to traffic.

On interstate roadways, apply and place temporary or permanent pavement markings, as specified hereupon, to the travel lanes prior to reopening a closed travel lane to traffic. These pavement markings shall include 6-inch wide solid lines, utilized for edge lines, and 6-inch wide by 10 feet long white broken lines with a 30-foot gap, utilized for lane lines between travel lanes and auxiliary lanes, unless otherwise specified. The right edge line pavement markings shall be a white solid line and the left edge line shall be a yellow solid line except in areas where the travel lanes separate to create a gore type situation and then the color schemes shall comply with SCDOT application practices for gore areas.

On all roadways, apply and place white stop bars and white triangle yield bars in all locations where previous stop bars and triangle yield bars have been eradicated by the work. Apply and place white stop bars and white triangle yield bars at intersections controlled by stop and yield signs within 72 hours of the eradication of the original pavement marking. Apply and place white stop bars at signalized intersections controlled by traffic control signals and at railroad crossings prior to reopening a closed travel lane to traffic.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Within the limits of existing turn lanes on all roadways, apply and place white arrows in all locations where previous arrows have been eradicated by the work unless otherwise directed by the RCE. Apply and place white arrows within 72 hours of the eradication of the original pavement markings. However, in regard to newly constructed turn lanes, apply and place white arrows the within turn lanes as directed by the RCE.

Within the limits of existing lane-drop sites on all roadways, apply and place white arrows in all locations where previous arrows have been eradicated by the work prior to the end of each day’s work or shift or reopening the closed travel lane to traffic. In regard to newly constructed lane-drop sites, apply and place white arrows within the travel lane to be terminated prior to opening the travel lane to traffic and as directed by the RCE.

2. Sub-section 609.4.1.1.1 Application Requirements General (Revision to paragraph 8) -

On two-lane, two-way roadways, passing zones may be eliminated within the work zone through application of 4-inch double yellow centerline pavement markings if determined feasible and directed to do so by the Plans and/or the RCE. Apply no passing zone markings as specified by the Plans, the Specifications, the *MUTCD* and the RCE.

I. FLAGGING OPERATIONS (SUB-SECTION 610.4.1) –

1. Sub-section 610.4.1.1 Flagging Operations (paragraph 1) -

Use a flagging operation to control the flow of traffic when two opposing directions of traffic must share a common travel lane. A flagging operation may be necessary during a lane closure on a two-lane two-way roadway, an intermittent ramp closure or an intermittent encroachment of equipment onto a portion of the roadway. Utilize flagging operations to direct traffic around work activities and maintain continuous traffic flow at reduced speeds when determined to be appropriate by the RCE. As stated above, flagging operations shall direct traffic around the work activities and maintain continuous traffic flow; therefore, stopped traffic shall not be required to stop for time durations greater than those listed below unless otherwise directed by the RCE. Begin measurement of the time interval immediately upon the moment the Flagger rotates the Stop/Slow paddle to display the “Stop” condition to the approaching motorists.

LENGTH OF CLOSURE	MAXIMUM TIME DURATION FOR STOPPED TRAFFIC
1 MILE or LESS	5 Minutes
1 to 2 MILES	7 ½ Minutes

If the work activities require traffic to be stopped for periods greater than 5 to 7 ½ minutes as stated above, consider alternate work methods, conducting work activities during times of lowest traffic volumes such as during the hours of darkness or complete road closure with detour installation.

J. PAVING AND RESURFACING (SUB-SECTION 611.4.1) –

1. Sub-section 611.4.1.2 Requirements (paragraph 8) -

Whenever travel lanes with acceptable grade elevation differences are open to traffic, provide “Uneven Lanes” signs (W8-11-48) or “Uneven Pavement” signs (W8-11A-48). Reflectorize

these signs with a fluorescent orange colored prismatic retroreflective sheeting unless otherwise specified. Install these signs adjacent to roadways with uneven pavement surfaces between travel lanes or between travel lanes and the adjacent paved shoulders. Install these signs at intervals no greater than 2600 feet.

(55) SECTION 601: PENALTY FOR VIOLATING LANE CLOSURE RESTRICTIONS:

The Contractor is advised that the Lane Closure Restrictions outlined in the Traffic Design Criteria will be strictly enforced. Should lane closures remain in place or not be completely removed by the time specified in the Traffic Design Criteria, a penalty will be assessed at the rate of \$1500.00 (fifteen hundred Dollars) for each 1/4 hour interval (or any portion thereof) for each lane closed. Should lane closures remain in place or not be completely removed for a period of longer than one hour beyond the time specified by the Traffic Design Criteria the penalty will increase to \$3000.00 (three thousand Dollars) for each 1/4 hour interval (or any portion thereof) for each lane closed. The penalty also applies to any ramp closures specified in the Traffic Design Criteria.

(56) SECTION 605: PERMANENT CONSTRUCTION SIGNS:

Utility locations must be performed prior to the placement of Permanent Construction Signs. State Law requires that the location of each sign be marked with a white line in the roadway or a stake in the shoulder. The locator company will mark 25 feet on either side of the location. The responsibility for marking the sign locations prior to the contractor calling PUPS for utility locate lies with the party responsible for lines and grades on the project. If Construction Lines and Grades is a pay item, then the Prime Contractor is responsible for marking the sign location. If this is not included, it is the Department's responsibility to mark the locations.

Prior to marking the sign location, care must be taken when marking the signs to ensure that there are no obstructions or other mitigating factors that will cause the sign to be moved outside of the 50 foot utility window. Any costs associated with staking out the sign locations are considered incidental to the cost of Permanent Construction Signs.

Requests for utility locates must be specific and isolated to the sign locations if no ground disturbing activities are occurring outside of the sign placement.

(57) SECTION 610: WORK ZONE TRAFFIC CONTROL PROCEDURES:

The first sentence of Section 610.3 of the 2007 Standard Specifications is hereby revised to:

“Ensure that background color of personal protective apparel is either fluorescent Yellow-Green or fluorescent Orange-Red, and meets ANSI Standard 107-2004 National Standard for High Visibility Apparel Class 2 (or Class 3 as necessary) Performance Criteria, or latest edition.”

Note #12 of Standard Drawing 610-005-00 is hereby revised to:

“During nighttime flagging operations, flaggers shall wear a Safety Vest and Safety Pants meeting ANSI Standard 107-2004 National Standard for High Visibility Apparel Class 3 Performance Criteria, or Latest Edition, and a Hardhat. The color of the apparel background material shall be either fluorescent Yellow-Green or fluorescent Orange-Red.”

(58) SECTION 653: RETROREFLECTIVE SIGN POST PANELS:

Section 653 is hereby modified as follows:

A. 653.2 MATERIALS

Add the following paragraph:

Use retroreflective sign post panels constructed of a nonmetallic composite or 3mm aluminum composite material approved by the SCDOT covered with a 3-inch wide type III sheeting. Use

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

sheeting that meets the requirements of Section 651.2.3. Use approved panels included on the Approved Products List For Traffic Control Devices in Work Zones.

B. 653.4.2 ERECTION

Add the following paragraph:

Mount the panel for the full length of the post from the sign to within 6 inches above the edge of the roadway. Mount panel only on post specified in the plans or special provisions. Secure the panel to the post with a minimum of 3 5/16-inch bolts and a lock washer and flat washer between post and nut, or tamper-resistant and rust-resistant screws. Use bolts, washers and nuts meeting the requirements of section 651.2.2. Provide the sheeting in the color that matches the background color of the sign except that the color for the “Yield” and “Do Not Enter” signs shall be red. Install panels to both posts, if there are two posts supporting the sign.

C. 653.5 MEASUREMENT

Replace with the following:

653.5 Measurement

The quantity for the pay item U-Section Post for Sign Support – (2 or 3)P, U-Section Post for Sign Bracing –2P or retroreflective sign post panel is the length of U-section post used for sign support or bracing or panel and is measured to the nearest 1/100 of a linear foot (LF) of the required post or panel, complete and accepted.

D. 653.6 PAYMENT

Replace with the following:

653.6 Payment

Payment for the accepted quantity for U-Section Post for Sign Support – (2or 3)P, U-Section Post for Sign Bracing –2P or Retroreflective Sign Post Panel, measured in accordance with Subsection 653.5, is determined using the contract unit bid price for the applicable pay item, and the payment includes all direct and indirect cost and expenses necessary to complete the work.

Payment is full compensation for fabricating and erecting U-section posts or braces or panels as specified or directed and includes providing mounting hardware; removing and disposing of existing signs supports, braces, and mounting hardware removed or replaced; replacing or relocating supports or braces shown on the Plans or directed by the RCE; and all other materials, labor, equipment, tools, supplies, transportation, and incidentals necessary to fulfill the requirements of the pay item in accordance with the Plans, the Specifications, and other terms of the Contract.

Pay items under this section include the following:

Item No.	Pay Item	Unit
6531205	U-SECTION POST FOR SIGN SUPPORTS – 2P	LF
6531210	U-SECTION POST FOR SIGN SUPPORTS – 3P	LF
6531215	U-SECTION POST FOR SIGN BRACING – 2P	LF
6531500	REFLECTIVE SIGN POST PANELS	LF

(59) DIVISION 700: ANTI-GRAFFITI COATING:

October 4, 2019

A. GENERAL

The anti-graffiti coating system shall be applied to locations as described in Exhibit 4 and in accordance with this Specification. Anti-graffiti coatings intended for use under this Specification shall be of a composition capable of preventing the adhesion of and facilitating the removal of

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

acrylic, polyurethane, and alkyd spray paint. Use a clear, non-sacrificial anti-graffiti coating for all applications.

B. MATERIALS

All anti-graffiti coatings must possess the physical and handling characteristics that are compatible with the requirements of this Specification. Anti-graffiti coating shall be manufactured by one of the approved manufacturers listed on the most recent Qualified Product List 7, titled “Qualified Spray-On/Brush-On Surface Coatings for Concrete Finish”. Contractor shall ensure that the anti-graffiti coating is compatible with the selected applied Finish Coating, if applicable.

Anti-graffiti coatings shall contain less than 5.0 lb/gal volatile organic compounds (VOC) as defined by 40 CFR Part 59, Subpart D. The manufacturer shall supply the following additional information:

1. Technical data sheet that includes installation instructions and graffiti removal instructions by pressure washing with water.
2. Certification that non-sacrificial anti-graffiti coating shall not blister, crack, check, chalk, delaminate, or exhibit a color change of more than 8 dE94 (or dE76) CIELAB units for a period of one year after installation.

Additionally, submit a certification that the coating meets the following laboratory performance requirements:

Additional Laboratory Performance and Tests		
Test	Method	Limits
Graffiti Resistance	ASTM D 6578; Use identified marking materials; initial and re-cleanability; and after exposure initial and re-cleanability	Cleanability Level 8, 9, or 10.
Fluid Resistance	ASTM D 1308; Paint thinner, gasoline	No blistering, discoloration, softening, or adhesion loss

C. APPLICATION

Apply an anti-graffiti coating or coating system in accordance with manufacturer’s product data sheet and as specified herein, when the ambient temperature is between 40° and 90°F, and the surface temperature is between 50° and 85°F and rising.

Ensure all concrete has cured a minimum of 30 days before applying anti-graffiti coating. Do not apply coating when precipitation is expected within 12 hours of the completion of application or the relative humidity exceeds that specified by the manufacturer.

D. PROTECTION OF ADJACENT SURFACES

Consider wind direction, velocity and geographic location as having a major impact on all cleaning and anti-graffiti coating operations. Use all necessary precautions to prevent cleaning and anti-graffiti coating materials from being dispersed outside the work site. If conditions are such that material is dispersed to areas where vehicles or other property may be damaged, suspend operations until conditions improve and work can continue without affecting adjacent property.

Protect all surfaces not intended to be coated, which are adjacent to, or in close proximity to the surfaces to be coated, during the application of anti-graffiti coating. Clean surfaces that are to be coated, as per the manufacturer’s product data sheet.

E. SURFACE PREPERATION

Prior to applying any anti-graffiti coatings, prepare all surfaces to be coated in accordance with ASTM D 4261 or ASTM D 4258 and the manufacturer’s product data sheet. When the anti-graffiti coating or coating system is to be applied over an existing coating, apply a test patch (minimum area of 4 square feet) in accordance with this Specification. Allow the test patch to cure a minimum of 7 days without any defects. No time extension will be granted as a result of this test requirement.

F. BASE COAT

Apply the base coat, if part of the system, as specified by the manufacturer. Unless otherwise specified by the manufacturer, ensure the cured base coat has a minimum dry film thickness of 4.0-8.0 mils.

G. FINISH COAT

When applicable, ensure the base coat surface is clean and cured to a dry hard state according to the manufacturer's instructions before applying the finish coat. Mix finish coat and apply in accordance with the manufacturer's instructions. Ensure the cured finish coat of the two coat system has a minimum dry film thickness of 2.5-5.0 mils. Apply as many coats as necessary to provide a finish coat which is a uniform continuous film over the entire surface, free of pinholes, runs, sags, or any other deficiencies. Finish coat shall be considered "non-sacrificial".

H. CORRECTION OF DEFICIENCIES

Remove all applied anti-graffiti coatings identified by the Engineer as damaged, defective, or otherwise not meeting these Specifications, in accordance with the manufacturer's recommendations. Prepare the surface and reapply the coating in accordance with the manufacturer's recommendations and as specified herein, at no additional cost to the Department.

I. REMOVAL OF GRAFFITI BEFORE ACCEPTANCE

Remove all graffiti from areas receiving anti-graffiti coating, at no additional cost to the Department. Ensure all federal, state, and local environmental regulations are met when removing graffiti. Removal shall be in accordance with manufacturer's recommendations.

(60) SECTION 700: NOISE BARRIER WALLS:

July 26, 2018

Design, furnish, and construct noise barrier walls in accordance with the requirements of Exhibit 4 and this Specification.

A. GENERAL

Secure joints and connections in such a manner as to be structurally sufficient with no visible openings for sound transmission and as to not be a secondary source of sound transmission due to vibration.

Conform top of walls to the elevation shown and construct walls to conform to the horizontal alignments, corners and offsets shown in the plans. Provide all drainage related items in order to control the buildup of moisture from storm water runoff. Follow the design requirements for the type, gradation, and method of placement of backfill required. Exercise due caution in placing backfill at noise barrier wall foundation so as to maintain proper wall alignment.

B. PRECAST CONCRETE PANELS

Precast concrete panels shall conform to the following requirements:

1. Cast all precast panels in a precasting facility approved by the Materials and Research Engineer.
2. Prior to construction of complete noise barrier, provide a full scale sample representative of the panels to be used, and showing the architectural finish pattern on at least the median height of the noise barrier for approval by the CM for Mega Projects. Coordinate with the CM for Mega Projects if the sample panels will be reviewed on site or at the precast facility. After approval, Sample panels may be used in the permanent structure as long as they are fabricated with the same structural details as the permanent noise barrier.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

3. Fabricate wall panels using an fractured fin finish (Standard Drawing 701-950-01) on the interstate side and a raked finish on the back side. On the interstate side of the top panel, provide a broom finish on the top two feet of the panel to provide the appearance of a concrete coping. Fabricate posts using smooth or brushed finish.
4. Acceptability of the panels will be determined from the compressive strength of cylinders made and cured in the same manner as the panels, and by inspection during the manufacturing process. The manufacturer of the panels shall furnish such facilities and assistance as may be required to carry out the sampling and daily testing in an expeditious and satisfactory manner.
5. Cast panels on a steel surface with steel side forms prepared so that there is no damage to panel finish. Do not strip forms until a minimum concrete strength of 2400 psi is attained. Vertical forms are required to provide the surface relief specified on each side of the panel.
6. Place concrete in each panel without interruption, and consolidate by the use of vibrators supplemented by hand tamping and rodding so as to force the concrete into the corners of the forms and eliminate stone pockets, cleavage planes, and air bubbles.
7. Repair minor honeycombing and voids within 24 hours of the removal of forms.
8. Cure the panels as specified in SCDOT Standard Specification Subsection 702.4.4 for a sufficient length of time so that the concrete will develop the specified compressive strength. Do not use a curing period less than 72 hours under normal summer temperature conditions. In colder weather extend the curing period, as directed by the RCE, to provide equivalent curing. Protect the curing panels from freezing and evaporation from the time the concrete is placed until curing is complete. As an alternate to the wet cure method, steam cure the panels as specified in Section 704.
9. On each panel, include the date cast and the Inspector's approval stamp. Acceptance by the Inspector at the precast yard will not preclude rejection at the erection point if any damage or defects are discovered.
10. Erect the panels in accordance with plan details and dimensions.
11. After erection is complete and before final acceptance of the project, clean the noise barrier to remove any dirt or stain in an environmentally safe procedure.
12. Panels will be subject to rejection due to failure to meet any of the requirements specified above. In addition, any of the following defects will be cause for rejection:
 - f. Defects that indicate imperfect mixing and casting.
 - g. Honeycomb or open texture.
 - h. Exposure of the reinforcement.
 - i. Failure to meet the specified concrete compressive strength at 28 days.
13. For items damaged during shipment or installation, repair/replace procedure shall be approved by the RCE.
14. Handle and ship panels in as close to vertical position as possible as directed by the manufacturer to prevent damage to the finish.

C. TEST WALL

Erect a portion of the wall as directed by the RCE (not less than 50 feet in length) which will be used for testing and acceptance. The RCE will use this portion of the wall to determine if the Contractor's methods and equipment are sufficient to produce a noise barrier wall that meets the requirements of the contract documents including sound reduction performance, appearance, and texture. The Contractor may revise his methods and equipment as necessary in order to satisfactorily meet all contract requirements. If this portion of wall does not meet the requirements of the contract documents, remove and dispose of any rejected portions at no expense to the Department.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

D. TOLERANCES

Limit vertical deviation from plumb for walls and posts to: ½ inch for wall heights less than 10 feet; 1 inch for wall heights 10 feet to 20 feet; and 1 ½ inches for wall heights greater than 20 feet.

Limit horizontal tolerance for walls to prevent panels from slipping out of the post joints.

Set posts within ½ inch of their intended location. For noise barrier walls that are built on top of earth berms, construct the berms of earthwork fill material and compacted to ninety-five percent (95%) of the maximum density as determined by AASHTO T 99.

(61) SECTION 701: SAND LIGHTWEIGHT CONCRETE:

Use sand lightweight concrete, where specified in the plans, complying with the requirements of this Special Provision.

Sand lightweight concrete is composed of portland cement, fine aggregate, lightweight coarse aggregate, water, and admixtures. Provide sand lightweight concrete that complies with the applicable requirements of Section 701 of the Standard Specifications and the additional requirements herein.

At least 35 days prior to the proposed use, submit for approval a mix design from a testing laboratory accredited by the AASHTO Accreditation Program. Provide a mix that obtains a 28-day design compressive strength equal to or greater than 4000 psi and satisfies the following design criteria:

TEST	TEST METHOD	REQUIREMENT
Max. Unit Weight, plastic, lbs/ft ³	AASHTO T 121	120
Max. Unit Weight, dry, lbs/ft ³	ASTM C567 using equilibrium (air dried) unit weight	115
Min. Relative Dynamic Modulus, (percent)	AASHTO T 161 Procedure A	80

When submitting the mix design, include the source of the aggregates, cement, and admixtures and the gradation, specific gravity, and fineness modulus (fine aggregate only) of the aggregates. Submit test results showing the mix design conforms to the criteria, including the 28 day compressive strength of a minimum of six cylinders. Provide a mix design that produces an average compressive strength sufficient to ensure that a minimum strength of 4000 psi is achieved in the field.

Produce an additional mix in accordance with AASHTO M 195 to determine the drying shrinkage. The maximum drying shrinkage for this mix is 0.07%.

For lightweight coarse aggregate, use expanded shale or slate that meets the requirements of AASHTO M 195. Provide lightweight coarse aggregate that meets the gradation table below.

GRADATION OF LIGHTWEIGHT CONCRETE AGGREGATE	
Sieve Size	Passing Square Opening Sieves (Percent by Weight)
1"	100
3/4"	90-100
3/8"	10-50
No. 4	0-15

Determine the soundness in accordance with AASHTO T 104. Loss of more than 10% of the lightweight aggregate in five cycles of the accelerated soundness test using sodium sulfate is not permitted.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Ensure the lightweight aggregate will have a wear of not more than 40% when tested in accordance with AASHTO T 96.

Ensure that lightweight aggregate has an absorbed moisture content equal to the 24 hours absorption as determined by AASHTO T 84 or T 85 when it is proportioned and incorporated into the mix. Consult with the lightweight aggregate supplier regarding minimum absorption required for proper performance of aggregate in concrete mixtures.

Have a representative from the manufacturer of the lightweight aggregate attend and participate in the Pre-pour Conference and also provide technical assistance in the production of the lightweight concrete at the batch plant and/or site for the first day of lightweight concrete mixing and placement operations.

Do not use AASHTO T 152 to determine the air content. Determine air content in accordance with AASHTO T 196.

Determine the plastic density (unit weight) of lightweight concrete in accordance with AASHTO T 121. Perform density tests for acceptance of lightweight concrete after final corrections for entrained air and slump have been made. When a density test is made and the results of the test exceed the specified maximum, perform a check test immediately from the same load of concrete. If the average of the 2 test results exceeds the specified maximum density, the load is rejected.

The quantity for Sand Lightweight Concrete is the volume of specified concrete within the neat lines of the structure as shown on the Plans or as revised by the RCE and is measured by the cubic yard (CY) of concrete, complete, and accepted. Deductions are made for the volume of embedded items, except for reinforcing steel; however, no deduction is made for edge chamfers of $\frac{3}{4}$ inch or smaller.

(62) SECTION 701: NON-CONFORMING CONCRETE:

For purposes of applying the reduced payment and below strength provisions of Subsection 701.2.12.4 of the Standard Specifications, a unit price of \$885 dollars per cubic yard will be used for normal weight concrete and a unit price of \$900 dollars per cubic yard will be used for sand lightweight concrete.

(63) SECTION 702: MASS CONCRETE PLACEMENT

Delete Subsection 702.4.3.5 of the Standard Specifications in its entirety and replace it with the following:

Use procedures for mass concrete placement for a pour that has dimensions of 5 feet or greater in 3 different directions. In the case of a circular cross-section, a mass concrete placement is defined as a pour that has a diameter of 6 feet or greater and a length of 5 feet or greater. Mass concrete requirements do not apply to Foundation Seals (Class 4000S).

For all mass concrete pours, do not allow the maximum temperature during curing to exceed the temperatures listed below:

- For concrete mixes where the total cementitious materials consist of at least 25% Class F fly ash, 35% Class C fly ash, or 35% water granulated blast furnace slag, the maximum temperature during curing shall not exceed 180°F.
- For all other concrete mixes, the maximum temperature during curing shall not exceed 160°F.

For all mass concrete pours, do not allow the mix temperature to exceed 80°F measured at discharge into the forms or shaft. With exception of drilled shafts, maintain a temperature differential of 35°F or less between the interior and exterior of all mass pour elements during curing. Temperature differential management is not required for drilled shafts.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Before placing mass concrete, submit to the Construction Manager for Mega Projects for review and acceptance a Mass Concrete Placement Plan containing, but not limited to, the following:

Analysis of the anticipated thermal developments within mass pour placements using the proposed materials and casting methods,

Temperature Control Plan outlining specific measures to control the maximum temperature and differential within the limits noted above, and

Details of the proposed monitoring system. Include proposed monitoring interval not to temperature measurements taken hourly.

Submit for review by the OMR all special concrete mix designs, which are part of the Temperature Control Plan. Do not use High-early-strength (ASTM C150 Type III or ASTM C1157 HE) cement in mass concrete.

Provide temperature monitoring devices to ensure the requirements of this specification are met. Provide the RCE with a copy of each set of readings as they are taken and a temperature chart for each mass pour element showing temperature readings vs. time.

For drilled shafts, temperature monitoring will require the placement of devices at the location of maximum heat. As the insulating properties of air, water (if present), and soil strata adjacent to the shafts will vary with depth, capturing the location of maximum heat is expected to require measurement at multiple depths. Coordinate the placement of temperature monitoring devices with shaft reinforcing and CSL access tubes provided in accordance with Section 727 of the Standard Specifications. Do not provide additional access tubes around the perimeter of the reinforcing cage that will reduce reinforcing clearances. Do not use monitoring equipment cast into shafts that will interfere with CSL testing. Continue monitoring temperatures in drilled shafts for a minimum of 36 hours after the maximum temperature is measured.

For all other mass concrete elements, record temperature development between the location of maximum heat and exterior of the element at points accepted by the Construction Manager for Mega Projects and closely monitor the mass pour maximum temperature and temperature differential. Generally, use one monitoring point in the center of the largest mass of concrete and a second point approximately 2 inches inside the face nearest to the first monitoring point. Continue monitoring temperature until the interior temperature is within 35°F of the lowest ambient temperature or a maximum of two weeks.

If the monitoring indicates that the proposed measures are not controlling the concrete temperatures as specified herein, provide to the Construction Manager for Mega Projects an engineering assessment of the short and long-term impacts associated with the non-conformance. All costs associated with inspection, testing, and evaluation of the non-conformance are the sole responsibility of the contractor. Additionally, make the necessary revisions to the Temperature Control Plan and submit the revised plan for review.

The Contractor assumes all risks connected with placing a mass pour of concrete. Construction Manager for Mega Projects review of the Contractor's Mass Concrete Placement Plan will in no way relieve the Contractor of the responsibility for obtaining satisfactory results. Should any mass concrete placed under this specification prove unsatisfactory, make the necessary repairs or remove and replace the material at no expense to the Department.

Provide the control of temperatures in mass concrete pours in addition to any other requirements found on the Plans and/or in the Special Provisions that apply to the work in question. Include all costs associated with temperature controls for mass concrete placement in the unit cost of the concrete.

(64) SECTION 704: PRESTRESSED CORED SLABS:

Subsection 704.4.6 of the Standard Specifications is amended as follows:

- A. Delete Paragraph 2 of Subsection 704.4.6.2 and replace it with the following:
"Provide holes and recesses at locations indicated in the Shop Plans for insertion of the 1¼ -inch diameter transverse tie rods."
- B. Delete the last sentence of Subsection 704.4.6.4 and replace it with the following:
"Make certain of the correct alignment of the holes for the transverse tie rods."
- C. Delete Subsection 704.4.6.5 and replace it with the following:
704.4.6.5 Transverse Tie Rods

In each span, place 1¼-inch diameter transverse tie rods and tighten to a snug fit. After the 1¼-inch diameter transverse tie rods have been tightened in a span and before any equipment, material or barrier parapet is placed on the span, fill the shear keys, dowel holes, and tie rod recesses with the non-shrink grout as indicated on the Plans and allow curing for a minimum of 3 days. To prevent leakage of grout, place foam backer rod or other material acceptable to the RCE along the bottom of the joint between adjacent slab units. Ensure that the grout reaches a compressive strength of 5000 psi in 24 hours. Properly remove any foreign substance/materials including grease from the exposed portions of transverse tie rods before grouting the recesses.

With the approval of the RCE, material and equipment may be placed on the cored slab spans after the transverse tie rods have been tightened, the grout in shear keys has cured for 3 days minimum, and the grout has reached a compressive strength of 5000 psi."

(65) SECTION 709: POT BEARINGS:

A. GENERAL

This item shall consist of furnishing, fabrication and installation of pot bearings in accordance with AASHTO LRFD Bridge Design Specifications, the Standard Specifications, the manufacturer's recommendations and details shown on plans and as specified herein.

Fixed pot bearings consist of a sole plate, anchor bolt assemblies, a disc of elastomeric in a steel cylinder with a snug fitting steel piston and masonry plate. Guided pot bearings consist of a sole plate, anchor bolt assemblies, a top steel plate with a polished stainless steel sheet facing, bearing on a fixed pot bearing with a layer of virgin TFE polytetrafluoroethylene material on its' top, masonry plate, anchor bolt assembly which includes anchor bolts, nuts, washers, pipe sleeves, a closure plate, grout and various sizes of standard pipe and any other necessary material as detailed on the plans.

B. MATERIALS

All pot bearings shall be manufactured by the same manufacturer.

All steel in the pot bearings shall be AASHTO M270 Grade 50. The plates in the pot bearing assemblies, except for the areas with special facings shall be cleaned, coated, and sealed in accordance with Special Provision for "Thermal Sprayed Coatings (Metallization)". Metallization of the internal surfaces of the pot is permitted provided these surfaces are then polished to a surface smoother than 63 micro inches root mean square. Coat surfaces to a thickness of 6 mils minimum on all external parts. Repair surfaces that are abraded or damaged after the application of metallization in accordance with the Special Provision for "Thermal Sprayed Coatings (Metallization)".

Fill plate, when specified on the plans, shall be galvanized.

When the maximum plan dimension of the sheet is 12" or less, provide a stainless steel sheet in guided pot bearings that is at least 16 gage or 1/16". When the maximum plan dimension is greater

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

than 12" provide a stainless steel sheet that is at least 11 gage or 1/8". Ensure that all stainless steel sheets are in conformance with ASTM A240/A167 Type 304 and polished to a minimum #8 mirror surface finish.

Blast clean the surface of the plate that will be attached to the stainless sheet to a near white condition in accordance with the Standard Specifications. Position and clamp the back of the stainless sheet that is to be in contact with the steel plate on the steel plate. Apply the stainless steel to the blast cleaned surface of the steel plate as soon as possible after blasting and before any visible oxidation of the blast cleaned surface occurs. Weld the stainless sheet continuously around its perimeter using a tungsten inert gas, wire-fed welder.

For the PTFE sheet, used as a mating surface for the stainless sheet, provide an unfilled virgin PTFE Sheet (Recessed) or a glass-fiber filled PTFE sheet, resulting from skiving billets formed under hydraulic pressure and heat. Provide resin that conforms to the requirements of ASTM D4894 or D4895.

To bond the PTFE and the piston, use heat cured high temperature epoxy capable of withstanding temperature of -320°F to 500°F.

Provide a neoprene elastomer with a durometer hardness of 50 that allows for a minimum rotation of 0.02 radians. Place a 1/64" thick unfilled PTFE disc on either side of the neoprene inside the bearing. Use other material if the Engineer approves. Use a brass sealing ring with the neoprene elastomer.

C. DESIGN

Pot bearings shall be designed by the manufacturer for the loads and movements shown on the contract drawings. However, use the anchor bolt size, length, spacing and masonry plate thickness as shown on the contract plans. The contractor shall adjust the bridge seat, cap and top of column elevations if the bearing assembly depth varies from the assumed depth shown on the contract plans. Plans for any adjustments shall be submitted to the Department for approval 30 days before constructing the columns.

Either combine, cast as a single piece, or weld together the sole plate and top plate/piston and the cylinder with the masonry plate.

In the design of the bearings, the following allowable bearing stresses shall be used:

On confined elastomeric: 3500 psi

On PTFE Sliding Surface

Filled or unfilled PTFE (recessed): 3500 psi

The Contractor shall submit shop drawings in accordance of Standard Specifications Section 725 and one set of design calculations for the Engineer's approval. The shop drawings and design calculations shall be checked and sealed by a South Carolina Registered Professional Engineer.

D. SAMPLING AND TESTING

1. Sampling

The manufacturer shall select, at random, sample bearings from completed lots of bearings for testing by the manufacturer. The manufacturer shall provide certification that the completed bearings and their components have been tested and are in compliance with the requirements of this Special Provision. The results of the manufacturer's tests shall be furnished to the Research and Materials Engineer.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

2. Testing

a. Proof Load Test

A test bearing shall be loaded to 150% of the bearing's rated design capacity and simultaneously subjected to a rotational range of 0.02 radians (1.146°) for a period of one hour.

The bearing will be visually examined both during the test and upon disassembly after the test. Any resultant visual defects, such-as extruded or deformed elastomer or PTFE, damaged seals or rings, or cracked steel, shall be cause for rejection of the lot.

During the test, the steel bearing plate and steel piston shall maintain continuous and uniform contact for the duration of the test. Any observed lift-off will be cause for rejection of the lot.

b. Sliding Coefficient of Friction

For all guided and fixed expansion type bearings, the sliding coefficient of friction shall be measured at the bearing's design capacity in accordance with the test method described below, and on the fifth and fiftieth cycles, at a sliding speed of 1 inch per minute.

The sliding coefficient of friction shall be calculated as the horizontal load required to maintain continuous sliding of one bearing, divided by the bearing's vertical design capacity.

The test results will be evaluated as follows:

- 1) The measured sliding coefficients of friction shall not exceed the lessor of the design value stated in the plans or 3 percent.
- 2) The bearings will be visually examined both during and after the test. Any resultant visual defects, such as bond failure, physical destruction, cold flow of PTFE to the point of debonding, or damaged components, shall be cause for rejection of the lot.

Bearings not damaged during testing may be used in the work.

The test method and equipment shall include the following requirements:

- 1) The test must be arranged so that the coefficient of friction on the first movement of the manufactured bearing can be determined.
- 2) The bearing surface shall be cleaned prior to testing.
- 3) The test shall be conducted at maximum working stress for the PTFE surface with the test load applied continuously for 12 hours prior to measuring friction.
- 4) The first movement static and dynamic coefficient of friction of the test bearing shall be determined at a sliding speed of less than 1 inch per minute and shall not exceed:

.04	unfilled	PTFE
.08	filled	PTFE
- 5) The bearing specimen shall then be subjected to 100 movements of at least 1 inch of relative movement and, if the test facility permits, the full design movement at a speed of less than 1 foot per minute. Following this test the static and kinetic coefficient of friction shall be determined again and shall not exceed the values measured in (d). The bearing or specimen shall show no appreciable sign of bond failure or other defects.

Bearings represented by test specimens passing the above requirements will be approved for use in the structure subject to on-site inspection for visible defects.

E. INSTALLATION

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Prior to shipment, seal the joint between the steel piston and the steel cylinder with a bead of caulk. Store pot bearings delivered to the bridge site under cover on a platform above the ground surface. Protect the bearings from injury at all times and, before placing the bearings, dry and clean all dirt, oil, grease or other foreign substances from the bearing. Do not disassemble the bearings during installation, except at the manufacturer's direction. Place the bearings in accordance with the recommendations of the manufacturer, Contract Drawings, and as directed by the Engineer. If there is any discrepancy between the recommendations of the manufacturer, Special Provisions, and Contract Drawings, the Engineer is the sole judge in reconciling any such discrepancy.

Preformed bearing pads shall be provided under the masonry plates and shall conform to the following:

Preformed bearing pads shall be composed of multiple layers of 8 ounce per square yard cotton duck impregnated and bound with high quality natural rubber, or equally suitable materials approved by the Engineer, which have been compressed into pads of uniform thickness. The thickness of the preformed bearing pads shall be 3/16" with a tolerance of $\pm 1/16$ ". Cotton duck shall meet the requirements of Military Specification MIL-C882-D for 8 ounce per square yard cotton army duck or equivalent. The number of pads shall be such as to produce the required thickness after compressing and vulcanizing. The finished pads shall withstand compressive loads perpendicular to the plane of the laminations of not less than 10,000 psi without detrimental extrusion or reduction in thickness.

The Contractor shall furnish certification stating the preformed bearing pads meet the requirements stated above.

No bearing shall be installed before it is approved by the Engineer.

(66) SECTION 709: THERMAL SPRAYED COATINGS (METALLIZATION)

A. GENERAL

A thermal sprayed coating and sealer shall be applied to metal surfaces as specified herein when called for on the plans or by other Special Provisions, or when otherwise approved by the Engineer. See the "Pot Bearings" Special Provision for bearing surfaces requiring metallization.

B. MATERIALS

Wire material shall be zinc, or 85/15 zinc/aluminum alloy as certified by the manufacturer. The size of wire material shall be in accordance with the manufacturer's recommendations for the Flame, or Arc Sprayed method. Powder material shall not be used. The SSPC-CS 23.00(I) Specification governs anything not addressed in this Special Provision.

The seal coating shall be a vinyl wash primer meeting the requirements of SSPC paint 27 or an approved equal.

C. CONSTRUCTION

Blast clean surfaces to be metallized with a grit or sand abrasive in accordance with Steel Structures Painting Council SSPC SP-10 to impart a surface profile of 2 - 4 mils. If flash rusting occurs prior to metallizing, blast clean the metal surface again. Grind flame cut edges to remove the carbonized surface prior to blasting. Bevel all flame cut edges to an approximate 1/16" chamfer. Coat the surfaces within 8 hours after blasting. Apply the thermal sprayed coating only when the surface temperature of the steel is at least 10°F above the dew point. Preheat if required.

Conduct a bend test in accordance with 6.5 of SSPC-CS 23.00(I) at the beginning of each work period or shift. Any debonding or delamination of the coating that exposes the substrate requires corrective action, additional testing, and the Engineer's approval before resuming the metallizing process.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Surfaces shall be metallized to a thickness called for on the plans or Special Provisions for the bridge component to which the coating is applied.

The seal coating shall be applied to metallized surfaces within 8 hours and in accordance with the manufacturer's recommendations.

The Contractor shall not weld items to the metallized surface unless specifically permitted by the Engineer.

Metallized surfaces that are damaged prior to shipment shall be cleaned and coated as described above. Metallized surfaces damaged after shipment shall be repaired. Excessive damage to metallized surfaces as determined by the Engineer shall be cause for rejection at no expense to the Department.

The Contractor shall provide the Engineer with certification for all materials and documentation which indicates that the applicator has performed successful thermal spray operations within the last 12 months.

(67) SECTION 711: PILE AND DRIVING EQUIPMENT DATA FORM:

Pile and Driving Equipment Data Form is located in the Standard Forms on the SCDOT Design-Build website at <http://www.scdot.org/business/design-build.aspx>.

(68) SECTION 711: GALVANIZED STEEL H PILING AND SWAY BRACES:

March 16, 1999

A. GENERAL

This Supplemental Specification covers the cleaning, hot dip shop galvanizing, field cleaning and field repair of galvanizing for new Steel H Bearing Piling and Steel Sway Bracing where required and detailed in the plans.

B. SURFACE PREPARATION

The coating applicator shall pre-clean the material to be galvanized in accordance with accepted methods to produce an acceptable surface for hot dip galvanizing.

C. SHOP GALVANIZING

Hot dip galvanizing of iron and structural steel shapes shall be produced utilizing lead free technology. Steel H Bearing Piling and Steel Sway Braces shall be hot dip galvanized in accordance with the latest ASTM A 123 Specification to provide a uniform minimum coating thickness of 3.5 mils (89 μ m). Shop repair of coatings not meeting the above minimum thickness requirements will not be allowed.

Galvanizing practices and procedures shall protect against possible embrittlement of the steel as described in ASTM A143.

Inspection and testing of hot dip galvanized coatings shall be done under the requirements of ASTM A 123.

The coating applicator shall have available for inspection a quality assurance manual and shall submit an original and two copies of the coating applicator's notarized Certificate of Compliance that the hot dip galvanized coating meets or exceeds the specified requirements of ASTM A 123 as modified by this Specification.

Galvanized members shall be stored, protected, handled and loaded in accordance with industry standards to protect the coating.

D. SHOP INSPECTION

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Inspection of galvanizing practices and procedures will be performed by the Department's Research and Materials Laboratory. As soon as the project has been awarded, the Contractor shall notify the Research and Materials Laboratory at (803) 737-6698, P. O. Box 191, Columbia, South Carolina 29202. The Contractor shall provide the name and address of the coating applicator so that the inspection arrangements can be made.

E. FIELD REPAIR OF GALVANIZING

Field repair of galvanized coatings may be used to repair damaged areas, weld areas at pile splices, weld areas at sway braces to piles or other areas of coating damage. All field repairs shall be made in accordance with ASTM A 780. The Engineer shall be the sole judge of damaged areas that require field repair of the galvanized coating.

When galvanized members are to be field welded the Contractor shall clean the area at the weld location for a distance sufficient to provide an area free of coating for the weld metal to be deposited. The Contractor's cleaning method shall be pre-approved by the Engineer and cleaned areas shall be inspected and approved prior to field welding.

F. METHOD OF MEASUREMENT

The galvanizing of Steel H Bearing Piling and Sway Braces will not be measured for payment. All cost for galvanizing shall be included in the price bid for the item galvanized.

G. BASIS OF PAYMENT

All costs for labor, materials, equipment, tools and other incidentals required to galvanize the Steel H Bearing Piling and Sway Braces shall be included in the price bid for those items. No separate payment will be made for galvanizing.

(69) SECTION 712: DRILLED SHAFT FORMS:

Drilled Shaft Forms are included on the Construction Extranet.

(70) SECTION 713: MECHANICALLY STABILIZED EARTH (MSE) WALLS:

Delete Subsection 7.8.3 of the Supplemental Technical Specification SC-M-713 Mechanically Stabilized Earth (MSE) Walls and replace it with the following:

Compact and densify stone backfill material with a minimum of 4 passes with a smooth heavy roller (approximately 15 tons). Compaction testing will not be required for stone backfill materials meeting the requirements of Table 3. Do not use sheepsfoot or grid-type rollers for compacting backfill within the reinforced backfill. Stone backfill meeting the requirements of Table 2 shall be compacted in accordance with Subsection 7.8.2.

(71) SECTION 714: SMOOTH WALL PIPE:

NOTE: Reinforced Concrete Pipe shall be utilized on I-26 and I-126 Mainline and Ramps where installations are required under the roadway and median. Reference SCDOT Supplemental Technical Specification SC-M-714

A. DESCRIPTION

When bid items for smooth wall pipe are listed in the EBS file and/or proposal, the SCDOT will allow the use of reinforced concrete pipe, spiral ribbed aluminum pipe or high density polyethylene pipe in accordance with the specifications found in SC-M-714 (latest edition), the Standard Drawings, and this Special Provision. The plans may indicate reinforced concrete pipe only and are hereby superseded by this Special Provision.

B. MATERIALS

Smooth wall pipe is either Reinforced Concrete Pipe (RCP: 714-205-XX), Spiral Ribbed Aluminum Pipe (SRAP: 714-605-XX), or High Density Polyethylene pipe (HDPE: 714-705-XX) as described in SCDOT Supplemental Technical Specification SC-M-714 and in the SCDOT Standard

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Drawings. Use smooth wall pipe culvert from manufacturers listed on Qualified Product Lists 30, 68, or 69. No value engineering application is required in order to use alternate pipe.

For the following counties: Berkeley, Beaufort, Charleston, Colleton, Dorchester, Georgetown, Horry, and Jasper, provide pipe joints meeting AASHTO M 315 for RCP or passing the 13 psi pressure test as indicated on the QPL for SRAP or HDPE. Take care to properly lubricate and equalize pipe gaskets as indicated in the **SCDOT Standard Drawings** and **SC-M-714** to prevent gaskets from “rolling” during installation. For all other counties, provide pipe joints meeting AASHTO M 198, M 315, or passing the minimum 10 psi pressure test unless specific pipe joints are indicated in the plans or special provisions.

No other pipe type will be accepted as an alternate.

C. CONSTRUCTION REQUIREMENTS

Use only pipe that conforms to the minimum and maximum fill height limitations indicated on the appropriate standard drawing. Unless indicated otherwise in the plans, determine pipe fill height based on the following formula:

Fill Height = Elevation (top of curb or max grade above pipe) – Elevation (pipe crown)

For all locations where new pipe is being attached to an existing system, use one of the following options:

1. Any existing pipe may be extended using any acceptable alternate pipe type by using a drainage structure at the interface between the different pipe types. The drainage structure* may consist of standard junction boxes, manholes, catch basins, drop inlets, or circular drainage structures detailed on SCDOT Standard Drawings. For larger diameter pipe, custom drainage structures may be required. Field cut existing pipe to remove damaged joint (if applicable) and install new drainage structure at the field cut interface. Always fully clean existing pipe and pipe joints before installing joint sealant or gaskets and attaching new pipe.
2. For locations where existing pipe properties cannot be directly matched, use a custom designed interface* (concrete collar, proprietary mastic wrap, custom coupling band, etc.) appropriate to interface the existing pipe to the new pipe of the same type. Submit interface drawings and design for review by the Engineer of Record and the Design Standards Engineer. Always fully clean existing pipe and pipe joints before installing joint sealant or gaskets and attaching new pipe. Replace existing pipe that has joint damage before connecting new pipe to the system.
3. Any existing pipe may be extended using new pipe with the same joint profile and wall properties of the existing pipe. Always fully clean existing pipe and pipe joints before installing joint sealant or gaskets and attaching new pipe. Verify* the following parameters before ordering new pipe:
 - a. For RCP to RCP, confirm wall thickness, joint profile shape, and compatibility with existing manufacturer's pipe. Replace existing pipe that has joint damage before connecting new pipe to the system.
 - b. For SRAP to SRAP, replace existing pipe that has joint damage before connecting new pipe to the system.
 - c. For HDPE to HDPE, confirm the manufacturer of the existing pipe and the joint compatibility with the new pipe. Provide a new gasket when connecting to existing spigot end of HDPE pipe. Replace existing pipe that has joint damage before connecting new pipe to the system.
 - d. For CAAP to CAAP, confirm the type and size of end corrugations of the pipe. When existing pipe has full helical corrugations, provide new connecting pipe with one end fully helical and fully helical coupling band. When end corrugation size does not match the corrugation size shown on SCDOT Standard Drawings, provide a drainage structure

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

(described above) at the interface. Replace existing pipe that has joint damage before connecting new pipe to the system. Do not install CAAP as smooth wall pipe; however, use these requirements when plans specify installing new CAAP.

The RCE will verify that connections between existing pipe and new installed pipe have been handled with one of the options listed above. Repair or replace all existing to new joint interfaces that do not meet the requirements above at no additional cost to SCDOT.

In all installations, provide the RCE with a complete pipe table indicating the following: Plan Pay Item, Plan Pipe Description, Plan Quantity, Installed Pipe (diameter, type, class/gage), Installed Quantity, and description of interface used to join new pipe to existing pipe for each occurrence.

In cases where 2 or more different pipe types are installed, provide a copy of the proposed installation layout on the drainage/plan sheets to the RCE indicating which pipe is installed at each location.

D. MEASUREMENT

Measure smooth wall pipe in accordance with methods specified in SC-M-714 for the pipe material installed.

*No measurement will be made for drainage structure, designed interface, or field verification performed at each interface between existing pipe and new pipe unless drainage structure/interface is specified in the plans.

E. PAYMENT

Payment will be made for smooth wall pipe regardless of the type of material installed. Payment for smooth wall pipe is as specified in SC-M-714 for the pipe material installed.

*Include all costs for work related to connecting new pipe to existing pipe in the unit bid price of the new pipe. This connection work includes: drainage structure at the interface, custom designed interface, field verification of existing pipe and compatibility with new pipe, new gaskets, new joint sealant, new coupling bands, removal, and disposal of damaged sections of existing pipe.

ITEM NO.	DESCRIPTION	UNIT

7144XXX	SMOOTH WALL PIPE INCR.- X" TO X"	EA

(72) SECTION 714: PIPE END TREATMENTS (2/5/2010):

A. REFERENCE

SCDOT Supplemental Technical Specification SC-M-714

B. DESCRIPTION

For exposed pipe culvert ends, provide an end treatment in accordance with this special provision.

C. MATERIALS

Rigid pipe culvert is Reinforced Concrete Pipe (RCP: 714-205-00). Flexible pipe culvert is either Spiral Ribbed Aluminum Pipe (SRAP: 714-610-00), High Density Polyethylene pipe (HDPE: 714-705-00), or Corrugated Aluminum Alloy Pipe (CAAP: 714-605-00).

Use minimum Class B riprap for pipe up to 84" diameter. Use minimum Class C riprap for pipe 84" diameter or larger.

Use minimum Class 4000 concrete (4000P for precast).

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Use ASTM A-706 grade 60, low-alloy steel deformed rebar.

Use minimum AASHTO M-196 Alclad 3004-H32 alloy aluminum.

Use Type M Mortar Grout unless specified otherwise.

D. CONSTRUCTION REQUIREMENTS

Use one of the following end treatments as specified in the plans or special provisions:

For all exposed crossline pipe ends, when an end treatment is not specified in the plans, use **Pipe Riprap Protection** (804-3xx-xx). For flexible pipe larger than 24" diameter, install pipe straight headwall, pipe end structure, flared end section, or wingwall section in addition to riprap. For all exposed driveway pipe ends where no end treatment is specified in the plans, use **Pipe Riprap Protection** (804-3xx-xx) unless directed otherwise by the engineer.

Use **Beveling of Pipe End** (719-610-00) when specified in the plans or special provisions. Beveled ends may only be used on flexible pipe up to 24" diameter and on rigid pipe up to 60" diameter. When beveling of pipe ends is specified on flexible pipe larger than 24" diameter, install pipe straight headwall, pipe end structure, flared end section, or wingwall section. Use factory fabricated beveled ends for all pipe types unless approved by the Engineer.

Use **Pipe Straight Headwall** (719-605-00) when specified in the plans or special provisions. Use straight headwall only in locations where pipe exposed end does not face the direction of traffic.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Use **Pipe End Structure** (719-615-00) when specified in the plans or special provisions. Use pipe end structure in locations where pipe exposed end faces the direction of traffic. Pipe end structures may be used in other locations if approved by the RCE.

Use **Pipe Flared End Section** when specified in the plans or special provisions.

Use **Pipe Wingwall Section** when specified in the plans or special provisions.

Completely seal interface between pipe and end treatment with grout. If bricks or shims are used to place pipe, take care to remove all air pockets and voids when grouting.

For systems not designed in the SCDOT Standard Drawings, provide shop drawings, installation procedure and design calculations for review by RCE. Design must include provision to control erosion around the structure and prevent the separation of the end treatment from the pipe system. Design must provide for a proper seal at all construction joints including the interface between the pipe and the structure. Design must be self-supporting and not induce any additional loads on the pipe. Submit designs for consideration as new standard drawings to the Design Standards Engineer at the address listed in the SCDOT Standard Drawings book.

E. MEASUREMENT

Measure pipe in accordance with SC-M-714

Measure end treatments in accordance with Standard Specifications, Standard Drawings, or Special Provisions

F. PAYMENT

Beveling of pipe ends will be in addition to the standard pipe pay item. Payment for the item Beveling of Pipe Ends includes all labor required to factory (or field, if approved) fabricate a bevel on one end of pipe.

Pipe culvert and end treatments, measured as provided in SC-M-714 Subsection x.4, are paid for at the contract unit price for the respective items, which price and payment is compensation for furnishing all material, labor, equipment, tools including hauling and placing all pipe sections and materials, excavation of the entire standard trench, bedding, and pipe backfill as described in the measurement section (both structural and embankment backfill in this region), removal of existing pipe to be replaced, constructing pipe joints, removal of old end treatments, cleaning out pipe, disposal of surplus materials, all visual inspection, and all incidentals necessary to complete the work.

Add the following paragraph to SC-M-714 subsections x.5:

Payment for riprap and geotextile for erosion control under riprap as measured in subsection x.4 includes all direct and indirect costs and expenses necessary to complete the work.

(73) SECTION 714: TRENCHLESS PIPE INSTALLATION

A. DESCRIPTION

This work consists of installing a reinforced concrete carrier pipe FOR STORM WATER CONVEYANCE inside a steel casing pipe in the locations designated in the plans or as specified by the Engineer. This procedure enables the installation of reinforced concrete pipes underground without the use of open-cut excavation.

The Contractor is responsible for the design, adequacy, and methodology of the pipe jacking installation. The methods and details shown on the Drawings and specified herein are intended to indicate the minimum acceptable standard of quality required for pipe installation.

B. MATERIALS

1. Casing Pipe

The Contractor shall install a steel pipe into place to serve as the casing pipe. The Contractor is responsible for the structural design of the casing pipe based on site conditions, installation methodology, and performance requirements. Ensure that the casing pipe has a ½ inch minimum wall thickness. Do not use the steel casing pipe as the carrier pipe.

2. Carrier Pipe

Ensure the carrier pipe is a reinforced concrete pipe conforming to the current version of Supplemental Technical Specification SC-M-714. Ensure the carrier pipe meets the minimum requirements of a Class V reinforced concrete pipe and is of the size specified in the plans.

3. Grout

Provide an excavatable flowable fill grout mixture with sufficient water added to produce a flowable mixture that can be delivered at a sufficient pressure to fill any voids outside the casing pipe and to fill in the annular spaces between the casing and the carrier pipes. Furnish and operate suitable equipment for any required grouting operations depending on the condition of the application.

4. Lubrication Material

An accepted lubricant may be used during the pipe jacking installation to lower the friction developed on the surface of the pipe. Submit the lubricating systems and materials to the

Engineer for review and acceptance before use. Ensure the lubricant is intended for use in this application.

5. Automated Spoil Transportation System

Provide an automated spoil transportation system capable of any adjustments required to maintain face stability for the particular soil condition to be encountered on a project. Ensure the system continuously monitors and balances the ground water pressure. If the soil has excessive ground water, submit an earth pressure balance system for review by the Engineer before use.

C. SUBMITTALS

Submit Shop Drawings, Temporary Shoring Plans, Material Certifications, Design Calculations, and other information as specified for all materials in this Section in accordance with the requirement for Submittals in these specifications. Ensure Shop Drawings also include complete erection, installation, and adjustment instructions and recommendations. Ensure all submittals requiring structural design are signed and sealed by a Professional Engineer registered to practice engineering in the State of South Carolina.

Allow a minimum of 20 working days for the review of the submittal by the Engineer. Obtain acceptance of the submittal prior to ordering pipe materials and the start of any excavation or jacking operations. Additional review time may be needed for installation methods not covered in this special provision. Submit the following items for review and acceptance by the Engineer:

1. Manufacturers' data sheets and specifications describing in detail the jacking system to be used and similar projects on which this system has been successfully used.
2. Maximum anticipated jacking loads and supporting calculations signed and sealed by an engineer registered in the State of South Carolina.
3. Calculations for the design of the casing pipe signed and sealed by an engineer registered in the State of South Carolina.
4. Certification by the manufacturer that the pipe materials conform to the requirements of the Specifications and Plans.
5. Casing pipe dimensions to accommodate the carrier pipe size indicated on the plans.
6. Shaft dimensions, locations, surface construction, profile, depth, and method of excavation.
7. Description of method(s) to control and dispose of ground water, spoil, temporary shoring, and other materials encountered in the maintenance and construction of pits and shafts.
8. Layout and design of all shoring, bracing, and thrust block systems, including calculations, signed and sealed by an engineer registered in the State of South Carolina.
9. Description of flowable fill grouting methods, manufacturer's data, mix designs, and specifications for grouting equipment.
10. A description of the grade and alignment control system used for the tunneling equipment.
11. Description of lubrication system and materials to be employed during installation of the reinforced concrete pipe.
12. Layout plans and descriptions of the construction sequence.
13. A detailed plan for monitoring ground surface movement (settlement or heave) due to the tunneling operation. Ensure the plan addresses the method and frequency of survey measurements.
14. Contingency plans for acceptance for the following potential conditions: damage to pipeline structural integrity; misalignment; and ground surface movement.

15. Method of support and guidance of the carrier pipe.

D. CONSTRUCTION

1. Excavations

Ensure all excavations and pits are well sheeted and braced as necessary for safe and adequate access for workmen, inspections, and materials and are of a size suitable to equipment and material handling requirements. Delineate the perimeter of all pits with orange flagging, fencing or other safety devices to notify nearby workers and construction vehicles of the hazardous work area.

Ensure all of the Contractor's plans, specifications, and design computations for pit shoring are signed and sealed by a Professional Engineer registered in the State of South Carolina. Ensure all pits required for the installation of the pipe are located within SCDOT right-of-way and are completely isolated from the roadway traffic with precast concrete barriers installed when necessary in accordance with the Standard Drawings.

2. Dewatering

Perform all dewatering as required for the completion of the work. Submit all proposed procedures for dewatering to the Engineer for review prior to any earthwork operations. Dispose of all water removed by dewatering operations in accordance with applicable South Carolina Department of Health and Environmental Control regulations.

Ensure the dewatering system is of sufficient size and capacity as required to control groundwater or seepage to permit proper excavation and tunneling operations. Drawdown groundwater to at least the bottom of excavations at all times in order to maintain a dry and undisturbed condition.

Ensure control, by acceptable means, of all water regardless of source. Ensure the entire periphery of the excavation areas are ditched and diked to prevent water from entering the excavation where applicable. The Contractor is fully responsible for disposal of the water and providing all necessary means at no additional expense to the Owner. The Contractor is solely responsible for proper design, installation, operation, maintenance, and failure of any component of the system.

The Contractor is responsible for and will repair without cost to the Owner, any damage to work in place and the excavation, including damage to the bottom due to heave and including removal of material and pumping out of the excavated area. The Contractor is also responsible for damages to any other area or structure caused by his failure to maintain and operate the dewatering system proposed and installed.

Take all the steps necessary to become familiarized with the surface and subsurface site conditions. Obtain the data that is required to analyze the water and soil environment at the site to assure that the materials used for the dewatering systems will not erode, deteriorate, or clog to the extent that the dewatering systems will not perform properly during the period of dewatering.

If, in the course of construction, it may be necessary to block a ditch, pipe or other drainage facility, install temporary pipes, ditches or other drainage facilities to maintain adequate drainage, as accepted by the Engineer. Upon completion of the work, remove the temporary facilities and restore the permanent facilities.

3. Surface Settlement Monitoring

Before beginning the jacking operations, establish a settlement monitoring system that has been accepted by the Engineer. Measure the ground movement of all structures, roadways, parking lots, and any other areas of concern within 25 feet on both sides of all tunneling

pipelines at a maximum spacing of 10 feet along the pipeline route, or as required by the Engineer.

If any settlement or construction damage occurs to pavements, structures, facilities, appurtenances and/or lands, discontinue jacking and submit a revised installation plan for review and acceptance prior to resuming work. Restoration to original conditions or better shall be undertaken and completed as directed by, and to the satisfaction of, the Engineer at the Contractor's expense.

4. Casing Pipe Installation

The Contractor is allowed to use any one of the following excavation methods for the pipe jacking operation:

- a. Full Face Tunnel Boring Machine (TBM)
- b. Open Hand Shield
- c. Earth Pressure Balance Machine (EPBM)
- d. Backacter Shield
- e. Cutter Boom Shield
- f. Air Pressure Shield
- g. Microtunneling

Note: The cutter boom shield method is only applicable in dry ground conditions. The air pressure shield method is only applicable in wet ground conditions. The Contractor is not allowed to use a slurry-boring machine for excavation.

Ensure the excavation method used for installing the jacked pipe is of such size and capacity that it will allow tunneling to proceed in a safe and expeditious manner. Ensure the installation of the casing pipe and the tunnel excavation is done as rapidly as possible to prevent voids, cave-ins, or settlement, and avoid damage to any nearby structures.

Install a steel pipe, serving as the casing pipe, with jacks of sufficient capacity to shove the pipe through the resisting material into position true to required line and grade. Utilize an automated spoil transportation system to ensure the excavation rate matches the rate of spoil removal thereby maintaining settlement or heave within tolerances specified in the contract documents. Continuously monitor and control the pressure of delivery of any lubrication materials to prevent pipe buckling or ground heave. Ensure the lubrication material is used in accordance with the manufacturers' specifications. Check the vertical and horizontal alignment of the casing pipe by survey instrument at least once during each four feet of advance, or as directed by the Engineer.

Delays between jacking operations may result in soil settling around the jacked pipe, thus making it difficult and sometimes impossible to resume movement. If conditions arise making it impossible to further jack the pipes without damage, construct the balance of the pipe installation with methods accepted by the Engineer.

When jacking is complete, pressure-inject the accepted flowable fill grout mixture into any annular space created around the casing pipe in excess of 3/4 inch. Ensure the pressure-injected grout completely fills the voids outside the limits of the excavation. Ensure grouting operation does not damage adjacent utilities or other properties. Inject the grout at a pressure that does not distort or imperil any portion of the work or existing installations or structures.

5. Cradle Installation

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Following the completion of the casing pipe installation, furnish pipe cradles, spiders, or guides within the casing for the purposes of guiding and supporting the installation of the carrier pipe. Indicate the methods of support and guidance in the submittal to the Engineer. Ensure the method proposed provides adequate support of the pipe throughout the installation and ensures that the carrier pipe is installed at the line and grade indicated in the Plans.

6. Carrier Pipe Installation

Install the reinforced concrete carrier pipe inside the casing pipe with adequately designed and spaced pipe alignment guides. Bell up the carrier pipe outside of the casing and push the carrier pipe through the casing. Protect the concrete pipe from damage during delivery, staging and installation. Fill the annular space created between the casing and the carrier pipe with the accepted flowable fill grout mixture.

(74) SECTION 719: CAST IN PLACE CONCRETE PIPE COLLAR:

A. DESCRIPTION

A cast in place concrete pipe collar is used to provide a permanent connection between two pipe culverts of the same diameter but different joint profiles. Pipe collars can be used between two pipe of the same material or different material. Use only pipe that conforms to SC-M-714, Permanent Pipe Culverts.

B. MATERIAL

Use minimum class 4000 concrete.

Use reinforcement steel conforming to ASTM A706 Grade 60.

See SCDOT Standard Drawings or Project Plans for other material requirements and design details.

C. CONSTRUCTION REQUIREMENTS - GENERAL

Follow SCDOT Standard Drawings 719-705-xx for minimum dimensions and details. Use geotextile wrap on joint to minimize concrete intrusion into the joint during the forming and curing process.

D. MEASUREMENT

Measure concrete pipe collars by each location where pipe diameter of different joint profiles are to be connected. Include in measurement all materials and work to complete the pipe collar as shown in the Standard Drawings or plans.

E. PAYMENT

Payment will be made for each location.

ITEM NO.	DESCRIPTION	UNIT
7197051	CONCRETE COLLAR FOR UP TO 12" PIPE	EA
7197052	CONCRETE COLLAR FOR UP TO 24" PIPE	EA
7197053	CONCRETE COLLAR FOR UP TO 36" PIPE	EA
7197054	CONCRETE COLLAR FOR UP TO 48" PIPE	EA
7197055	CONCRETE COLLAR FOR UP TO 60" PIPE	EA
7197056	CONCRETE COLLAR FOR UP TO 72" PIPE	EA

(75) SECTION 724: ELASTOMERIC BEARINGS:

724.4.4 Installation. Paragraph 4 was revised as follows:

Exercise caution where field weld or shop weld is made while elastomeric bearing pad is in contact with the metal. Do not expose the elastomer or elastomer bond to instantaneous temperatures greater

than 400°F or any temperature limit set by the fabricator whichever is lower. Any damage to the elastomeric bearing due to welding is cause for rejection. Monitor temperature by use of heat crayons.

(76) SECTION 727: CROSSHOLE SONIC LOGGING OF DRILLED SHAFT FOUNDATIONS:

Crosshole Sonic Logging (CSL) Testing is required for all drilled shafts. SCDOT shall be responsible for all CSL Testing.

(77) SECTION 805: RESETTING GUARDRAIL:

Existing steel beam guardrail that is determined to be in acceptable condition by the Construction Manager for Mega Projects, using the below criteria, may be reset in conformance with Section 805.4.3 of the 2007 SCDOT Standard Specifications, and adjusted to the current PREMASH Standard Drawings. The Contractor shall inspect all guardrail on the project and notify the Construction Manager for Mega Projects in writing of any guardrail that will be permanently reset. Provide this notice to the Construction Manager for Mega Projects a minimum of two weeks prior to permanently resetting any guardrail on the project. If existing wood posts are planned to be reset, all existing wood posts shall be replaced with steel posts.

Resetting Guardrail Acceptance Criteria:

- A. Any guardrail components that are bent, flattened, torn, deformed, exhibit signs of rust, or damaged in any way shall not be reset.
- B. Guardrail with obsolete components and guardrail systems that are not on the SCDOT Qualified Products List (QPL) shall not be reset.
- C. Section 805.4.3 disallows resetting guardrail posts. This shall only apply to existing wood posts.

(78) SECTION 805: NON-MOW STRIP UNDER GUARDRAIL:

May 7, 2018

Section 805 is expanded as follows:

A. GENERAL

Provide non-mow strip under guardrail as shown in the plans, in accordance with plan details, standard drawings 805-525-01 & 805-525-02, and these special provisions. Non-mow strips under guardrail shall only be placed where shown in the plans, specified in the RFP or as directed by the Engineer.

B. CONSTRUCTION

Place non-mow strips under guardrail where indicated on the plans, specified in the RFP or as directed by the Engineer. Refer to details provided in this special provision and standard drawings for typical limits of non-mow strip and requirements for leave out areas around guardrail posts.

Provide non-mow strip between the edge of pavement and the face of the guardrail when that distance is less than 20 feet.

Extend non-mow strip under guardrail to bridge end at locations where concrete approach slabs are used.

When at least one opening between parallel lines of guardrail is less than 20 feet wide, provide non-mow strip the entire area between the lines of guardrail.

When openings between parallel lines of guardrail are more than 20 feet wide, but obstructions such as bridge columns reduce the access between the guardrail and the obstruction to less than

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

20 feet and/or the distance between any two obstructions is less than 20 feet then provide non-mow strip for the area with any single point of access less than 20 feet wide.

When areas around obstructions have non-mow strips, no area should remain uncovered that will sustain plant life.

The top of non-mow strips shall be constructed to be flush with surrounding earth shoulders, slopes and finished pavement grade.

Damage to non-mow strips during subsequent construction, especially during driving of guardrail posts, should be minimized. Any damaged non-mow strip must be restored to its original line and grade to the satisfaction of the Engineer.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

 ASPHALT, CONCRETE, OR PROPRIETARY NON-MOW STRIP

(79) SECTION 806: REPAIR EXISTING CONTROL OF ACCESS FENCE:

Repair, replace or reset any damaged control of access fencing or fence components within the project limits, as directed by the RCE. Remove and dispose of existing fences, trees, brush, stumps, logs,

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

weeds, or other debris that interfere with the construction of the fence. CONTRACTOR's bid shall include 1000 linear feet of Repair of Existing Control of Access Fence. Should the actual length of fence rehabilitation vary from this estimated value by more than 25%, a Contract Change Request will be generated by the RCE to adjust the contract value based on the actual rehabilitated length of fence as measured by SCDOT inspectors, utilizing a unit price of **\$15.00/LF**, regardless of fence type. Ensure all waste materials and debris generated during this work is disposed of promptly and at appropriate waste facilities.

(80) SECTION 806: TEMPORARY BARRIER FENCE FOR ENVIRONMENTAL BOUNDARY:

See attached Supplemental Specification dated May 1, 2013.

The Contractor is hereby advised that all Jurisdictional Waters (i.e. streams & wetlands) that are adjacent to or within the construction limits shall be protected with a double row of Silt Fence or other means of double perimeter control as approved by RCE.

(81) SECTION 809: RIGHT OF WAY PLAT:

A. DESCRIPTION

The contractor by the "Substantial Work Complete" date shall prepare a right of way plat signed and sealed by a Professional Land Surveyor (PLS) licensed to practice in the state of South Carolina. The right of way plat shall be in accordance with the requirements of Section 49-460-A "General Property Survey" as outlined in the South Carolina "Standards of Practice Manual" for land surveyors. A copy of the plat will be recorded, by the contractor, in the Register Mesne Conveyance (RMC) office of the county or counties in which the project resides. The contractor will provide one copy of the plat on a full sized plan sheet(s) (22" X 36") and submit to the resident construction engineer to be included in the as-built plans.

B. MATERIALS: REBAR CAP R/W MARKER

Materials used shall comply with those listed on SCDOT Standard Drawing No. 809-105-00.

C. CONSTRUCTION REQUIREMENT

The PLS shall set right of way markers along all new right of way lines as well as along any present right of way being retained by the Department at intervals listed on the SCDOT Standard Drawings. Right of way markers shall not be placed at points common to side property lines and/or corners. In the event that the plan reflects a break in the right of way along a side property line the right of way marker will not be set without the side property line being retraced and established by way of survey. The PLS shall prepare a plat documenting the location of all Right of Way Markers set and reflecting the as-built station and offset from the plan alignment. The plat shall show the entire project corridor as an enclosed strip or parcel of land to include the mainline and all side roads as defined on the project plan.

D. MEASUREMENT AND BASIS OF PAYMENT

The item Right of Way Plat is paid on a lump sum (LS) basis; and therefore, there is no specific measurement for this item. The unit price bid for Property Right of Way Plat shall include all costs for labor, materials, equipment, services of a PLS and any related fees or costs associated with producing a plat, recording the plat at the RMC office, and all required copies. Each marker placed in accordance with the Standard Drawings complete and accepted will be measured and paid at the unit price bid.

Bid Item Number	Description	Unit
8091010	RIGHT OF WAY MARKER (REBAR AND CAP)	EA
8091000	RIGHT OF WAY MARKER (REINFORCED CONCRETE)	EA
8091050	RIGHT OF WAY PLAT	LS

(82) SECTION 815: ANIONIC POLYACRYLAMIDE FOR EROSION CONTROL:

A. DESCRIPTION

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

This work consists of applying a product containing anionic polyacrylamide to disturbed land areas as a means of controlling erosion. The work also consists of the use of solid form anionic polyacrylamide as a means of sediment control.

B. MATERIALS

The product to be used is to be specific to the area to be treated. Product selection and application rate is to be determined by a testing laboratory acceptable to SCDOT. Preliminary site-specific assessment (soil and water testing) by a qualified manufacturer must be conducted to select media, additives, application rate, application method and maintenance procedure tailored to site-specific soil characteristics, topography, hydrology, and the type of erosion targeted. A copy of the test results is to be provided to the Engineer.

Anionic polyacrylamide, in pure form, shall have less than or equal to 0.05% acrylamide monomer by weight, as established by the Food and Drug Administration and the Environmental Protection Agency. The maximum application rate of polyacrylamide, in pure form, shall not exceed 200 pounds/acre/year, or 10 pounds/acre per single application event.

The polyacrylamide shall have a charge density of 10% to 55%, by weight. The polyacrylamide shall have a molecular weight of 6 to 24 Mg/mole.

The polyacrylamide and polyacrylamide mixtures shall be noncombustible.

Cationic forms of polyacrylamide are not allowed for use due to their high level of toxicity.

Polyacrylamide shall be non-toxic. A toxicity report is required to be submitted to the Engineer.

C. CONSTRUCTION REQUIREMENTS

Liquid and powder forms of polyacrylamide are to be either applied directly to the exposed soil surface or applied as a tackifier with temporary seeding to prevent detachment of soil particles during the establishment of vegetation.

In the solid form, the polymer is to be placed directly into the storm water runoff to enhance eroded particle settlement in a trapping device.

Polyacrylamide shall be mixed and/or applied in accordance with all Occupational Safety and Health Administration (OSHA) Material Safety Data Sheet (MSDS) requirements and the manufacturer's recommendations for the specified use conforming to all federal, state and local laws, rules and regulations. The Contractor is responsible for obtaining all required permits.

Emulsion batches shall be mixed following recommendations of a testing laboratory that determines the proper product and rate to meet site requirements.

Additives such as fertilizers, solubility promoters, or inhibitors, etc. to polyacrylamide shall be nontoxic.

Care is to be taken when using polyacrylamide adjacent to natural water bodies.

D. METHOD OF MEASUREMENT

The application of polyacrylamide for erosion control will be measured by the surface area treated at the recommended rate of application. Quantities are to be computed to the nearest MSY (Thousand Square Yards). Solid form anionic polyacrylamide is to be measured by weight in pounds, in place and accepted. The Contractor is required to provide, to the Engineer, invoices for all polyacrylamide products used on the project.

E. BASIS OF PAYMENT

The accepted quantity of "Anionic Polyacrylamide For Erosion Control" will be paid at the contract unit price, which price and payment shall be full compensation for all materials, labor, tools

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

equipment, and incidentals necessary to complete the work herein described in a workmanlike and acceptable manner. Solid form anionic polyacrylamide is to be paid for by the pound. Bid Item Numbers and Descriptions are as follows:

Bid Item Number	Description	Unit
8152020	ANIONIC POLYACRYLAMIDE FOR EROSION CONTROL	MSY
8152025	SOLID FORM ANIONIC POLYACRYLAMIDE	LBS

(83) SECTION 815: EROSION CONTROL MEASURES:

In addition to the erosion control measures specified in the Plans, Standard Specifications, Supplemental Technical Specifications and the Special Provisions, the CONTRACTOR is advised that all land disturbing activities (clearing and grubbing, excavation, borrow and fill) are subject to the requirements set forth in the following permits and regulations:

- A. South Carolina Code of Regulations 63-380, Standard Plan for Erosion, Sediment, and Stormwater Runoff Control.
- B. Erosion and Sediment Reduction Act of 1983 (Title 48, Chapter 18 of the South Carolina Code of Laws of 1983, as amended). Section 70 of this code authorized the South Carolina Department of Health and Environmental Control (SCDHEC) to administer this regulation with respect to lands under the jurisdiction of the South Carolina Department of Transportation.
- C. National Pollutant Discharge Elimination System (NPDES) General Permit Number SCR160000, effective January 1, 2013: The Environmental Protection Agency, in accordance with the Federal Clean Water Act, has granted to the South Carolina Department of Health and Environmental Control (SCDHEC) the authority to administer the Federal NPDES permit program in the State of South Carolina.

In accordance with the NPDES General Permit, the Contractor must sign a Contractor Certification. The Contractor shall refer to the Construction Extranet for the certification form. By signing this form, the Contractor acknowledges that upon award and execution of the Contract, he/she accepts/understands the terms and conditions of the *Storm Water Pollution Prevention Plan (SWPPP)* as required by the NPDES General Permit and may be legally accountable to SCDHEC for compliance with the terms and conditions of the *SWPPP*. In addition, the Contractor certifies that the NPDES certification statement status is made part of all its subcontracts.

The Contractor will complete and forward an updated SCDOT approved *Notice of Intent (NOI)* to the SCDOT Construction office to submit to SCDHEC. If the Coastal Zone Consistency (CZC) permit has not been approved it shall be forwarded by the Contractor to SCDOT to submit to SCDHEC as part of *NOI* package. If SCDHEC does not send a letter within 10 business days of receipt of the *NOI*, authorizing coverage, denying coverage, or advising that a review of the *CECP* will take place, coverage will be automatically granted.

Prepare and submit a *Contractor's Erosion Control Plan (CECP)* to the RCE before the pre-construction conference. Ensure that the plan meets the requirements of the NPDES General Permit. The plan will be reviewed and approved by the Department before commencing any land disturbing activities.

At the pre-construction conference, with contractors performing land-disturbing activities present, the *CECP* will be explained and discussed so that the Contractor is made aware of their responsibilities in the *CECP*.

Once approved, fully implement the *CECP*. Coordinate the prompt installation of erosion control devices with construction activities to maintain compliance with the above regulations and NPDES General Permit.

Conduct an Erosion and Sediment Control Inspection by an appointed Certified Erosion Prevention and Sediment Control Inspector (CEPSCI) from the Contractor and the Department at least every 7-calendar days. Both parties will acknowledge participation in the inspection by signing the inspection

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

report and include their inspector's CEPSCI number on the report. Correct deficiencies noted during these inspections within the assigned priority period. If deficiencies are not corrected within this timeframe, the RCE will stop all work (except erosion and sediment control measures) until the deficiencies are corrected.

Give special attention to critical areas within the project limits (i.e., running streams, water bodies, wetlands, etc.). In these areas, the RCE may direct the Contractor to undertake immediate corrective action, but in no case allow these deficiencies to remain unresolved more than 7 days or 48 hours in accordance with their assigned priority after being identified during the Erosion and Sediment Control Inspection.

Closely follow the grading operations with the seeding operations. Shape and prepare the slopes for seeding as the grading progresses. Unless the RCE grants prior written approval, limit the amount of surface area exposed by land disturbing activities to 750,000 square feet. Commence seeding operations within 7 days following completion of construction activities within an area.

Initiate stabilization measures within 7 days for an area where construction activities will be temporarily or permanently ceased for 14 days or longer.

Coordinate the installation of all other permanent erosion control items with the grading and seeding operations. These items include, but are not limited to, asphalt gutter and riprap. Construct gutter work before or promptly after the seeding is performed. Place riprap at the ends of pipe immediately after the pipe is laid and promptly install riprap ditch checks after ditch work has been performed.

Within existing right of way, clean and repair existing concrete paved ditches that will be retained. Within existing right of way, clean and repair existing asphalt paved ditches that are to be retained and overlay with 200 lbs/sy HMA Surface Course Type C or D. Stabilize new ditches in accordance with the *SCDOT Requirements for Hydraulic Design Studies* (May 26, 2009), the *SCDOT Water Quality Design Manual* (December 2014) and as needed for erosion control utilizing SCDHEC Best Management Practices (BMP's).

Failure to adequately comply with the provisions as detailed above or any other required erosion control measures will result in stoppage of all contract operations (except erosion and sediment control measures) until corrective action has been taken. Additional sanctions may be invoked by the SCDHEC in accordance with their authority.

Keep the following documents at the RCE's office from the start of construction until the site is finally stabilized:

- A. Copy of the *CECP*,
- B. Copies of Contractor Certification statements,
- C. Copy of the permit,
- D. Letter from DHEC authorizing permit coverage if provided by SCDHEC, and
- E. A marked-up set of site plans.

When uniform perennial vegetation achieves a cover density of 70%, submit a *Notice of Termination (NOT)* to SCDHEC to terminate coverage. Include a signed statement with the *NOT* certifying that all work on the site has been completed in accordance with the *SWPPP* and the NPDES General Permit for all sites one acre or greater.

Fines assessed on the Department by SCDHEC as the result of the CONTRACTOR's non-compliance or violation of said permit provisions will be paid by the Department and will subsequently be deducted from any monies due or that may become due to the CONTRACTOR. In case no monies are due or available, the fines incurred will be charged against the CONTRACTOR's Surety.

FHWA-1273 -- Revised May 1, 2012

REQUIRED CONTRACT PROVISIONS FEDERAL-AID CONSTRUCTION CONTRACTS

- I. General
- II. Nondiscrimination
- III. Nonsegregated Facilities
- IV. Davis-Bacon and Related Act Provisions
- V. Contract Work Hours and Safety Standards Act Provisions
- VI. Subletting or Assigning the Contract
- VII. Safety: Accident Prevention
- VIII. False Statements Concerning Highway Projects
- IX. Implementation of Clean Air Act and Federal Water Pollution Control Act
- X. Compliance with Governmentwide Suspension and Debarment Requirements
- XI. Certification Regarding Use of Contract Funds for Lobbying

ATTACHMENTS

- A. Employment and Materials Preference for Appalachian Development Highway System or Appalachian Local Access Road Contracts (included in Appalachian contracts only)

I. GENERAL

1. Form FHWA-1273 must be physically incorporated in each construction contract funded under Title 23 (excluding emergency contracts solely intended for debris removal). The contractor (or subcontractor) must insert this form in each subcontract and further require its inclusion in all lower tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services).

The applicable requirements of Form FHWA-1273 are incorporated by reference for work done under any purchase order, rental agreement or agreement for other services. The prime contractor shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Form FHWA-1273 must be included in all Federal-aid design-build contracts, in all subcontracts and in lower tier subcontracts (excluding subcontracts for design services, purchase orders, rental agreements and other agreements for supplies or services). The design-builder shall be responsible for compliance by any subcontractor, lower-tier subcontractor or service provider.

Contracting agencies may reference Form FHWA-1273 in bid proposal or request for proposal documents, however, the Form FHWA-1273 must be physically incorporated (not referenced) in all contracts, subcontracts and lower-tier subcontracts (excluding purchase orders, rental agreements and other agreements for supplies or services related to a construction contract).

2. Subject to the applicability criteria noted in the following sections, these contract provisions shall apply to all work performed on the contract by the contractor's own organization and with the assistance of workers under the contractor's immediate superintendence and to all work performed on the contract by piecework, station work, or by subcontract.

3. A breach of any of the stipulations contained in these Required Contract Provisions may be sufficient grounds for withholding of progress payments, withholding of final payment, termination of the contract, suspension / debarment or any other action determined to be appropriate by the contracting agency and FHWA.

4. Selection of Labor: During the performance of this contract, the contractor shall not use convict labor for any purpose within the limits of a construction project on a Federal-aid highway unless it is labor performed by convicts who are on parole, supervised release, or probation. The term Federal-aid highway does not include roadways functionally classified as local roads or rural minor collectors.

II. NONDISCRIMINATION

The provisions of this section related to 23 CFR Part 230 are applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more. The provisions of 23 CFR Part 230 are not applicable to material supply, engineering, or architectural service contracts.

In addition, the contractor and all subcontractors must comply with the following policies: Executive Order 11246, 41 CFR 60, 29 CFR 1625-1627, Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The contractor and all subcontractors must comply with: the requirements of the Equal Opportunity Clause in 41 CFR 60-1.4(b) and, for all construction contracts exceeding \$10,000, the Standard Federal Equal Employment Opportunity Construction Contract Specifications in 41 CFR 60-4.3.

Note: The U.S. Department of Labor has exclusive authority to determine compliance with Executive Order 11246 and the policies of the Secretary of Labor including 41 CFR 60, and 29 CFR 1625-1627. The contracting agency and the FHWA have the authority and the responsibility to ensure compliance with Title 23 USC Section 140, the Rehabilitation Act of 1973, as amended (29 USC 794), and Title VI of the Civil Rights Act of 1964, as amended, and related regulations including 49 CFR Parts 21, 26 and 27; and 23 CFR Parts 200, 230, and 633.

The following provision is adopted from 23 CFR 230, Appendix A, with appropriate revisions to conform to the U.S. Department of Labor (US DOL) and FHWA requirements.

1. Equal Employment Opportunity: Equal employment opportunity (EEO) requirements not to discriminate and to take affirmative action to assure equal opportunity as set forth under laws, executive orders, rules, regulations (28 CFR 35, 29 CFR 1630, 29 CFR 1625-1627, 41 CFR 60 and 49 CFR 27) and orders of the Secretary of Labor as modified by the provisions prescribed herein, and imposed pursuant to 23 U.S.C. 140 shall constitute the EEO and specific affirmative action standards for the contractor's project activities under this contract. The provisions of the

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.) set forth under 28 CFR 35 and 29 CFR 1630 are incorporated by reference in this contract. In the execution of this contract, the contractor agrees to comply with the following minimum specific requirement activities of EEO:

a. The contractor will work with the contracting agency and the Federal Government to ensure that it has made every good faith effort to provide equal opportunity with respect to all of its terms and conditions of employment and in their review of activities under the contract.

b. The contractor will accept as its operating policy the following statement:

"It is the policy of this Company to assure that applicants are employed, and that employees are treated during employment, without regard to their race, religion, sex, color, national origin, age or disability. Such action shall include: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship, pre-apprenticeship, and/or on-the-job training."

2. EEO Officer: The contractor will designate and make known to the contracting officers an EEO Officer who will have the responsibility for and must be capable of effectively administering and promoting an active EEO program and who must be assigned adequate authority and responsibility to do so.

3. Dissemination of Policy: All members of the contractor's staff who are authorized to hire, supervise, promote, and discharge employees, or who recommend such action, or who are substantially involved in such action, will be made fully cognizant of, and will implement, the contractor's EEO policy and contractual responsibilities to provide EEO in each grade and classification of employment. To ensure that the above agreement will be met, the following actions will be taken as a minimum:

a. Periodic meetings of supervisory and personnel office employees will be conducted before the start of work and then not less often than once every six months, at which time the contractor's EEO policy and its implementation will be reviewed and explained. The meetings will be conducted by the EEO Officer.

b. All new supervisory or personnel office employees will be given a thorough indoctrination by the EEO Officer, covering all major aspects of the contractor's EEO obligations within thirty days following their reporting for duty with the contractor.

c. All personnel who are engaged in direct recruitment for the project will be instructed by the EEO Officer in the contractor's procedures for locating and hiring minorities and women.

d. Notices and posters setting forth the contractor's EEO policy will be placed in areas readily accessible to employees, applicants for employment and potential employees.

e. The contractor's EEO policy and the procedures to implement such policy will be brought to the attention of employees by means of meetings, employee handbooks, or other appropriate means.

4. Recruitment: When advertising for employees, the contractor will include in all advertisements for employees the notation: "An Equal Opportunity Employer." All such advertisements will be placed in publications having a large circulation among minorities and women in the area from which the project work force would normally be derived.

a. The contractor will, unless precluded by a valid bargaining agreement, conduct systematic and direct recruitment through public and private employee referral sources likely to yield qualified

minorities and women. To meet this requirement, the contractor will identify sources of potential minority group employees, and establish with such identified sources procedures whereby minority and women applicants may be referred to the contractor for employment consideration.

b. In the event the contractor has a valid bargaining agreement providing for exclusive hiring hall referrals, the contractor is expected to observe the provisions of that agreement to the extent that the system meets the contractor's compliance with EEO contract provisions. Where implementation of such an agreement has the effect of discriminating against minorities or women, or obligates the contractor to do the same, such implementation violates Federal nondiscrimination provisions.

c. The contractor will encourage its present employees to refer minorities and women as applicants for employment. Information and procedures with regard to referring such applicants will be discussed with employees.

5. Personnel Actions: Wages, working conditions, and employee benefits shall be established and administered, and personnel actions of every type, including hiring, upgrading, promotion, transfer, demotion, layoff, and termination, shall be taken without regard to race, color, religion, sex, national origin, age or disability. The following procedures shall be followed:

a. The contractor will conduct periodic inspections of project sites to insure that working conditions and employee facilities do not indicate discriminatory treatment of project site personnel.

b. The contractor will periodically evaluate the spread of wages paid within each classification to determine any evidence of discriminatory wage practices.

c. The contractor will periodically review selected personnel actions in depth to determine whether there is evidence of discrimination. Where evidence is found, the contractor will promptly take corrective action. If the review indicates that the discrimination may extend beyond the actions reviewed, such corrective action shall include all affected persons.

d. The contractor will promptly investigate all complaints of alleged discrimination made to the contractor in connection with its obligations under this contract, will attempt to resolve such complaints, and will take appropriate corrective action within a reasonable time. If the investigation indicates that the discrimination may affect persons other than the complainant, such corrective action shall include such other persons. Upon completion of each investigation, the contractor will inform every complainant of all of their avenues of appeal.

6. Training and Promotion:

a. The contractor will assist in locating, qualifying, and increasing the skills of minorities and women who are applicants for employment or current employees. Such efforts should be aimed at developing full journey level status employees in the type of trade or job classification involved.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

b. Consistent with the contractor's work force requirements and as permissible under Federal and State regulations, the contractor shall make full use of training programs, i.e., apprenticeship, and on-the-job training programs for the geographical area of contract performance. In the event a special provision for training is provided under this contract, this subparagraph will be superseded as indicated in the special provision. The contracting agency may reserve training positions for persons who receive welfare assistance in accordance with 23 U.S.C. 140(a).

c. The contractor will advise employees and applicants for employment of available training programs and entrance requirements for each.

d. The contractor will periodically review the training and promotion potential of employees who are minorities and women and will encourage eligible employees to apply for such training and promotion.

7. Unions: If the contractor relies in whole or in part upon unions as a source of employees, the contractor will use good faith efforts to obtain the cooperation of such unions to increase opportunities for minorities and women. Actions by the contractor, either directly or through a contractor's association acting as agent, will include the procedures set forth below:

a. The contractor will use good faith efforts to develop, in cooperation with the unions, joint training programs aimed toward qualifying more minorities and women for membership in the unions and increasing the skills of minorities and women so that they may qualify for higher paying employment.

b. The contractor will use good faith efforts to incorporate an EEO clause into each union agreement to the end that such union will be contractually bound to refer applicants without regard to their race, color, religion, sex, national origin, age or disability.

c. The contractor is to obtain information as to the referral practices and policies of the labor union except that to the extent such information is within the exclusive possession of the labor union and such labor union refuses to furnish such information to the contractor, the contractor shall so certify to the contracting agency and shall set forth what efforts have been made to obtain such information.

d. In the event the union is unable to provide the contractor with a reasonable flow of referrals within the time limit set forth in the collective bargaining agreement, the contractor will, through independent recruitment efforts, fill the employment vacancies without regard to race, color, religion, sex, national origin, age or disability; making full efforts to obtain qualified and/or qualifiable minorities and women. The failure of a union to provide sufficient referrals (even though it is obligated to provide exclusive referrals under the terms of a collective bargaining agreement) does not relieve the contractor from the requirements of this paragraph. In the event the union referral practice prevents the contractor from meeting the obligations pursuant to Executive Order 11246, as amended, and these special provisions, such contractor shall immediately notify the contracting agency.

8. Reasonable Accommodation for Applicants / Employees with Disabilities: The contractor must be familiar with the requirements for and comply with the Americans with Disabilities Act and all rules and regulations established there under. Employers must provide reasonable accommodation in all employment activities unless to do so would cause an undue hardship.

9. Selection of Subcontractors, Procurement of Materials and Leasing of Equipment: The contractor shall not discriminate on the grounds of race, color, religion, sex, national origin, age or disability in the selection and retention of subcontractors, including procurement of materials and leases of equipment. The contractor

shall take all necessary and reasonable steps to ensure nondiscrimination in the administration of this contract.

a. The contractor shall notify all potential subcontractors and suppliers and lessors of their EEO obligations under this contract.

b. The contractor will use good faith efforts to ensure subcontractor compliance with their EEO obligations.

10. Assurance Required by 49 CFR 26.13(b):

a. The requirements of 49 CFR Part 26 and the State DOT's U.S. DOT-approved DBE program are incorporated by reference.

b. The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the contracting agency deems appropriate.

11. Records and Reports: The contractor shall keep such records as necessary to document compliance with the EEO requirements. Such records shall be retained for a period of three years following the date of the final payment to the contractor for all contract work and shall be available at reasonable times and places for inspection by authorized representatives of the contracting agency and the FHWA.

a. The records kept by the contractor shall document the following:

(1) The number and work hours of minority and non-minority group members and women employed in each work classification on the project;

(2) The progress and efforts being made in cooperation with unions, when applicable, to increase employment opportunities for minorities and women; and

(3) The progress and efforts being made in locating, hiring, training, qualifying, and upgrading minorities and women;

b. The contractors and subcontractors will submit an annual report to the contracting agency each July for the duration of the project, indicating the number of minority, women, and non-minority group employees currently engaged in each work classification required by the contract work. This information is to be reported on [Form FHWA-1391](#). The staffing data should represent the project work force on board in all or any part of the last payroll period preceding the end of July. If on-the-job training is being required by special provision, the contractor will be required to collect and report training data. The employment data should reflect the work force on board during all or any part of the last payroll period preceding the end of July.

III. NONSEGREGATED FACILITIES

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

This provision is applicable to all Federal-aid construction contracts and to all related construction subcontracts of \$10,000 or more.

The contractor must ensure that facilities provided for employees are provided in such a manner that segregation on the basis of race, color, religion, sex, or national origin cannot result. The contractor may neither require such segregated use by written or oral policies nor tolerate such use by employee custom. The contractor's obligation extends further to ensure that its employees are not assigned to perform their services at any location, under the contractor's control, where the facilities are segregated. The term "facilities" includes waiting rooms, work areas, restaurants and other eating areas, time clocks, restrooms, washrooms, locker rooms, and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing provided for employees. The contractor shall provide separate or single-user restrooms and necessary dressing or sleeping areas to assure privacy between sexes.

IV. Davis-Bacon and Related Act Provisions

This section is applicable to all Federal-aid construction projects exceeding \$2,000 and to all related subcontracts and lower-tier subcontracts (regardless of subcontract size). The requirements apply to all projects located within the right-of-way of a roadway that is functionally classified as Federal-aid highway. This excludes roadways functionally classified as local roads or rural minor collectors, which are exempt. Contracting agencies may elect to apply these requirements to other projects.

The following provisions are from the U.S. Department of Labor regulations in 29 CFR 5.5 "Contract provisions and related matters" with minor revisions to conform to the FHWA-1273 format and FHWA program requirements.

1. Minimum wages

a. All laborers and mechanics employed or working upon the site of the work, will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph 1.d. of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph 1.b. of this section) and the Davis-Bacon poster (WH-1321) shall be

posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

b. (1) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(i) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(ii) The classification is utilized in the area by the construction industry; and

(iii) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(2) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(3) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Wage and Hour Administrator for determination. The Wage and Hour Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(4) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs 1.b.(2) or 1.b.(3) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

c. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

d. If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

2. Withholding

The contracting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract, or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the contracting agency may, after written notice to the contractor, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

3. Payrolls and basic records

a. Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

b. (1) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the contracting agency. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals.

Instead the payrolls shall only need to include an individually identifying number for each employee (e.g. , the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <http://www.dol.gov/esa/whd/forms/wh347instr.htm> or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the contracting agency for transmission to the State DOT, the FHWA or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the contracting agency..

(2) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(i) That the payroll for the payroll period contains the information required to be provided under §5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under §5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(ii) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(iii) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(3) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph 3.b.(2) of this section.

(4) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

c. The contractor or subcontractor shall make the records required under paragraph 3.a. of this section available for inspection, copying, or transcription by authorized representatives of the contracting agency, the State DOT, the FHWA, or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the FHWA may, after written notice to the contractor, the contracting agency or the State DOT, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

4. Apprentices and trainees

a. Apprentices (programs of the USDOL).

Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice.

The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed.

Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination.

In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

b. Trainees (programs of the USDOL).

Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration.

The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration.

Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed.

In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

c. Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

d. Apprentices and Trainees (programs of the U.S. DOT).

Apprentices and trainees working under apprenticeship and skill training programs which have been certified by the Secretary of Transportation as promoting EEO in connection with Federal-aid highway construction programs are not subject to the requirements of paragraph 4 of this Section IV. The straight time hourly wage rates for apprentices and trainees under such programs will be established by the particular programs. The ratio of apprentices and trainees to journeymen shall not

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

be greater than permitted by the terms of the particular program.

5. Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

6. Subcontracts. The contractor or subcontractor shall insert Form FHWA-1273 in any subcontracts and also require the subcontractors to include Form FHWA-1273 in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

7. Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

8. Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

9. Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

10. Certification of eligibility.

a. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

b. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

c. The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

V. CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

The following clauses apply to any Federal-aid construction contract in an amount in excess of \$100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These clauses shall be inserted in addition to the clauses required by 29 CFR 5.5(a) or 29 CFR 4.6. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

1. Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the

basic rate of pay for all hours worked in excess of forty hours in such workweek.

2. Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (1.) of this section, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1.) of this section, in the sum of \$10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1.) of this section.

3. Withholding for unpaid wages and liquidated damages. The FHWA or the contacting agency shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (2.) of this section.

4. Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (1.) through (4.) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1.) through (4.) of this section.

VI. SUBLETTING OR ASSIGNING THE CONTRACT

This provision is applicable to all Federal-aid construction contracts on the National Highway System.

1. The contractor shall perform with its own organization contract work amounting to not less than 30 percent (or a greater percentage if specified elsewhere in the contract) of the total original contract price, excluding any specialty items designated by the contracting agency. Specialty items may be performed by subcontract and the amount of any such specialty items performed may be deducted from the total original contract price before computing the amount of work required to be performed by the contractor's own organization (23 CFR 635.116).

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

a. The term “perform work with its own organization” refers to workers employed or leased by the prime contractor, and equipment owned or rented by the prime contractor, with or without operators. Such term does not include employees or equipment of a subcontractor or lower tier subcontractor, agents of the prime contractor, or any other assignees. The term may include payments for the costs of hiring leased employees from an employee leasing firm meeting all relevant Federal and State regulatory requirements. Leased employees may only be included in this term if the prime contractor meets all of the following conditions:

(1) the prime contractor maintains control over the supervision of the day-to-day activities of the leased employees;

(2) the prime contractor remains responsible for the quality of the work of the leased employees;

(3) the prime contractor retains all power to accept or exclude individual employees from work on the project; and

(4) the prime contractor remains ultimately responsible for the payment of predetermined minimum wages, the submission of payrolls, statements of compliance and all other Federal regulatory requirements.

b. "Specialty Items" shall be construed to be limited to work that requires highly specialized knowledge, abilities, or equipment not ordinarily available in the type of contracting organizations qualified and expected to bid or propose on the contract as a whole and in general are to be limited to minor components of the overall contract.

2. The contract amount upon which the requirements set forth in paragraph (1) of Section VI is computed includes the cost of material and manufactured products which are to be purchased or produced by the contractor under the contract provisions.

3. The contractor shall furnish (a) a competent superintendent or supervisor who is employed by the firm, has full authority to direct performance of the work in accordance with the contract requirements, and is in charge of all construction operations (regardless of who performs the work) and (b) such other of its own organizational resources (supervision, management, and engineering services) as the contracting officer determines is necessary to assure the performance of the contract.

4. No portion of the contract shall be sublet, assigned or otherwise disposed of except with the written consent of the contracting officer, or authorized representative, and such consent when given shall not be construed to relieve the contractor of any responsibility for the fulfillment of the contract. Written consent will be given only after the contracting agency has assured that each subcontract is evidenced in writing and that it contains all pertinent provisions and requirements of the prime contract.

5. The 30% self-performance requirement of paragraph (1) is not applicable to design-build contracts; however, contracting agencies may establish their own self-performance requirements.

VII. SAFETY: ACCIDENT PREVENTION

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

1. In the performance of this contract the contractor shall comply with all applicable Federal, State, and local laws governing safety, health, and sanitation (23 CFR 635). The contractor shall provide all safeguards, safety devices and protective equipment and take any other needed actions as it determines, or as the contracting officer may determine, to be reasonably necessary to protect the life and health of employees on the job and the safety of the public and to protect property in connection with the performance of the work covered by the contract.

2. It is a condition of this contract, and shall be made a condition of each subcontract, which the contractor enters into pursuant to this contract, that the contractor and any subcontractor shall not permit any employee, in performance of the contract, to work in surroundings or under conditions which are unsanitary, hazardous or dangerous to his/her health or safety, as determined under construction safety and health standards (29 CFR 1926) promulgated by the Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 3704).

3. Pursuant to 29 CFR 1926.3, it is a condition of this contract that the Secretary of Labor or authorized representative thereof, shall have right of entry to any site of contract performance to inspect or investigate the matter of compliance with the construction safety and health standards and to carry out the duties of the Secretary under Section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C.3704).

VIII. FALSE STATEMENTS CONCERNING HIGHWAY PROJECTS

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

In order to assure high quality and durable construction in conformity with approved plans and specifications and a high degree of reliability on statements and representations made by engineers, contractors, suppliers, and workers on Federal-aid highway projects, it is essential that all persons concerned with the project perform their functions as carefully, thoroughly, and honestly as possible. Willful falsification, distortion, or misrepresentation with respect to any facts related to the project is a violation of Federal law. To prevent any misunderstanding regarding the seriousness of these and similar acts, Form FHWA-1022 shall be posted on each Federal-aid highway project (23 CFR 635) in one or more places where it is readily available to all persons concerned with the project:

18 U.S.C. 1020 reads as follows:

"Whoever, being an officer, agent, or employee of the United States, or of any State or Territory, or whoever, whether a person, association, firm, or corporation, knowingly makes any false statement, false representation, or false report as to the character, quality, quantity, or cost of the material used or to be used, or the quantity or quality of the work performed or to be performed, or the cost thereof in connection with the submission of plans, maps, specifications, contracts, or costs of construction on any highway or related project submitted for approval to the Secretary of Transportation; or

Whoever knowingly makes any false statement, false representation, false report or false claim with respect to the character, quality, quantity, or cost of any work performed or to be performed, or materials furnished or to be furnished, in connection with the construction of any highway or related project approved by the Secretary of Transportation; or

Whoever knowingly makes any false statement or false representation as to material fact in any

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

statement, certificate, or report submitted pursuant to provisions of the Federal-aid Roads Act approved July 1, 1916, (39 Stat. 355), as amended and supplemented;

Shall be fined under this title or imprisoned not more than 5 years or both."

IX. IMPLEMENTATION OF CLEAN AIR ACT AND FEDERAL WATER POLLUTION CONTROL ACT

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts.

By submission of this bid/proposal or the execution of this contract, or subcontract, as appropriate, the bidder, proposer, Federal-aid construction contractor, or subcontractor, as appropriate, will be deemed to have stipulated as follows:

1. That any person who is or will be utilized in the performance of this contract is not prohibited from receiving an award due to a violation of Section 508 of the Clean Water Act or Section 306 of the Clean Air Act.

2. That the contractor agrees to include or cause to be included the requirements of paragraph (1) of this Section X in every subcontract, and further agrees to take such action as the contracting agency may direct as a means of enforcing such requirements.

X. CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION

This provision is applicable to all Federal-aid construction contracts, design-build contracts, subcontracts, lower-tier subcontracts, purchase orders, lease agreements, consultant contracts or any other covered transaction requiring FHWA approval or that is estimated to cost \$25,000 or more – as defined in 2 CFR Parts 180 and 1200.

1. Instructions for Certification – First Tier Participants:

a. By signing and submitting this proposal, the prospective first tier participant is providing the certification set out below.

b. The inability of a person to provide the certification set out below will not necessarily result in denial of participation in this covered transaction. The prospective first tier participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective first tier participant to furnish a certification or an explanation shall disqualify such a person from participation in this transaction.

c. The certification in this clause is a material representation of fact upon which reliance was placed when the contracting agency determined to enter into this transaction. If it is later determined that the prospective participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the contracting agency may terminate this transaction for cause of default.

d. The prospective first tier participant shall provide immediate written notice to the contracting agency to whom this proposal is submitted if any time the prospective first tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

e. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a

participant (such as the prime or general contract). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).

f. The prospective first tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.

g. The prospective first tier participant further agrees by submitting this proposal that it will include the clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transactions," provided by the department or contracting agency, entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.

h. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov/>), which is compiled by the General Services Administration.

i. Nothing contained in the foregoing shall be construed to require the establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of the prospective participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

j. Except for transactions authorized under paragraph (f) of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default.

2. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – First Tier Participants:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

a. The prospective first tier participant certifies to the best of its knowledge and belief, that it and its principals:

(1) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency;

(2) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(3) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (a)(2) of this certification; and

(4) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

b. Where the prospective participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

2. Instructions for Certification - Lower Tier Participants:

(Applicable to all subcontracts, purchase orders and other lower tier transactions requiring prior FHWA approval or estimated to cost \$25,000 or more - 2 CFR Parts 180 and 1200)

a. By signing and submitting this proposal, the prospective lower tier is providing the certification set out below.

b. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department, or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

c. The prospective lower tier participant shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous by reason of changed circumstances.

d. The terms "covered transaction," "debarred," "suspended," "ineligible," "participant," "person," "principal," and "voluntarily excluded," as used in this clause, are defined in 2 CFR Parts 180 and 1200. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations. "First Tier Covered Transactions" refers to any covered transaction between a grantee or subgrantee of Federal funds and a participant (such as the prime or general contractor). "Lower Tier Covered Transactions" refers to any covered transaction under a First Tier Covered Transaction (such as subcontracts). "First Tier Participant" refers to the participant who has entered into a covered transaction with a grantee or subgrantee of Federal funds (such as the prime or general contractor). "Lower Tier Participant" refers any participant who has entered into a covered transaction with a First Tier Participant or other Lower Tier Participants (such as subcontractors and suppliers).

e. The prospective lower tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction

with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.

f. The prospective lower tier participant further agrees by submitting this proposal that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion-Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions exceeding the \$25,000 threshold.

g. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any lower tier prospective participants, each participant may, but is not required to, check the Excluded Parties List System website (<https://www.epls.gov/>), which is compiled by the General Services Administration.

h. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

i. Except for transactions authorized under paragraph e of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion--Lower Tier Participants:

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency.

2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

XI. CERTIFICATION REGARDING USE OF CONTRACT FUNDS FOR LOBBYING

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

This provision is applicable to all Federal-aid construction contracts and to all related subcontracts which exceed \$100,000 (49 CFR 20).

1. The prospective participant certifies, by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:

a. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

b. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

2. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by 31 U.S.C. 1352. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

3. The prospective participant also agrees by submitting its bid or proposal that the participant shall require that the language of this certification be included in all lower tier subcontracts, which exceed \$100,000 and that all such recipients shall certify and disclose accordingly.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

ATTACHMENT A - EMPLOYMENT AND MATERIALS PREFERENCE FOR APPALACHIAN DEVELOPMENT HIGHWAY SYSTEM OR APPALACHIAN LOCAL ACCESS ROAD CONTRACTS

This provision is applicable to all Federal-aid projects funded under the Appalachian Regional Development Act of 1965.

1. During the performance of this contract, the contractor undertaking to do work which is, or reasonably may be, done as on-site work, shall give preference to qualified persons who regularly reside in the labor area as designated by the DOL wherein the contract work is situated, or the subregion, or the Appalachian counties of the State wherein the contract work is situated, except:

a. To the extent that qualified persons regularly residing in the area are not available.

b. For the reasonable needs of the contractor to employ supervisory or specially experienced personnel necessary to assure an efficient execution of the contract work.

c. For the obligation of the contractor to offer employment to present or former employees as the result of a lawful collective bargaining contract, provided that the number of nonresident persons employed under this subparagraph (1c) shall not exceed 20 percent of the total number of employees employed by the contractor on the contract work, except as provided in subparagraph (4) below.

2. The contractor shall place a job order with the State Employment Service indicating (a) the classifications of the laborers, mechanics and other employees required to perform the contract work, (b) the number of employees required in each classification, (c) the date on which the participant estimates such employees will be required, and (d) any other pertinent information required by the State Employment Service to complete the job order form. The job order may be placed with the State Employment Service in writing or by telephone. If during the course of the contract work, the information submitted by the contractor in the original job order is substantially modified, the participant shall promptly notify the State Employment Service.

3. The contractor shall give full consideration to all qualified job applicants referred to him by the State Employment Service. The contractor is not required to grant employment to any job applicants who, in his opinion, are not qualified to perform the classification of work required.

4. If, within one week following the placing of a job order by the contractor with the State Employment Service, the State Employment Service is unable to refer any qualified job applicants to the contractor, or less than the number requested, the State Employment Service will forward a certificate to the contractor indicating the unavailability of applicants. Such certificate shall be made a part of the contractor's permanent project records. Upon receipt of this certificate, the contractor may employ persons who do not normally reside in the labor area to fill positions covered by the certificate, notwithstanding the provisions of subparagraph (1c) above.

5. The provisions of 23 CFR 633.207(e) allow the contracting agency to provide a contractual preference for the use of mineral resource materials native to the Appalachian region.

**STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY CONSTRUCTION
CONTRACT SPECIFICATIONS**

**NOTICE OF REQUIREMENT FOR AFFIRMATIVE
ACTION TO ENSURE EQUAL EMPLOYMENT
OPPORTUNITY (EXECUTIVE ORDER 11246)**

1. The Offeror’s or Bidders attention is called to the “Equal Opportunity Clause” and the “Standard Federal Equal Employment Opportunity Construction Contract Specifications” set forth herein.
2. The goals and timetables for minority and female participation expressed in percentage terms for the Contractor’s aggregate work force in each trade on all construction work in the covered area are as follows:

Goals for Women Apply Nationwide

GOALS AND TIMETABLES

<i>Timetable</i>	<i>Goals (percent)</i>
From Apr. 1, 1976 until March 31, 1979-----	3.1
-	
From Apr. 1, 1979 until March 31, 1980-----	5.1
-	
From Apr. 1, 1980 until March 31, 1981-----	6.9
-	

Goals for Minority Participation

South Carolina

SMSA Counties:.....	16.0
Greenville, Pickens, Spartanburg	
Non-SMSA Counties:.....	17.8
Abbeville, Anderson, Cherokee, Greenwood, Laurens, Oconee, Union	
SMSA Counties:.....	23.4
Lexington, Richland	
Non-SMSA Counties.....	32.0
Calhoun, Clarendon, Fairfield, Kershaw, Lee, Newberry, Orangeburg, Saluda, Sumter	
Non-SMSA Counties.....	33.0
Chesterfield, Darlington, Dillon, Florence, Georgetown, Horry, Marion, Marlboro, Williamsburg	
SMSA Counties:.....	30.0
Berkeley, Charleston, Dorchester	
Non-SMSA Counties.....	30.7
Colleton	
Non-SMSA Counties.....	29.8
Beaufort, Hampton, Jasper	
Non-SMSA Counties.....	15.7
Chester Lancaster York	
Non-SMSA Counties.....	32.8
Barnwell, Edgefield, McCormick, Allendale, Bamberg	
SMSA Counties:.....	27.2
Aiken	

These goals are applicable to all the Contractor’s construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the Contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical areas where the work is actually performed. With regard to this second area, the Contractor is

also subject to the goals for both its federally involved and nonfederally involved construction.

The Contractor’s compliance with the Executive Order and the regulations in 41 CFR Part 60-4 Shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a) and its efforts to meet the goals established for the geographical area where the contract resulting from this solicitation is to be performed. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees of trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor’s goals shall be a violation of the contract, the Executive Order and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. The Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 working days of award of any construction subcontract in excess of \$10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor, employer identification number, estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the contract is to be performed.
4. As used in this Notice and in the contract resulting from this solicitation, the “covered area” is (insert description of the geographical areas where the contract is to be performed giving the state, county, and city, if any). The “covered area is the SMSA County or Counties or Non-SMSA County or Counties in which the contract work is performed.

**STANDARD FEDERAL EQUAL EMPLOYMENT
OPPORTUNITY CONSTRUCTION CONTRACT
SPECIFICATIONS
(EXECUTIVE ORDER 11246)**

1. As used in these specifications:
 - a. “Covered area” means the geographical area described in the solicitation from which this contract resulted;
 - b. “Director” means Director, Office of Federal Contract Compliance Programs, United States Department of Labor, or any person to whom the Director delegates authority;
 - c. “Employer identification number” means the Federal Social Security number used on the Employers Quarterly Federal Tax Return, U. S. Treasury Department Form 941.
 - d. “Minority” includes:
 - (i) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);
 - (ii) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin regardless of race);
 - (iii) Asian or Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and
 - (iv) American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

2. Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of \$10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.
3. If the Contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U. S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each Contractor or Subcontractor participating in an approved Plan is individually required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other Contractors or Subcontractors toward a goal in an approved Plan does not excuse any covered Contractor's or Subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.
4. The Contractor shall implement the specific affirmative action standards provided in paragraphs 7a through p of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Contractor should reasonably be able to achieve in which it has employees in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notices form and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. The Contractor is expected to make substantially uniform progress toward its goals in each craft during the period specified.
5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement to refer either minorities or women shall excuse the Contractor's obligations under these specifications, Executive Order 11246, or the regulations promulgated pursuant thereto.
6. In order for the non-working training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U. S. Department of Labor.
7. The Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:
 - a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority of female individuals working at such sites or in such facilities.
 - b. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available and maintain a record of the organization's responses.
 - c. Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefor, along with whatever additional actions the Contractor may taken.
 - d. Provide immediate written notification to the Director when union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet his obligations.
 - e. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under 7b above.
 - f. Disseminate the Contractor's EEO policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.
 - g. Review at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with on-site supervisory personnel such as Superintendents, General Foremen, etc., prior to the initialization of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.
 - h. Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.
 - i. Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall sent written notification to organizations such as the above, describing

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

- the openings, screening procedures and tests to be used in the selection process.
- j. Encourage present minority and female employees to recruit other minority persons and women and where reasonable, provide after school, summer, and vacation employment to minority and female youth both on the site and in other areas of a Contractor's work force.
 - k. Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.
 - l. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.
 - m. Ensure that all seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.
 - n. Ensure that all facilities and company activities are non-segregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.
 - o. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.
 - p. Conduct a review, at least annually of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.
8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (7a through p). The efforts of a contractor association joint contractor-union, contractor-community, or other similar group of which the Contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under 7a through p of these specifications provided that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the contractor's minority and female work force participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor's and failure of such a group to fulfill an obligation shall not be a defense for the Contractor's noncompliance.
 9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).
 10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.
 11. The Contractor shall not enter into any Subcontract with any person or firm debarred from the Government contracts pursuant to the executive Order 11246.
 12. The Contractor shall carry out such sanctions and penalties for violation of these specifications and the Equal Opportunity Clause, including suspensions, termination and cancellation of the existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended. and its implementing regulations, by the Office if the Federal Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of the specifications and Executive Order 11246, as amended.
 13. The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4-8.
 14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any employee identification number when assigned, social security number, race, sex status(e.g., Mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and location at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that the existing records satisfy this requirement, contractors shall not be required to maintain separate records.
 15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents(e.g. those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

GENERAL DECISION NUMBER SC20200035

"General Decision Number: SC20200035 01/03/2020

Superseded General Decision Number: SC20190035

State: South Carolina

Construction Type: Highway

Counties: Calhoun, Fairfield, Kershaw, Lexington, Richland and Saluda Counties in South Carolina.

HIGHWAY CONSTRUCTION PROJECTS (excluding tunnels, building structures in rest area projects & railroad construction; bascule, suspension & spandrel arch bridges designed for commercial navigation, bridges involving marine construction; and other major bridges).

Note: Under Executive Order (EO) 13658, an hourly minimum wage of \$10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least \$10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

=====

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification

and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of "identifiers" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than "SU" or "UAVG" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all

rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS
--

- * an existing published wage determination
- * a survey underlying a wage determination
- * a Wage and Hour Division letter setting forth a position on a wage determination matter
- * a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

EXHIBIT 5 – SPECIAL PROVISIONS AND CONTRACT REQUIREMENTS

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

=====

END OF GENERAL DECISION

"

EXHIBIT 6

RAILROAD INFORMATION

1. GENERAL

CSX Transportation (CSXT or the Railroad) has a railroad facility which runs parallel to I-126 throughout the project limits of this Project. The Project will include construction of a new bridge over CSXT railroad and highway construction immediately adjacent to the CSXT railroad right of way.

2. PROJECT SPECIFIC INFORMATION AND COORDINATION MATERIALS

2.1 General Design Information

Provide 50-ft of horizontal clearance orthogonal to and centered on the mainline tracks and CSXT right-of-way. This is to accommodate access roads, utilities, drainage, and two (2) future tracks, one either side of the existing mainline, with 15-ft track centers. Assume top-of-rail elevations to match that of the existing mainline rails. Also, the standard 23-ft minimum vertical clearance will be required over all three tracks, six (6) feet from each track centerline. The structure shall bridge the entire right of way. MSE walls will not be permitted in the right of way. If the track is located in a sag vertical curve, the vertical clearance shall be set assuming the track will be raised sufficiently to remove the sag.

2.2 CONTRACTOR Produced Information

The CONTRACTOR shall deliver any Project specific information and railroad coordination materials necessary to SCDOT for SCDOT review and comment, in advance of any distribution deadline to the Railroad, such that SCDOT's comments will be addressed prior to subsequent distribution to the Railroad. All correspondence related to the railroad conditions shall include the Railroad file number and Railroad milepost information.

2.3 Attachment B

Information regarding Railroad, specific to this Project, is posted in Attachment B.

2.4 Compliance with Requirements

CONTRACTOR shall perform all Railroad work in accordance with the Railroad's *Public Project Information For Construction and Improvement Projects That May Involve the Railroad*, Prepared by the Public Projects Group, CSX Transportation Inc., Jacksonville, Florida, (last revised July 2017) (Railroad's Public Project Manual) located on the Railroad website at <https://www.csx.com/index.cfm/library/files/about-us/property/public-project-manual/>.

CONTRACTOR shall not commence the work on the Phase 1 Project either on Railroad property or within fifty (50) feet of any railroad property or affect any railroad bridge, trestle, track, roadbed, tunnel, underpass or crossing, unless and until the CONTRACTOR satisfies the following conditions:

- The CONTRACTOR’s Agreement has been signed. CONTRACTOR must use the Schedule I form that is provided on the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section;
- CONTRACTOR has provided Railroad with proof of insurance required by the CONTRACTOR’s Agreement satisfactory to Railroad. CONTRACTOR must use the Insurance Approval Request form that is provided on the SCDOT Design-Build website under the SCDOT Design-Build Standard Forms Section; and
- CONTRACTOR has complied with the notice requirements set forth in the Railroad’s Public Project Manual on the Railroad’s website.

All design and construction activities within 50 feet of nearest centerline, adjacent to, over or under the any railroad centerline on the site shall comply with all terms and conditions identified in the Railroad’s Pubic Project Manual.

2.5 Mandatory Meetings

The CONTRACTOR shall schedule and attend a mandatory meeting with SCDOT’s Railroad Projects Office within 30 days after the Notice to Proceed. This meeting will clarify and define the CONTRACTOR’s continuance of railroad coordination throughout the Project’s design and construction. More specific communication protocols, consistent with this Exhibit 6, with respect to CONTRACTOR’s interaction and interface with the Railroad through SCDOT will also be established.

2.6 Insurance Requirements

CONTRACTOR shall comply with the insurance requirements specified in the Railroad’s Public Project Manual as set forth on the Railroad’s website, on or before the commencement of such portions of the work as involve or reasonably could be construed to involve the Railroad.

2.7 Right of Way

CONTRACTOR shall anticipate the need for SCDOT and the Railroad to enter into a real property agreements pertaining to any permanent improvements of the Project that encroach on Railroad’s property. CONTRACTOR shall not access the Railroad property until 18 months after receipt by SCDOT of approved right of way plans.

EXHIBIT 7

UTILITY CRITERIA

1. GENERAL INFORMATION / DEFINITIONS

The SCDOT has performed preliminary utility coordination efforts for the I-20 / I-26 / I-126 “Carolina Crossroads” project located on I-26 from US 176 (Broad River Road) to US 378 (Sunset Boulevard) and on I-20 from Bush River Road (S-32-273) to US 176 (Broad River Road) and on I-126 from I-26 to west of Colonial Life Boulevard. This effort included underground and above ground utility mapping and Subsurface Utility Engineering (SUE) in accordance with American Society of Civil Engineering (ASCE) *Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data* (CI/ASCE 38-02). Level B and C SUE, as of November 15, 2018, is provided in Attachment B to establish existing utility facilities for the Project, but it will be CONTRACTOR’S responsibility to verify any new utility facilities installed since SUE was obtained within the limits provided and is responsible for verifying all utilities outside limits provided.

Level B SUE was performed for directed buried conventional telecommunication lines 100-pair or larger, conventional telecommunication and CATV line in conduit, all fiber optic utility mains, all gas mains, all water mains, all force main sanitary sewer lines and underground transmission utilities.

Level C SUE was performed for direct buried conventional telecommunication lines less than 100-pair and direct buried coaxial CATV lines. Sanitary sewer lines mains are depicted at Quality Level ‘C’ (QL-C) from manhole to manhole.

Services to residents and business are not included. CONTRACTOR shall meet with the SCDOT’S Mega Projects Team and Utilities Office within 30 days after the Notice to Proceed. Intent of meeting will be to clarify and define the CONTRACTOR’S utility coordination and specific Utility Work to be carried out by CONTRACTOR during the Project’s design and construction.

2. UTILITY WORK PERFORMED BY UTILITY

Except for Dominion Energy Power Transmission (DEPT), set forth in section 4 below, CONTRACTOR shall initiate early coordination with all Utility Owners performing Utility Work and provide the Utility Owners with design plans for their use in developing relocation sketches as soon as the plans have reached a level of completeness adequate to allow the Utility Owner to fully understand the Project impacts. If a party other than the Utility Owner prepares relocation sketches, there shall be a concurrence box on the plans where the Utility Owner accepts the relocation sketches as shown.

CONTRACTOR shall be responsible for collecting and submitting to SCDOT the following from each Utility Owner whose utility facilities are located, whether by Utility Adjustment, Protection in Place, or otherwise, within the Project’s right-of-way:

- **Relocation Sketches** including letters of “no cost” where the Utility Owner does not have Prior Rights;

- **Utility Agreements between SCDOT and Utility Owners** including documentation of Prior Rights, cost estimate and relocation plans where the Utility Owner has Prior Right; and/or
- **Letters of “no conflict”** where the Utility Owner’s facilities will not be adversely affected by the Project. Include location sketches on SCDOT plans confirming and certifying that utility facilities do not present a conflict.
- **Encroachment Permits** for all Utility Adjustments regardless of which entity has Prior Rights.

CONTRACTOR shall assemble the information required under the Utility Agreements and such other agreements between SCDOT and the Utility Owner as part of the Released For Construction (RFC) document package.

3. UTILITY WORK PERFORMED IN-CONTRACT BY CONTRACTOR

CONTRACTOR is responsible for all Utility Work, including all costs, utility coordination, permitting, design and construction necessary for Utility Work of In-Contract Utility Work scope of work utility facilities that are in conflict with the CONTRACTOR’S design.

CONTRACTOR shall be aware of the boundaries of the Project Study Area (PSA) and the impacts documented in the combined Final Environmental Impact Statement (FEIS) / Record of Decision (ROD) approved for the Carolina Crossroads Project by the Federal Highway Administration (FHWA) on May 2, 2019 and US Army Corps of Engineers (USACE) Section 404 Individual Permit, (both included in Attachment B) and shall avoid or minimize impacts to the most practicable extent. In cases where impacts cannot be avoided, or if the CONTRACTOR elects to construct the Project in a manner that is not consistent with the assumptions in the SCDOT prepared environmental documents, the CONTRACTOR shall be responsible for performing a NEPA Re-Evaluation and any necessary permit modifications. See Article IX, Article X and Exhibit 8 for additional information.

CONTRACTOR shall apply for and receive all necessary permits, including Construction Permit Application for Water/Wastewater Facilities through DHEC, for the Utility Work within SCDOT rights-of-way. See Exhibit 8 and Agreement Article IX for information on USACE Section 404 Individual Permit already obtained by SCDOT and for additional USACE Section 404 permits, mitigation, and coordination required for Utility Work.

The CONTRACTOR shall perform In-Contract Utility Work for the following Utility Companies:

3.1 City of Columbia – Water & Sewer

The proposed In-Contract Utility Work shall consist of relocating the City of Columbia (COC) 30-in PCCP sanitary sewer force main from I-26 Ramp C Station 5406+50 left to I-26 Ramp C Station 5423+50 right, and relocating the Colonial Life Road Pump Station, including the associated gravity system feeding the pump station, from the pump station’s current location on Tract 401 to Tract 404.

Additional In-Contract Utility Work may be required based on the CONTRACTOR'S design impacting existing COC Utilities per SCDOT's Utility Accommodations Manual, *"A Policy for Accommodating Utilities on Highway Rights-of-Way"*, applicable State laws, and Code of Federal Regulations, Title 23, Chapter 1, Subchapter G, Part 645, Subparts A and B (From Article VII, Part C).

CONTRACTOR shall make certain all Utility Work is in compliance with all applicable SCDOT policies, including SCDOT's Utilities Accommodations Manual – A Policy for Accommodating Utilities on Highway Rights of Way, incorporated herein by reference.

The Utility Work shall be designed by a designer approved by COC and licensed and qualified to perform the Utility Work. CONTRACTOR shall either select the designer to design the Utility Work from COC's list of preferred designers, or will apply to become qualified by COC in order to self-perform. The Utility Work shall be constructed by a CONTRACTOR approved by COC and licensed and qualified to perform the Utility Work. CONTRACTOR shall either select the CONTRACTOR to perform the Utility Work from COC's list of preferred contractors, or will apply to become qualified by COC in order to self-perform. List of COC-approved designers and contractors along with procedures for becoming a COC approved designer and CONTRACTOR is included in Attachment B.

COC's construction specifications, Standards and Design Criteria are included in Attachment B.

3.1.1 Design Criteria

Design Criteria shall mean the standard Design Criteria of the COC for capital projects as provided by the COC, along with the Colonial Life Water Sewer Pump Station design criteria, and all state, local, and federal codes and standards and any other criteria, including any known betterments, for the design and construction of the Utility.

CONTRACTOR shall be responsible for all costs and schedule impacts and delays due to failure to adhere to COC's Design Criteria and Standard Specifications.

CONTRACTOR shall submit Utility Work design plans (Utility Plans) to SCDOT and SCDOT to submit to COC for review; following COC's review of the plans, CONTRACTOR shall resolve COC's comments and obtain COC approval prior to submittal of Released for Construction (RFC) plans.

CONTRACTOR shall submit 30-percent, 60-percent, and 100-percent Utility Plans to SCDOT for design review in accordance with Article II, Exhibit 4z, Exhibit 7, and Attachment B. Utility Plans shall be in accordance with COC design requirements in Attachment B. Utility Plans for Utility Work shall be independent plans under separate cover from roadway plans, but utility design

shall be fully coordinated with the roadway design. The roadway design, including drainage systems and all structures, shall be shown in the Utility Plans.

CONTRACTOR shall submit 30 percent Utility Plans based on CONTRACTOR'S design with the Preliminary Road Submittal Package. CONTRACTOR shall submit 60 percent Utility Plans with the Right- of-Way Plans Submittal Package. CONTRACTOR shall submit 100 percent Utility plans with the Final Road Submittal Package.

CONTRACTOR shall coordinate with COC concerning schedule for Utility Work and to allow access for observation and inspection. CONTRACTOR shall coordinate the construction schedule with COC and provide three business days' notice for days in which the CONTRACTOR plans to perform Utility Work, and CONTRACTOR shall invite COC to attend all utility meetings. CONTRACTOR shall allow COC or COC's Consulting Engineer and/or Inspector access to the site when the Utility Work is underway, allowing COC unimpeded access to COC's facilities in cases of emergencies and for operational maintenance issues.

CONTRACTOR shall coordinate the sequencing of waterline relocation, testing, and placing into service with COC to ensure the existing line remains in service until all tests and approvals are in place and provided to COC to place the new segments into service. At no time during construction shall the existing segments that are being relocated be taken out of service until the new lines are placed into service. This is necessary to avoid interruption of service to customers along the Project route. CONTRACTOR shall provide COC a 10 business day notice that a portion of Utility Work will be in place and ready for testing to allow COC to schedule inspection staff to be present to observe testing, disinfection, and sampling.

All work performed by CONTRACTOR shall be performed within SCDOT Rights-of-Way, or within COC's existing easements, as coordinated with and approved by SCDOT. CONTRACTOR may access the service connection locations and tie points outside of SCDOT's right-of-way where COC has right-of-entry to complete Utility Work.

COC shall maintain existing facilities in place at its expense until new facilities that are acceptable to COC have been constructed, tie-ins and switch-overs have been completed, and existing facilities are ready to be removed. CONTRACTOR shall be responsible for installation and maintenance of all temporary facilities and maintains ownership of temporary facilities, while COC retains responsibility for operation of any temporary supporting systems facilities which support the operation of the CONTRACTOR's temporary facilities.

CONTRACTOR shall name the COC as an additional insured on all policies covering CONTRACTOR'S work on this Project as required in the Agreement. CONTRACTOR will provide copies to the COC. CONTRACTOR shall be

responsible for the Utility Work until it is accepted by COC and shall warranty Utility Work in accordance with the Warranty Article in the Agreement.

CONTRACTOR shall install Utility Work in accordance with the Released For Construction (RFC) plans and shall notify COC and SCDOT when scope items are installed per the plans. CONTRACTOR shall notify COC of opportunity to include time and place to inspect recovered materials from the permanent facility prior to disposal by sale or scrap.

CONTRACTOR shall coordinate with COC to obtain acceptance of Utility Work as defined below:

- **Substantial Utility Work Completion** – shall mean the date on which any portion of the Utility Work is installed, inspected, and placed into service in accordance with COC’s plans and specifications. CONTRACTOR to coordinate and notify COC when Utility Work has been installed, inspected, and placed into service.
- **Final Utility Work Acceptance** – shall mean the date beyond Substantial Utility Work Completion on which any portion of the Utility Work has been placed into services; switch-over of services has been completed, or all work necessary to enable Utility Work to be used by consumer enabling the original facility to be demolished; old facilities have been disconnected and demolished; CONTRACTOR shall submit record drawings for approval by COC; and CONTRACTOR shall certify the construction and receive a permit to operate from SC DHEC.
- **Acceptance of Utility Work** – shall mean COC’s taking control of the finished Utility Work, or any portion thereof, in its final form after COC confirms that all design criteria and requirements have been met and COC has acknowledged Final Utility Work Acceptance.
 - a) **Taking Control** – shall mean utilizing the relocated facility to provide service to its customers and abandoning existing facilities.

3.2 South Carolina Department of Administration

The proposed In-Contract Utility Work will consist of relocating the South Carolina Department of Administration’s (SCDOA) fiber optic cable, consisting of 6,750-ft of 120 CT fiber cable from hand hole near SCDOT Camera #11, located at I-126 Station 17+35 RT, to hand hole near SCDOT Camera #9, located at I-126 Station 81+55 RT.

Additional In-Contract Utility Work may be required based on the CONTRACTOR’S design impacting existing SCDOA Utilities per SCDOT’s Utility Accommodations Manual, “*A Policy for Accommodating Utilities on Highway Rights-of-Way*”, applicable State laws, and Code of Federal Regulations, Title 23, Chapter 1, Subchapter G, Part 645, Subparts A and B (From Article VII, Part C).

SCDOA's existing fiber optic cable is incorporated in SCDOT's existing ITS infrastructure and CONTRACTOR shall carry out Utility Adjustments to SCDOA facilities as part of the Intelligent Transportation System work outlined in Exhibit 4d. CONTRACTOR shall make certain all Utility Work is in compliance with this Contract, all applicable SCDOT policies, including SCDOT's Utilities Accommodations Manual – *A Policy for Accommodating Utilities on Highway Rights of Way*, incorporated herein by reference.

CONTRACTOR shall be responsible for all costs and schedule impacts and delays due to failure to adhere to SCDOA's Design Criteria and Standard Specifications.

CONTRACTOR shall submit Utility plans to SCDOT for review by SCDOT and SCDOA. Plans for Utility Work shall be independent plans under separate cover from roadway plans, but utility design shall be fully coordinated with the roadway design. The roadway design, including drainage systems and all structures, shall be shown in the Utility plans.

CONTRACTOR shall submit Utility plans in accordance with Exhibit 4d Part 6 – ITS, Exhibit 4z and Exhibit 5.

CONTRACTOR shall coordinate with SCDOA concerning schedule for Utility Work and to allow access for observation and inspection. CONTRACTOR shall allow SCDOA or SCDOA's Consulting Engineer and/or Inspector access to the site when the Utility Work is underway, allowing SCDOA unimpeded access to SCDOA's facilities in cases of emergencies and for operational maintenance issues. CONTRACTOR shall coordinate the construction schedule with SCDOA and provide three business days' notice for days in which the CONTRACTOR plans to perform Utility Work, and CONTRACTOR shall invite SCDOA to attend all utility meetings.

CONTRACTOR shall provide SCDOA a 10 business day notice that a portion of Utility Work will be in place and ready for cut-overs to allow SCDOA to schedule inspection staff to be present to observe testing and cut-overs.

All work covered under this agreement and performed by CONTRACTOR shall be performed within SCDOT Rights-of-Way, or within SCDOA's easements, as coordinated with and approved by SCDOT. CONTRACTOR may access the service connection locations and tie points outside of SCDOT's right-of-way where SCDOA has right-of-entry to complete Utility Work.

SCDOA shall maintain existing facilities in place at its expense until new facilities that are acceptable to SCDOA have been constructed, tie-ins and cut-overs have been completed, and existing facilities are ready to be removed. CONTRACTOR shall be responsible for installation and maintenance of all temporary facilities and maintains ownership of temporary facilities, while SCDOA retains responsibility for operation of any temporary supporting systems facilities which support the operation of the CONTRACTOR's temporary facilities.

CONTRACTOR shall name the SCDOA as an additional insured on all policies covering CONTRACTOR’S work on this Project as required in the Agreement. CONTRACTOR will provide copies to the SCDOA. CONTRACTOR shall be responsible for the Utility Work until it is accepted by SCDOA and shall warranty Utility Work in accordance with Warranty Article of the agreement.

CONTRACTOR shall install Utility Work in accordance with the plans and shall notify SCDOA and SCDOT when scope items are installed per the plans. CONTRACTOR shall notify SCDOA of opportunity to include time and place to inspect recovered materials from the permanent facility prior to disposal by sale or scrap.

CONTRACTOR shall coordinate with SCDOA to obtain acceptance of Utility Work as defined below:

- **Substantial Utility Work Completion** – shall mean the date on which any portion of the Utility Work is installed, inspected, and placed into service in accordance with SCDOA’s plans and specifications. CONTRACTOR to coordinate and notify SCDOA when Utility Work has been installed, inspected, and placed into service.
- **Final Utility Work Acceptance** – shall mean the date beyond Substantial Utility Work Completion on which any portion of the Utility Work has been placed into service; cut-over of services has been completed; old facilities have been disconnected and demolished; CONTRACTOR shall submit record drawings for approval by SCDOA; and CONTRACTOR shall certify the construction and receive a permit to operate, if applicable.
- **Acceptance of Utility Work** – shall mean SCDOA’s taking control of the finished Utility Work, or any portion thereof, in its final form after SCDOA confirms that all design criteria and requirements have been met and SCDOA has acknowledged Final Utility Work Acceptance.
- **Taking Control** – shall mean utilizing the relocated facility to provide service to its customers and abandoning existing facilities.

4. DOMINION ENERGY POWER TRANSMISSION

SCDOT has provided preliminary utility coordination efforts with DEPT, including prior rights determination and certification that the DEPT has 100% prior rights, and has identified that there are four overhead crossings within the project limits. It has been determined that the crossing near the Colonial Life Boulevard overpass at I-126 has a direct conflict with the Project, crossing OH U58 DE-T OH crossing I-126 (Station 40+00), I-26 Ramp C (Station 5434+50), Colonial Life Ramp C (Station 5039+50), Colonial Life Ramp D (Station 6040+90). The other three overhead crossings, U33 crossing I-26 (Station 416+00); U34 crossing I-26 (Station 424+25); U58 crossing I-126 (Station 38+00) I-26 Ramp C (Station 5432+00), Colonial Life Ramp C (Station 5037+00) Colonial Life Ramp D (Station 6039+00), have been determined “no conflict” based on current Modified Selected Alternative and overhead power

elevations. It is the CONTRACTOR's responsibility to obtain no-conflict letters for all four DEPT overhead crossings once relocation is completed.

DEPT has agreed to initiate engineering efforts and to proceed with relocation efforts to span I-126 at an elevation that would not impact the Modified Selected Alternative. The relocation effort timeframe for this crossing is 15 months. DEPT will relocate their double circuit, three-phase power transmission 100 kV overhead line over I-126 at Station 40+00. The CONTRACTOR shall anticipate and include in its project schedule that all work proposed by the DEPT will not be completed until **November 30, 2021**. CONTRACTOR shall coordinate with DEPT so as not to interfere with or delay any construction activities performed by DEPT.

CONTRACTOR is advised that, in an effort to advance the relocation of this utility ahead of the design build construction contract, SCDOT has entered into a preliminary engineering agreement with DEPT regarding the relocation of the utility. CONTRACTOR shall design the Project in such a way that accommodates this relocation as shown in the DEPT preliminary relocation plans included in Attachment B or as revised in accordance with an approved ATC. CONTRACTOR is not responsible for obtaining construction agreements for this specific utility (DEPT) but is required to coordinate construction activities, unless the CONTRACTOR's design deviates from the current Modified Selected Alternative.

5. PROJECT CLOSEOUT DELIVERABLES

5.1 Certification

At the time that CONTRACTOR notifies SCDOT that CONTRACTOR has reached Final Completion, CONTRACTOR shall certify to SCDOT that all utilities have been identified and that those utilities with Prior Rights or other claims related to relocation or coordination with the Project have been relocated or their claims otherwise satisfied by CONTRACTOR.

5.2 As-Built Plans

CONTRACTOR shall accurately show the final location of all utilities on the as-built drawings for the Project.

EXHIBIT 8

ENVIRONMENTAL DESIGN CRITERIA

1. GENERAL

The CONTRACTOR shall avoid impacts to the environment to the most practicable extent. In cases where impacts cannot be avoided, the CONTRACTOR shall minimize impacts to the environment to the most practicable extent.

As a minimum, the CONTRACTOR shall include the following in the Project:

- The CONTRACTOR shall provide an Environmental Compliance Plan for the Project. The plan shall be submitted to and approved by SCDOT prior to any construction activity. The plan shall identify specific measures that the CONTRACTOR will implement to ensure compliance with all environmental documents, permits, and other environmental commitments. The plan shall also designate specific personnel that are charged with carrying out monitoring and compliance activities included in the Environmental Compliance Plan.
- The CONTRACTOR shall stake out and delineate the jurisdictional area using temporary barrier fence as set forth in Supplemental Specification and in accordance with the preliminary jurisdictional determination issued by USACE.
- Fines assessed by any agencies to SCDOT as the result of the CONTRACTOR’s non-compliance or violation of any permit provisions shall be paid by SCDOT and subsequently deducted from the CONTRACTOR’s monthly pay estimate.
- The CONTRACTOR shall coordinate all permitting through SCDOT’s Environmental Services Office (ESO).
- CONTRACTOR shall provide a summary report documenting how all commitments that fall within its responsibility have been satisfied.

2. ENVIRONMENTAL DOCUMENT COMMITMENTS

The CONTRACTOR shall comply with all Environmental Commitments set forth in the combined Final Environmental Impact Statement / Record of Decision (FEIS/ROD) dated May 2, 2019 and Re-evaluation dated August 3, 2020 and other environmental information that is provided in Attachment B.

The following list of Environmental Commitments and instructions outline requirements and responsibilities for SCDOT and the CONTRACTOR regarding fulfilling the Environmental Commitments for the Project.

1. SCDOT will work with the Central Midlands Rural Transit Authority / COMET (CMRTA/COMET) and the Central Midlands Council of Governments (CMCOG) to develop two park-and-ride lots to improve mobility during construction and mitigate congestion resulting from the project. SCDOT would construct the two sites and maintain them during construction of the project. Engineering feasibility, timing and continued maintenance of the sites would be determined in coordination with CMRTA and the CMCOG prior to the start of construction. In the event a permanent site cannot be developed, SCDOT would work with CMRTA and CMCOG to identify and provide funding for existing parking lots that could be leased for park-and-ride use during construction.

SCDOT shall comply with this commitment by conducting a site assessments and evaluations for park and ride facility locations in the project area in coordination with CMRTA and CMCOG. Therefore, no work is required of the CONTRACTOR.

2. SCDOT will implement a congestion management tool/commuter services application to improve mobility during construction and mitigate congestion by informing commuters of available options such as carpooling, ridesharing, vanpools and other transit oriented options.

SCDOT shall comply with this commitment. Therefore, no work is required of the CONTRACTOR.

3. SCDOT will assist COMET/CMRTA ongoing efforts through such measures as accommodating transit (bus) stops at interchange locations, which may include bus turnout. In addition, SCDOT will work with CMRTA to monitor bus operations and capacity during construction and in the event that capacity is reached, SCDOT will provide support in determining funding for enhanced bus service during construction based upon a framework to be agreed upon with CMRTA.

SCDOT shall comply with this commitment. Therefore, no work is required of the CONTRACTOR.

4. Prior to final design, SCDOT will coordinate with the City of Columbia and CMCOG to ensure that existing and planned bicycle and pedestrian facilities identified in the local and regional plans and existing and proposed connections to such facilities are accommodated where located within the limits of the Carolina Crossroads project at crossing routes and interchanges where feasible.

SCDOT has incorporated the appropriate aspects of this commitment into this Contract. CONTRACTOR shall comply with this commitment by including appropriate bicycle and pedestrian accommodations within the Project.

5. During final construction, SCDOT will accommodate bicycle/pedestrian access. SCDOT will coordinate with the local municipalities and/ or trail groups to post information on temporary sidewalk or bicycle facility closures or detours. Sidewalk and/or bicycle lane/path closures will be communicated to the agency with jurisdiction at least 48 hours in advance and appropriate signage will be placed.

SCDOT will provide appropriate notice to local municipalities and/or trail groups for any temporary sidewalk or bicycle facility closures or detours. CONTRACTOR shall comply with this commitment by supplying SCDOT with the appropriate closure information prior to closures in accordance with the public notice conditions of this Contract, including the Community and Public Relations Support Plan (Section 107) set forth in Exhibit 5.

6. SCDOT will acquire all new right-of-way and process any relocations in compliance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (42 U.S.C. 4601 et seq.) and the SCDOT ROW Manual. The purpose of

these regulations is to ensure that owners of real property to be acquired for federal and federally-assisted projects are treated fairly and consistently, to encourage and expedite acquisition by agreements with such owner, to minimize litigation and relieve congestion in the courts, and to promote public confidence in federal and federally-assisted land acquisition programs.

Temporary construction easements may be needed for some properties. SCDOT will temporarily use these properties during construction and would provide compensation to the landowner for the temporary use. The property will be fully returned to the owner when the use of the property is no longer required, typically when construction is complete.

SCDOT shall comply with this commitment for parcels acquired and provided to the CONTRACTOR for use on this Project.

7. Changes in access for school bus routes will be discussed with the school system in advance of when they will actually take place, so that the school systems can adjust routes in a timely manner. Coordination with local school districts will also occur during construction. SCDOT and the CONTRACTOR will coordinate with the school system during development of the community outreach program.

SCDOT will provide appropriate notice to the local school districts.

The CONTRACTOR shall comply with this commitment by supplying SCDOT with the appropriate closure information and providing construction alert drafts to allow enough time for approvals and distribution in accordance with the public notice conditions of this Contract outlined in this Contract, including the Contract Requirements, Community and Public Relations Support Plan (Section 107) set forth in Exhibit 5

8. Written translations of public involvement documents will be provided for Spanish language speaking populations, as well as other measures determined by SCDOT to ensure meaningful access to project information during construction. Efforts will be made to ensure meaningful opportunities for public participation during construction. Additional meetings will be held when warranted to address community concerns.

SCDOT shall comply with this commitment.

9. The CONTRACTOR(s), through a community outreach program, will let the community know what types of closures to expect (i.e. temporary, long-term), when to expect them and who to contact, if needed.

SCDOT and the CONTRACTOR(s) will coordinate with emergency service providers such as police, fire protection and ambulance services before construction to ensure that access for emergency vehicles will be maintained.

SCDOT will be responsible for directing the communications efforts with the community. SCDOT will provide appropriate notice to emergency service providers.

The CONTRACTOR shall comply with this commitment by supplying SCDOT with the appropriate maintenance of traffic information and providing construction alert drafts no less than ten days prior to the start of any closure or change in traffic configuration due to construction to allow enough time for approvals and distribution in accordance with the public notice conditions of this Contract, including the Community and Public Relations Support Plan (Section 107) set forth in Exhibit 5.

10. Based on the studies thus far accomplished, SCDOT intends to install highway traffic noise abatement measures in the form of a barrier at Noise Sensitive Area (NSA) O and S. These barriers are located on the south side of I-20 from the Saluda River extending approximately 2,300 feet west (Barrier O), and on the south side of I-20 from the Broad River Road exit extending approximately 4,380 feet east towards the Broad River (Barrier S). These preliminary indications of likely abatement measures are based upon preliminary design for a barrier cost of \$35.00 per square foot that will reduce the noise level by at least 5 dB(A) for residences. If it subsequently develops during final design that these conditions have substantially changed, the abatement measures might not be provided. A final decision of the installation of the abatement measure(s) will be made upon completion of the project's design. Since there are residences located on the opposite side of the interstate adjacent to Barriers O and S, sound absorption materials will be added to the barriers to minimize noise reflectivity of the barriers towards receptors on the other side of the interstate.

SCDOT will comply with construction of Barriers O and S in other contracts for other Phases of the Carolina Crossroads Project. However, if the CONTRACTOR constructs the Project in a manner that is not consistent with the assumptions in the SCDOT prepared environmental documents, the CONTRACTOR shall be responsible for revising the environmental documents (re-evaluation), updating traffic noise analysis, public involvement and construction of noise wall(s) if determine to be reasonable and feasible in updated noise analysis.

11. In order to help local officials and developers consider highway traffic noise in the vicinity of a proposed Type I project, SCDOT will inform them of the predicted future noise levels and the required distance from the roadways needed to ensure that noise levels remain below the NAC for each type of land use per 23 CFR 772.J 7. The information will be provided within three months of the Record of Decision (ROD) publication.

SCDOT has completed this commitment. Therefore, no work is required of the CONTRACTOR.

12. During construction, powered construction equipment will not be operated during the traditional evening and/or sleeping hours within 150 feet of a noise-sensitive site, to be decided either by local ordinances and/or agreement with SCDOT.

Noise-sensitive land uses are defined as Activity Categories A and B listed in Table 1 of 23 CFR, Part 772, Noise Abatement Criteria (NAC) and in the FEIS, Section 3.5 (Part 1).

The CONTRACTOR shall comply with this commitment.

13. The CONTRACTOR(s) will be required to minimize possible water quality impacts through implementation of BMPs, reflecting policies contained in 23 CFR 650B and the Department’s Supplemental Specification on Erosion Control Measures (latest edition) and Supplemental Technical Specifications on Seeding (latest edition). Other measures including seeding, silt fences, sediment basins, etc. as appropriate will be implemented during construction to minimize impacts to water quality.

The CONTRACTOR shall comply with this commitment. CONTRACTOR’s performance of the requirements of Exhibit 4e, Hydraulic Design Criteria, will constitute compliance with this commitment.

14. Stormwater modeling will be completed for the final design of the Project. Stormwater runoff would be mitigated by discharging stormwater into appropriately designed BMP's before being released into receiving waters. During construction, the CONTRACTOR(s) will identify and avoid all point sources of fecal coliform as identified in Chapter 3, Section 3.6 of the FEIS.

Two point source facilities were identified at the I-20 crossing of the Saluda River in the FEIS: Woodland Utilities and Carolina Water Services. CONTRACTOR shall avoid impacts to these facilities.

The CONTRACTOR shall comply with this commitment.

15. A Section 401 State Water Quality Certification will be required for the overall project. SCDOT is responsible for obtaining the certification as part of the Joint 404/401 permit application process.

Any necessary permit modifications shall be the CONTRACTOR’s responsibility. The permit modifications shall be acquired in the name of SCDOT and all coordination shall be conducted through SCDOT. See Section 4.0 for detailed information on the permit modification process.

16. The CONTRACTOR(s) is responsible for development of a project specific SWPPP and for obtaining a Section 402 NPDES permit for the project prior to initiating land disturbing activities.

The CONTRACTOR shall comply with this commitment. The CONTRACTOR shall prepare the NPDES permit package as outlined in Exhibit 4e, Hydraulic Design Criteria and perform coordination with SCDHEC to obtain the permit. The coordination process shall include the SCDOT Stormwater Manager. The permit shall be acquired in the name of SCDOT and all coordination shall be conducted through SCDOT.

17. A State Navigable Waters permit will be required for construction over any navigable waterways (i.e., the Saluda River). The CONTRACTOR will be responsible for obtaining this permit.

For applicable construction phases, the CONTRACTOR shall comply with this commitment. The CONTRACTOR shall prepare the Navigable Waters permit package,

which is to include the SCDOT's Affidavit of Ownership found in Attachment B and perform coordination with SCDHEC to obtain the permit. The coordination process shall include the SCDOT's Design Build Environmental Coordinator. The SCDOT reviews, signs and submits the package to SCDHEC. The permit shall be acquired in the name of SCDOT and all coordination shall be conducted through SCDOT.

18. Impacts to jurisdictional waters will be permitted under a Department of the Army Section 404 permit from the U.S. Army Corps of Engineers (USACE). Based on preliminary design, it is anticipated that the proposed project will be permitted under an Individual USACE Permit (IP). SCDOT will provide the USACE with information regarding any proposed activities during the Section 404 permitting process. One permit would be obtained for the overall project. The required mitigation for this project will be provided through a Permittee Responsible Mitigation (PRM) site, developed in consultation with the USACE and other resource agencies.

SCDOT will be responsible for obtaining the initial Section 404/401 permit for the Project as defined in Section 4.0 and Article IX. Any necessary permit modifications would be the CONTRACTOR's responsibility. The permit modifications shall be acquired in the name of SCDOT and all coordination shall be conducted through SCDOT. See Section 4.0 for detailed information on the permit modification process.

19. Detailed hydraulic and hydrologic studies for each bridge crossing will be performed to determine the correct sizing of bridges and culverts. The project will be designed to be consistent with local floodplain development plans. Prior to construction activity in the area, coordination with Dominion Energy and Federal Energy Regulatory Commission (FERC) will be required for the Lower Saluda River floodway crossings due to its function as part of a hydroelectric facility.

The CONTRACTOR shall comply with this commitment.

20. The project will be designed in an effort to meet "No-Rise" requirements. In the event a "No-Rise" condition cannot be achieved, coordination with FEMA will require the preparation of a CLOMR (Conditional Letter of Map Revision) / LOMR (Letter of Map Revision) package for the encroachment. Where regulatory floodplains are defined, hydraulic structures will be designed to accommodate a 100-year (1% annual chance) flood. Where no regulatory floodplains are defined, culverts and bridges will be designed to accommodate a 50-year or greater magnitude flood event. Ongoing design efforts to minimize floodplain impacts will be coordinated with resource and regulatory agencies during the final design process.

The CONTRACTOR shall comply with this commitment. CONTRACTOR's performance of the requirements of Exhibit 4e Hydraulic Design Criteria will constitute compliance with this commitment.

21. Prior to construction, the selected CONTRACTOR(s) will send a set of final plans and request for floodplain management compliance to the local County Floodplain Administrator.

The CONTRACTOR shall comply with this commitment. CONTRACTOR's performance of the requirements of Exhibit 4e Hydraulic Design Criteria shall constitute compliance with this commitment; a separate plan is not required.

22. No substantial impacts to floodplain values are anticipated from the proposed project. If conditions change based on final design, additional measures will be evaluated to restore lost floodplain values.

No substantial impacts to floodplains are anticipated based on the Refined RPA design, which proposed floodplain crossings adjacent to existing structures or within existing transportation corridors; it also assumed proposed crossings would provide existing or improved flow conditions.

If the CONTRACTOR elects to construct the Project in a manner that is not consistent with the assumptions in the SCDOT prepared environmental documents, the CONTRACTOR shall be responsible for evaluating measures to restore lost floodplain value.

23. To mitigate for natural upland forested habitats, lost as a result of the project, SCDOT will plant trees (native species), as defined by the final design plans, within the rights-of-way adjacent to new or improved interchanges and roadways outside of required clear safety zones.

Impacts to areas providing significant wildlife habitat, such as river floodplains and other large riparian buffers, will be minimized to the extent practicable through avoidance and minimization design measures such as the use of appropriate BMP's.

Construction activities will be conducted within the disturbed footprint of the existing roadway and utility right-of-way to the maximum extent practicable.

SCDOT shall comply with this commitment.

24. To mitigate the temporary impacts to the Saluda Riverwalk Extension, SCDOT will notify the City of Columbia Parks and Recreation Department at least 48 hours in advance as to when the trail will be temporarily closed. SCDOT will also work closely with the Parks and Recreation Department to communicate the closing to trail users during construction. When construction is complete, the condition of the trail will be equal to existing conditions.

SCDOT will provide appropriate notice to local municipalities and/or trail groups for any temporary sidewalk or bicycle facility closures or detours.

The CONTRACTOR shall comply with this commitment by supplying SCDOT with the appropriate maintenance of traffic information and providing construction alert drafts no less than ten days prior to the start of any closure or change to traffic configuration due to construction to allow enough time for approvals and distribution in accordance with the public notice conditions of this Contract, including, Community and Public Relations Support Plan (Section 107) set forth in Exhibit 5.

EXHIBIT 8 – ENVIRONMENTAL CRITERIA

25. Prior to construction, the project CONTRACTOR will perform Phase II ESAs on the properties identified within the footprint, including the subject properties, and/or on the adjoining properties or the ROW. Ultimately, the Phase II ESAs will include environmental sample collection (e.g. soil, soil gas, and groundwater), specifically, in areas where a potential for disturbance of soil and/or groundwater exists. Asbestos Containing Material (ACM) and/or Lead Based Paint (LBP) testing will be assessed separately. Materials containing asbestos and lead-based paints will be managed and disposed of properly at an appropriate permitted facility to minimize impacts during the construction and cleanup. Activities will be monitored by a professional that is certified in the removal, handling and disposal of lead-based paint and/or asbestos-containing materials.

SCDOT will perform Phase II site assessments at the following locations included in the ROD: 2116 Broad River Rd (Tract 272); 2108 Broad River Road (Tract 273); 609 Giles Court (Tract 699); Jamil Road (Tract 654). SCDOT will perform both ACM and LBP investigations on each of the buildings located on the following tax map numbers in the following table:

TMS #	TMS #	TMS #
R04907-01-16	R06014-10-01	002834-01-022
R04907-01-17	R06013-01-26	002834-01-023
002899-06-009	R05916-01-09	002898-02-002

R06014-06-05	R06014-10-03	003697-04-002
R06014-03-10	R06014-10-02	003697-02-049

For any other property/parcel acquired by SCDOT, Phase II Environmental Site Assessments, if applicable, and ACM/LBP surveys, if structures are present, will be the responsibility of the CONTRACTOR.

26. A spill prevention, control, and countermeasures (SPCC) plan will be prepared in accordance with 40 CFR 112, for the handling of oils or oil-based products during construction to prevent a discharge of oil into navigable waters.

The CONTRACTOR shall comply with this commitment.

27. A hazardous waste management plan will be prepared for the handling of hazardous materials during construction, and an on-site health and safety plan will be developed for construction activities to protect human health (i.e. workers, residents, recreation and trespassers) and the environment within/proximate to the site.

The hazardous waste management plan will also state that disposal of waste materials will be disposed of in approved landfills.

The CONTRACTOR shall comply with this commitment.

28. If avoidance of hazardous materials is not a viable alternative and soils that appear to be contaminated are encountered during construction, the South Carolina Department of Health and Environmental Control (SCDHEC) will be informed immediately. Hazardous materials will be tested and removed and/or treated in accordance with the United States Environmental Protection Agency and the SCDHEC requirements, if necessary. SCDHEC Hazardous Waste Treatment, Storage, and Disposal compliance staff can be contacted at 803-898-0290.

The CONTRACTOR shall comply with this commitment.

29. During the construction phase of the project, the CONTRACTOR and subcontractors must notify their workers to watch for the presence of any prehistoric or historic remains, including but not limited to arrowheads, pottery, ceramics, flakes, bones, graves, gravestones, or brick concentrations. If any such remains are encountered, the Construction Manager for Mega Projects would be immediately notified and all work in the vicinity of the discovered materials and site work shall cease until the SCDOT Chief Archaeologist directs otherwise. SCDOT Chief Archaeologist, Tracy Martin, can be contacted at 803-737-6371.

The CONTRACTOR shall comply with this commitment.

30. An archaeological professional will be present during any ground disturbing activities related to Site 38LX212 (Phase 1). Additionally, sites 38RD140 (adjacent to Phase 1), 38RD1175, and 38RD1176 will be protected from indirect effects, including borrow sites and equipment staging. Sites will be clearly marked in the field using orange construction fencing prior to beginning construction activities in the vicinity of the resources.

The SCDOT will provide the archaeological professional. CONTRACTOR shall comply with this commitment.

31. The Saluda Canal (Site 38RD59) would be clearly plotted on all construction plans. SCDOT has reduced ROW widths in the vicinity of the canal to avoid impacts to the canal during construction & any future maintenance activities along the ROW. A 25-foot buffer will be maintained around the canal for the majority of the resource. This zone would be clearly marked in the field using orange fencing during construction, and all ground disturbance and construction staging activities would be conducted outside of this buffer in order to avoid all possible impacts to the resource. SCDOT proposes to revise the commitment of a 25-foot buffer for a distance of approximately 700 feet along the proposed ramp to allow room for temporary construction access & equipment near I-26 Ramp C. To protect the boundary of the canal at this location, the following will be added to the contract as commitments:

- Prior to construction activities orange protective fencing will be installed along the edge of boundary of the Saluda Canal Historic District in areas that will maintain the original buffer as well as those areas where the buffer has been requested to be reduced between the two drainages and for a length to the south of the southernmost drainage.
- Prior to construction activities silt fencing will be installed along the edge of SCDOT right of way to prevent runoff.
- For areas along the identified Saluda Canal located along the I-26 Ramp C beginning Station 5412+50 and ending Station 5419+50 clearing will be allowable to the right of way but grubbing will be limited to within a distance of 5-feet inside of the right of way. Grubbing activities within the 5-foot buffer will require approval from SCDOT prior to occurring.
- During land clearing activities prior to construction, an archaeologist will be present at all times to ensure that these activities undertaken close to the fencing do not damage the canal.
- During construction, an archaeologist will visit the construction site twice a week to ensure that no activities have crossed over the protective fencing. Any observations during these visits will be recorded in an inspection log that will be made available to the SHPO.
- As soon as an inadvertent impact is discovered, such as a previously unidentified cultural resource, archaeological feature, or artifact, construction in that area will stop immediately until an onsite consultation with SCDOT archaeologists and SHPO can determine the best strategies for avoiding, minimizing, or mitigating adverse effects upon the resource.

The CONTRACTOR shall comply with this commitment.

32. The CONTRACTOR(s) will ensure that all construction equipment is properly tuned and maintained. Idling time will be minimized to save fuel and emissions.

The CONTRACTOR shall comply with this commitment.

33. Water will be applied to control dust as needed to prevent dust impacts off site. There will be no open burning of removed vegetation. Vegetation will be chipped or delivered to waste energy facilities.

The CONTRACTOR shall comply with this commitment.

34. The federal Migratory Bird Treaty Act, 16 USC § 703-711, states that it is unlawful to pursue, hunt, take, capture or kill; attempt to take, capture or kill; possess, offer to or sell, barter, purchase, deliver or cause to be shipped, exported, imported, transported, carried or received any migratory bird, part, nest, egg or product, manufactured or not. The South Carolina Department of Transportation (SCDOT) will comply with the Migratory Bird Treaty Act of 1918 in regard to the avoidance of taking of individual migratory birds and the destruction of their active nests.

The CONTRACTOR will notify the Construction Manager for Mega Projects at least four (4) weeks prior to construction/demolition/maintenance of bridges and box culverts. The Construction Manager for Mega Projects will coordinate with SCDOT Environmental Services Office (ESO), Compliance Division, to determine if there are any active birds using the structure. SCDOT will be responsible for the removal/management of any active bird nests.

The CONTRACTOR shall comply with this commitment. The CONTRACTOR is advised that this commitment applies to existing, temporary, and new structures including but not limited to bridges, box culverts, and large diameter pipes.

35. Potential borrow areas to be used for fill dirt for the project will be field reviewed and assessed for the presence of any jurisdictional features, and BMPs will be applied prior to disturbance to avoid and/or minimize erosion and runoff of sediments.

The CONTRACTOR shall comply with this commitment by following procedures outlined in SCDOT Engineering Directive 30 addressing Borrow Pit Location and Monitoring.

36. Construction operations will be scheduled for off-peak traffic hours when reasonable/feasible.

The CONTRACTOR shall comply with this commitment.

37. A traffic maintenance plan will be developed prior to construction initiation to minimize interference to traffic flow from construction equipment and activities.

The CONTRACTOR shall comply with this commitment. The requirements of Exhibit 4d (Traffic Criteria) and the contract-required Transportation Management Plan will constitute compliance with this commitment; a separate plan is not required.

38. After SCDOT acquisition, wetland delineations will be performed on Parcels 270, 187 and 316; archaeological investigations will be conducted on Parcels 187 and 316.

SCDOT will comply with the commitment.

3. PERMIT CONDITIONS

The USACE Individual Permit and resulting Contractor responsibilities will be issued in an addendum.

4. SCDOT'S USACE INDIVIDUAL PERMIT MODIFICATION PROCESS

Per conditions of the US Army Corps of Engineers (USACE) Individual Permit (IP) SAC-2015-01080, dated September ##, 2020, (IP) a modification to the IP will be required once the CONTRACTOR has developed a design. The CONTRACTOR shall be responsible for permit modification preparation, acquisition, and compliance. CONTRACTOR's proposed design shall reflect stream and wetland impacts up to but not exceeding those presented in the

SCDOT's USACE Section 404 Individual Permit, dated September ##, 2020. If the CONTRACTOR exceeds permitted impacts, CONTRACTOR shall be responsible for submitting all permit modifications to the USACE for approval. All modification requests shall be coordinated through the SCDOT Environmental Services Office (ESO). The CONTRACTOR shall follow the modification process outlined as follows:

1. The CONTRACTOR shall completely update the Impacts and Mitigation Spreadsheet (Spreadsheet) based on CONTRACTOR's projected impacts resulting from its design. The Spreadsheet is part of the SCDOT's USACE Section 404 Individual Permit, dated September ##, 2020 and an editable copy of the Spreadsheet is provided under the Environmental Section of Attachment B. CONTRACTOR is responsible for showing all individual feature impacts on the Spreadsheet. Impacts shall not exceed maximum credits for stream and wetlands identified in Phase 1 Credits available credits.
2. In the Spreadsheet, increases in impacts shall be depicted using **red** text while reductions shall be depicted using **green** text. It is anticipated that totals shall decrease from the originally calculated impacts.
3. The Contractor shall provide the required hydraulic and hydrologic (H&H) data and information as described below. Contractor shall be responsible for complying with each element in coordination with SCDOT. The below information will be governed by special conditions in the final approved IP and subject to USACE review and approval

For areas where this Project will cause an increase upon Water Surface Elevation (WSE) that result in water outside of the permittee's Project right of way from the analyzed storm events, the permittee shall provide details of notification/coordination with each property owner.

CONTRACTOR shall be responsible for notification and coordination with property owners.

For each property affected by an increase in post-development WSE, the permittee shall notify the affected property owner(s) and will provide the following details to them: property location, details of the impact to the property, area of extent ponded water (map), and water surface elevation information including the increase over existing conditions and duration of impact to each affected property.

- In areas where structures, as defined by FEMA (a structure is a walled and roofed building, including a gas or liquid storage tank, that is principally above ground, as well as a manufactured home. The terms "structure" and "building" are interchangeable in the National Flood Insurance Program (NFIP)), are impacted by an increase in post-development WSE, the permittee will secure a signed flowage easement from the property owner.
- In areas where structures are not impacted by an increase in post-development WSE, the permittee shall provide the Corps copies of the written certified mail notification to affected property owner(s), details of the effect of the increase in post-development WSE, and acknowledgement of receipt (copy signed received certified mail receipt).

CONTRACTOR shall be responsible for identifying affected properties and preparing and providing information outlined in the condition as prescribed to the property owners. CONTRACTOR shall provide copies of all documentation generated for complying with the Special Condition to SCDOT prior to submitting to the USACE. CONTRACTOR shall provide the USACE acknowledgement of receipts as required. SCDOT will secure signed flowage easement which is Additional Right of Way as prescribed by Article VIII of the Agreement.

If these affected areas are also within Special Flood Hazard Area or are located within mapped areas on FIRM mapping, SCDOT will provide a letter of concurrence from communities/Local Floodplain Manager or FEMA as necessary.

CONTRACTOR shall comply with this condition.

4. The CONTRACTOR shall update permit drawings according to its projected impacts as a result of its design. The CONTRACTOR shall depict design and impact changes in **red** on all applicable permit drawings sheets. Additionally, the CONTRACTOR shall include an updated revision date on **all** drawing sheets even if no changes in impacts occurred on those sheets. These requirements shall apply to the **CURRENT** modifications request. Previous revisions shall be in black.
5. The CONTRACTOR shall provide SCDOT with a schedule for the IP modification preparation, delivery, and anticipated need by date. The schedule shall include timeframes for internal reviews, comment responses as well as agency reviews and comment responses. Because this is a modification of the approved IP, the CONTRACTOR shall take into account appropriate review timeframes in its schedule. SCDOT will review and submit comments or approval to the CONTRACTOR within two weeks of all CONTRACTOR submittals pertaining to the IP. It is anticipated that there will be at least two pre-application meetings with USACE prior to permit modification submittal. The meetings should cover items 1-3 listed above. The ESO will coordinate with the USACE on all submittals, meetings, and provide updates on behalf of the CONTRACTOR. All coordination with USACE should be initiated by SCDOT.
6. The IP modification submittal shall include a status report of the construction and monitoring of the PRM sites which is being carried out by SCDOT. A summary of actions ongoing and completed shall be provided by the ESO to the CONTRACTOR for inclusion in the modification submittal package.

5. SUSTAINABILITY

SCDOT is pursuing **ENVISION V3** verification and **INVEST PROGRAM** certification for the Project. SCDOT has identified the Envision v3 credits for the Project in Attachment B: Sustainability Action Plan. The CONTRACTOR shall incorporate the requirements to obtain these credits and provide documentation for credits, as required in the Envision Guidance Manual: <https://sustainableinfrastructure.org/wp-content/uploads/EnvisionV3.9.7.2018.pdf>, related to the CONTRACTOR's scope of work. If CONTRACTOR is not able to meet the criteria and documentation requirements to obtain the credits, CONTRACTOR shall submit a

Contract Change Request in order to obtain approval from SCDOT to modify the Contract requirements.

5.1 Sustainability Kick-Off Meeting

CONTRACTOR's team shall attend a Sustainability Kick-Off Meeting specific to the project's sustainability, INVEST and Envision v3 goals and credit requirements.

Sustainability Kick-Off Meeting will be included in the first Project partnering meetings scheduled by SCDOT after award of the contract.

CONTRACTOR shall bring a revised version of the Sustainability Action Plan located in Attachment B to the Sustainability Kick-Off Meeting to be reviewed and discussed. CONTRACTOR's revisions shall reflect the name of the CONTRACTOR's responsible person, due date CONTRACTOR shall provide documentation, and additional documentation needed to achieve credits.

Documentation necessary to meet Envision v3 credit requirements shall be confirmed during the Kick-Off Meeting and shall be made part of the Final Sustainability Action Plan.

5.2 Sustainability Action Plan

The final Sustainability Action Plan shall provide a description of activities related to accomplishing Project Envision v3 requirements, including construction practices and necessary documentation for Envision v3 credits that involve CONTRACTOR actions.

The Sustainability Action Plan shall also include the following:

- Name of CONTRACTOR's sustainability point of contact, individual(s) responsible for Envision v3 and INVEST coordination with SCDOT and providing required documentation (CONTRACTOR Team).
- The sustainability point of contact should be familiar with third-party rating systems and implementation of sustainable design. An ENV SP or sustainability professional is preferred.
- CONTRACTOR team comments.

The Final Sustainability Action Plan shall be submitted to SCDOT 45 calendar days after NTP.

Some Envision v3 credits are inherent in the CONTRACTOR's design and require no further submittal or documentation. For these credits, the CONTRACTOR team shall notify the SCDOT in advance of selection of any specified material or use of any permissible construction methods. Some Envision credits involve material selection and are identified within the appropriate technical specifications.

All work necessary to achieve and document Envision v3 credits, as identified in final Sustainability Action Plan, shall be Contract requirements and shall be incorporated in

the CONTRACTOR's design of the Project in compliance with the Envision Guidance Manual.

5.3 ENVISION PROGRAM MANAGEMENT AND COORDINATION

CONTRACTOR team shall:

- Carefully review the contract for Envision v3 requirements, coordinate work of trades, subcontractors, and suppliers; instruct workers related to Envision issues; and oversee Project Envision v3 implementation.
- Assemble and retain electronic records to document meeting Envision v3 requirements.
- Make records available for review by SCDOT or FHWA.
- Provide related plans, reports and documentation according to specified requirements and schedule.
- Provide input to SCDOT as SCDOT prepares the Envision v3 verification application for submission to Institute for Sustainable Infrastructure (ISI).
- CONTRACTOR Team shall respond to questions and requests from SCDOT and/or SCDOT's Representative regarding Envision v3 credits for which the CONTRACTOR Team provides documentation or that depend on product selection or product qualities, until ISI has authenticated the Project's Envision v3 verification application.

5.4 MEETINGS

Include Envision v3 update as a topic in the construction progress meeting agendas.

5.5 COMPLETION OF DOCUMENTATION

CONTRACTOR team shall be responsible for providing required documentation for Envision v3 credits to SCDOT for submittal to ISI for Envision v3 verification at or after 95% design completion and at or after 95% construction completion.

After SCDOT has submitted the application to ISI for verification, the CONTRACTOR team shall be responsible for responding to all comments received by SCDOT from ISI within the required timeframe.

CONTRACTOR team shall keep SCDOT and SCDOT's Representative apprised of progress during each step of the documentation completion process.
